## Environmental Concerns

I have always thought that people who live in Colorado are special. Colorado has been known for its clean mountain air and water. People who live here are especially concerned about the environment. This was apparent in the voter turn down of the Winter Olympics several years ago. Most people have supported increasing wilderness areas and preserving the raw beauty of our mountains.

Another trait of the "typical Coloradoan" is that he will not give up

his automobile. We have developed the Southern California attitude that we must use our automobiles for all travel with no thought of using public transportation. Consequently we have seen the sky in Colorado take on a brown haze from air pollution. This is particularly true along the Eastern slope but is also apparent up through the Eagle River Valley in the mountains.

Realistically I don't believe that the automobile is going to be taken away from the people of Colorado. But I do think the answer will have to come through strict pollution regulations and eventually through finding a source of energy other than the internal combustion engine.

Our responsibility as a medical society would seem to entail the continued monitoring of air pollution and the immediate reporting of environmentally related illnesses before they become a serious health problem. I realize some of our pollutant levels are improving but anyone driving into Denver will realize we have a long way to go.

Another form of air pollution is related to cigarette smoking. The most preventable form of cancer these days is lung cancer caused by smoking. It would seem that the medical society should continue to be active in all forms of antismoking programs.

It is quite apparent to me that a smoker needs a great incentive to stop smoking. I would suggest that we follow the example of some industries who have offered their employees a financial incentive to stop smoking. This would work as follows: (1) give your smoking employee \$100.00 if he stops for one month; (2) give him another \$100.00 if he does not smoke another two

months; (3) give him \$100.00 every three months for the remainder of the year. At the end of one year it would have cost you \$500.00 and your employee should have broken the habit. Studies have shown that this money will be recovered through the employee's improved health and productivity.

Wouldn't it be great if all health care providers took up this program? Hospitals (some of the biggest employers in most areas) could really set an example for the general public if they had this incentive program. Most physicians' offices discourage smoking, yet have valuable staff members who smoke. Maybe this program would work in your office and you could all benefit.

Hazardous waste control in this state is another environmental concern. With the closing of the Lowry landfill site this past year, there is no operational hazardous waste disposal site in Colorado today. This in itself is creating a health hazard by forcing industries to store wastes temporarily on their property, ship them out of state or, of more concern to the public, to dispose of them illegally in the rivers of Colorado.

The Colorado Legislature during this session will be charged with developing a solution to the hazardous waste problem. The Colorado Medical Society will be active in support of a safe in-state hazardous waste control facility. I encourage all physicians to communicate this to your state legislators so the problem can be solved.

As you can see, Colorado has many environmental concerns. I encourage all physicians to continue their efforts to keep Colorado safe and beautiful.

## ROCKY MOUNTAIN MEDICAL JOURNAL

Copies are still available of the special Centennial Year Book edition of the Rocky Mountain Medical Journal. This edition commemorates the 100th anniversary of the University of Colorado School of Medicine.

Take a look back through the school's colorful history and a look forward into the next century of one of the United States' outstanding medical teaching and research institutions.

Cost is \$8.40 per copy, prepaid, including tax, postage and handling. For more information contact:

# Looking Forward to Positive Action

by John A. Whitesel, MD, President-Elect, CMS

Dear Friends:

The Colorado Medical Society is the only organization that can represent you, the practicing physician, by addressing the dynamic changes and problems facing medicine in Colorado today; the intrusion of hospitals into the practice of medicine; the prospective hospital payment which will soon involve the physician; the incursion of business and government agencies into the peer review system. The times demand that you take charge of your future through the **positive action** of involvement *now*! This is the first of several efforts to bring the Colorado Medical Society to you, the individual member, increasing your involvement and, thus, the viability of our organization which, in turn, is vital in its service to you. This is a standing charge to the society's officers. CMS President Dr. Merlin Otteman is continuing this effort through his goal of communication to the membership and visitations to component societies. Your involvement is directly proportional to the strength of our society.

This is your society, and I am going to make every effort to facilitate your participation and enable you to have a direct input into the society's direction, projects, and decision-making process. In an effort to accomplish this goal, we must start now. The President's Planning Session will be held in June, 1983, and although it seems remote at this time, it will soon be upon us. Your first opportunity to participate will be to evaluate the 83-84 program suggestions below, make a personal commitment to involve yourself in an area of your interest, discuss your ideas with other members and then introduce them into the agenda of the Planning Session by contacting me at the State Society office. Your suggestions are needed to develop and shape the program for this planning session and, thus, the route that we take in 1983-84. In this fashion, we can gather ideas from over the entire state and blend many of them into policies and projects at the June meeting, which will answer the challenges of today and prepare for

those of tomorrow.

The able leadership of prior years has met and is solving such problems as medical liability insurance, a permanent headquarters, and unified grievance system, to name a few. I would like to pursue the policy of our society, reaffirmed at the 81-82 President's Planning Session, "to establish and maintain an

organization whose aim is to improve the health care and medical services to the people of Colorado." This goal is composed of medical education, improving the quality and availability of medical care while controlling or reducing its costs, and most important, service to our fellow man.

The following outline elaborates on these ideas of which you may have refinements or entirely different thoughts:

## 83-84 Program Suggestions

### I. Education

- A. Continuing medical education (physicians, nurses, hospital administrators, insurance companies, paramedical personnel and patients, etc.), delivery, stimulating new approaches, recognizing new needs.
- B. Medical center support and enhancement
  - 1. Teach
  - 2. Participate in programs.
  - 3. Increase funds.
  - 4. Continue policy of obtaining quality faculty.
- C. Peer Review — educational, quality aspects, utilization, etc. Involving medical providers and third parties (as in I-A).
- D. Cost control and reduction — recognize what costs patients and third party payers are supporting in hospital and outpatient settings in order to eliminate waste and effectively utilize the dollar (overlaps with II).
- E. Instruction regarding types of health care delivery systems both in place and contemplated in order to assess the impact on the future of medicine.

### II. Cost containment and reduction

- A. Peer review (hospital and ambulatory)
- B. Discount club for senior citizens and low-income groups.
- C. Insurance structure review for influence on cost (deductables, co-insurance, incentive, selective policies, etc.). The business and labor dialogue and interaction (change insurance policies — no frill coverage, decreased demand).
- D. Hospital administrative cooperation (budget restraints, hold down expansion in personnel as well as expenditures not related to direct health care support).
- E. Industries supplying medicine and its delivery systems commit to price stabilization or reduction of prices.
- F. Legislative efforts.

### III. Quality and availability of medical care — will be covered and influenced by I and II.

- A. Licensure — renewal, recertification, opportunities for increased certification.
- B. System entrance process for patients in our state — satisfactory?
- C. Legislative efforts.

### IV. Public Service.

- A. Volunteer care on a regular basis for indigent (city - rural center, private office, hospital, etc.).
- B. Public service society — roster available to which the needy can be referred for treatment, preventive care, instruction, appliances, etc.
- C. Discount club for needy and elderly on low, fixed income.
- D. Volunteer time on teaching and clinical service at medical center, Denver General Hospital, county hospitals, etc.

The outline is a starting point in our effort to continue the Society policy of health care and medical services for the citizens of Colorado. You may have additions or different approaches to the areas of the outline that will enhance our program; therefore, select your region of concern, communicate your ideas and begin to make these ideas happen! Our State Society Councils and Committees, component society committees and individual efforts have recognized and addressed many of these areas. They are actively working on them and need your help. They will welcome your participation. Pick a committee of your state or local society which deals with your interest and make a commitment to participate and do something positive about this situation. Your commitment need not be extensive, but with such from each of our members, a great resource will be mobilized. The result will be a quantum leap in our activities, visibility and impact on the quality of health care and medical services in Colorado.

In order to facilitate your efforts, I am going to work with the chairperson of various councils and committees to allow anyone with interest in that council or committee's area to receive committee literature on that

*John A. Whitesel, MD  
CMS President-elect*

particular subject and participate in discussions when recognized. Society members have always been welcome at council and committee meetings and their participation valued. It is appropriate that this open invitation is again emphasized. If time, distance, or other commitments prevent you from attending, you will have the privilege of having your comments read into the discussion on a particular agenda item.

I, therefore, offer you an oppor-

tunity to actively participate in the direction and accomplishments of your state society. It is up to you to make the commitment for **positive action** in 1983-1984. Decide upon your area of involvement and begin recording your ideas and communicating them to me for their placement on the program of the President's Planning Session next June.

I am looking forward to working with you in a challenging and productive year in 1983-1984.

## Medicaid Physician Advisory Panel Announced

In response to a recent request from Governor Lamm, the Colorado Medical Society recently submitted the names of eight physicians to serve on an advisory panel to assist in the development and implementation of a primary care case management program within the Medicaid system. Each of the physicians had been nominated by their local or specialty medical societies. The number of candidates proposed exceeded the number requested by Governor Lamm, and the eight physicians were selected with an attempt to provide an equitable distribution across geographic and specialty lines.

The establishment of a primary care case management program within the Medical Assistance division of the State Department of Social Services was mandated by the fiscal year 1982-83 long bill. Similar approaches are currently underway in several other states, including Michigan and Utah. Under this concept, Medicaid recipients choose a primary care physician from a list of doctors who have indicated a willingness to participate and who agree to serve as the coordinator for all that recipient's medical needs. It is anticipated that such an approach will improve the physician-patient relationship and lower the incidence of "doctor shopping" and inappropriate emergency room use for primary care. The details of the program will be developed in conjunction with strong input from the medical community through the

## Grievance Of The Month

Dr. Head, Chief of Staff at a small rural hospital, called the CMS office on a Monday morning, stating that his hospital was having trouble with the quality of care and the ethics of one physician. Since the medical staff was very small and close, they had been accused of not being able to give a fair hearing of the doctor's situation. Could the CMS Grievance Committee help them?

Dr. Head was advised to formulate a letter to CMS requesting a hearing panel, and get the hospital administration, board of directors and medical staff all to agree to an outside hearing panel and sign the letter of request.

A week later the letter was received at the CMS office. Three physicians were recruited from

areas distant from the community in question and a one day on-site visit to the community was arranged.

The three man committee found some surgical areas of deficiency, but pronounced the doctor in question capable in other areas of his practice. A letter was drafted stating specific areas of deficiencies, and copies were sent to the doctor, the administrator, the chief of staff and the hospital board of directors.

**Comment:** Some local issues, especially in small communities, are too "hot" for the community to handle. A professional, unbiased, outside panel of physicians may be useful. The CMS Grievance Committee is a possible source for this outside review.

Physician Advisory Council.

The Physicians Advisory Council has held several meetings to date and has begun to define a number of the issues and concepts that the proposed program entails. While the first meeting was spent primarily in discussion of the nature of the program, its potential for effecting savings in the Medicaid program and a review of the impetus for its development in Colorado, subsequent meetings have addressed specific topics. These topics have included delineating who would be eligible to provide services as a Primary Care Provider (PCP), incentives for physician participation in the program, physician reimbursement under Medicaid and comparative data on Medicaid utilization in Colorado and other states.

The time frame for implementation of the program is quite short and the Physician Advisory Council will be meeting twice a month over the next several months to meet the proposed target of an operating pilot program to be in place by late February or early March in several Colorado communities.

The eight physicians nominated from the Colorado Medical Society, together with two appointed from the Colorado Osteopathic Society and one from Denver Health and Hospitals, are listed below. Specific information on the recommendations and decisions of the Physician Advisory Council will be published in subsequent issues of **Colorado Medicine**.

## Relabeling Pharmaceutical Samples

*The following is a reprint of a letter to Frederick A. Lewis, Jr., MD, Immediate Past President of the Colorado Medical Society, from the Col-*

*orado State Board of Pharmacy, regarding the relabeling of pharmaceutical samples.*

Dear Dr. Lewis:

It has come to the attention of the Colorado State Board of Pharmacy that there may be some misunderstanding relevant to 12-22-126(1)(m) of the statute which states that it is an unlawful act to dispense any drug without complying with the labeling, drug identification and container requirements imposed by law.

A practitioner who receives samples or medications in the manufacturer's package and then passes that package on to the consumer would not be acting contrary to the law as the Board of Pharmacy interprets it. It probably would be

good practice if the patient's name, directions and practitioner's name were to appear on the sample package.

The Board does feel that a practitioner who repackages from large stock bottles and places these drugs in a container that does not meet the necessary labeling requirements would be acting contrary to the act.

If there is any problem or any confusion in this area, I will be most happy to discuss this matter with you or a representative from your society.

for the Colorado State  
Board of Pharmacy

D. L. Simmons  
Administrator

## Medicaid Third Party Recoveries:

### *A Colorado Medical Society Exchange with the Department of Social Services*

*The following are reprints of a letter from Merlin G. Otteman, MD, President of CMS, to Ruben A. Valdez, Executive Director of the Colorado State Department of Social Services and Mr. Valdez' response.*

Mr. Ruben A. Valdez  
Executive Director  
Department of Social Services

Dear Mr. Valdez:

This letter is for the purpose of expressing our strong dissatisfaction with recent actions of the Department of Social Services regarding third party recoveries in the Medicaid program.

While we support the intent of the regulations in ensuring that other insurance resources are exhausted before public funds are utilized to cover the costs of medical care, we vigorously protest the implementation of such regulations on a retroactive basis. Such a move places an unfair and extremely cumbersome administrative burden upon the physicians who have provided services to Medicaid recipients. Furthermore, nothing in the notification information concerning the recovery system provided any forewarning that the regulations would be applied retroactively.

The physicians in Colorado have demonstrated their willingness to work closely and cooperatively with the Department addressing the needs and problems within the Medicaid program. Such coopera-

tion is jeopardized, however, when the Department undertakes to implement procedures which significantly, and potentially adversely, affect physicians without clearly communicating the intent to apply such provisions on a retroactive basis.

Very truly yours,  
Merlin G. Otteman, MD  
President  
Colorado Medical Society

Merlin G. Otteman, MD  
President  
Colorado Medical Society

Dear Dr. Otteman:

Before automating our Third Party Recovery Systems on August 1, 1982, this Department manually tested the feasibility of retroactive recovery. In a nine month period (October 1981 through June 1982) we recovered funds in excess of three quarters of a million dollars. An additional \$150,000.00 has been recovered for the first three months of the current fiscal year, confirming that retroactive billing to insurance carriers is both feasible and cost productive. Third party carriers often reimburse medical services at a rate

higher than our allowed Medicaid payment, benefiting not only the State but the provider of service as well.

The Department recognizes the burden placed on providers in the initial stages of such a project. However, owing to current financial and budgetary constraints, a larger and more cumbersome burden will be placed on the public at large by our failure to implement such procedures as retroactive recovery. The savings attributable to third party recovery efforts will directly affect the Colorado Medicaid Program budget thereby allowing us to forestall or reduce further cuts in health care services or in reimbursement levels to Medicaid providers.

As we explained in our letter which accompanied our July 9, 1982, Medicaid Bulletin regarding third party resources, this Agency is required by Federal law to make every effort, including retroactive recovery, to insure that all other insurance resources are exhausted before public funds are expended for the cost of medical care. Failure to make these efforts could result in the loss of our 50% Federal matching funds, a move which could have disastrous effects on the quality of health care offered to those in need in the State of Colorado.

Verified information concerning a Medicaid recipient's third party coverage is not always available to the State agencies prior to a provider's billing the Medicaid program. Our response to this problem has been two-fold: (1) in July, 1982 we began printing indicators of possible (non-verified) third party health insurance directly on the Medicaid Authorization Card (MAC), and (1) we have always required providers (via the Colorado Medicaid Provider's Manual) to query recipients about the availability of third party resources prior to rendering service. In spite of these efforts, some health coverage information is discovered only after Medicaid has made payment.

Our automated Third Party Recovery System is programmed to deny/retract Medicaid payments only after our third party resource staff has verified specific claims coverage with the insuring com-

*L. to R., Colorado Medical Society Director, Robert F. Linnemeyer, MD of Grand Junction; Montrose County Sheriff Thomas Gilmore, receiving the AMA/CMS Jail Health Care Stands Accreditation certificate from Merlin G. Otteman, MD, CMS President; John V. Buglewicz, MD, of Florence, CO, Chairman, Committee on Medical Care in Correctional Institutions and Chris Wilson, CMS Jail Health Care Project Coordinator. The certificate was presented to Sheriff Gilmore on December 2, 1982, at the CMS offices in Denver.*

*L. to R., Becky Clark, Head Nurse, Weld County Jail; John Buglewicz, MD, Chairman, Committee on Medical Care in Correctional Institutions; Weld County Sheriff Harold Andrews; Weld County Sheriff's Captain Mike Metzger; Merlin G. Otteman, MD, CMS President; Thomas Flower, DO, Weld County Jail physician; Chris Wilson, Colorado Medical Society Jail Health Care Project Coordinator and Richert E. Quinn, Jr., MD, CMS Director representing Weld County. Dr. Otteman presented Sheriff Andrews and his jail staff with the AMA/CMS Jail Health Care Standards Accreditation certificate on December 2, 1982, at the CMS Denver offices.*

*L. to R., Colorado Medical Society President Merlin G. Otteman; Denver Mayor William H. McNichols, Jr. and Denver City and County Jail Under-sheriff John Simonet. Dr. Otteman presented Mayor McNichols and Mr. Simonet with the AMA/CMS Jail Health Care Standards Accreditation certificate on November 23, 1982 at a Denver City Council meeting.*

pany. In retracting payment, the information supplied to providers concerning third party coverage, i.e., policy number, names, payable benefits and billing addresses, has been checked and verified by the State in order to aid providers in rebilling their claims.

The Third Party Resources staff are presently involved in devising systems whereby more health insurance information will be made available both to the Medicaid Management Information System (MMIS) and to providers enabling us to employ less and less retroactive recovery in the future. Our long range goal is to verify and to make available to providers all existing third party resource information on all recipients at the time the MAC card is presented for health care. This goal can be reached only through our continued mutual cooperation and support.

Sincerely,  
Ruben A. Valdez  
Executive Director

Department of Social Services

### THIS IS YOUR LAST OPPORTUNITY

to receive the Rocky Mountain Medical Journal. Effective with the Centennial Year-Book edition of RMMJ, commemorating the 100th Anniversary of the University of Colorado School of Medicine, marks the final publication of this regional medical journal.

"Superb, timely" scientific medical articles and an "enjoyable recounting" of the first 100 years of medical education in Colorado, combined with Colorado Medical Society/CU School of Medicine past, present and future.

Send your check or money order today to: 6825 E. Tennessee, Bldg #2, Denver, 80224. ATTN: Centennial Year-Book.

## Help Available to Impaired Physicians

If you know of a colleague who has problems with drug or alcohol dependency, or if you think you may have a problem, talk to one of the members of the CMS Physician Health and Rehabilitation Committee. The chairman, John S. Avery, MD, may be reached by calling his office in Boulder, 440-3088.

The other members of the committee are:

Barry R. Berns, MD, Windsor, 686-7611  
Edmund Casper, MD, Denver, 893-7377  
Telford A. Davis, MD, Durango, 259-0094  
Franklyn M. Newmark, MD, Lakewood, 238-8719  
David R. Rice, MD, Aurora, 343-4655  
Richard E. Troy, MD, Grand Junction, 242-7697  
Paul T. Yoder, MD, La Junta, 384-8766  
Lawrence E. Austin, MD, Pueblo, 542-5250  
N. Kenneth Furlong, MD, Englewood, 789-7928

The Colorado Medical Society has had an impaired physician program for several years, at the direction of the CMS House of Delegates. The program is designed to assist physicians to confront their problems and find help. Physicians, family members and others also may gain access to the program by contacting the staff of the Division of Professional Relations and Medical Service at the CMS office in Denver, 321-8590. Physicians wishing to assist with the program are urged to contact the committee by calling 321-8590.

## scanner

A newsletter published for the leadership of the Colorado Medical Society,  
published and mailed following the Board of Directors meeting on December 2, 1982.

At the December 2 meeting of the CMS Board of Directors the Board:

### Colorado Medical Foundation Trust

— **Approved** disbursement of approximately \$4,000 in funds from the Colorado Medical Foundation Trust to the Achievement Rewards for College Scientists (for medical students) and the Colorado Health Careers Council.

### Poison Control WATS Line

— **Approved** supporting the continuation of the WATS line to the Poison Control Center and referred to the Council on Legislation.

### CMS to be "Friend of the Court" in Malpractice Case

— **Directed** the CMS Legal Counsel to file a "Friend of the Court" brief on behalf of the Society in a malpractice suit pending before the Colorado Supreme Court. The case is one in which the constitutionality of the two-year statute of limitations on medical malpractice is being challenged.

### New CMS Member Insurance Plan

— **Approved** a new group insurance concept for CMS members. The Board authorized the CMS President to appoint a member Insurance Benefits Committee to work with the new insurance brokers to develop, market and manage all CMS member insurance plans (excluding professional liability insurance), e.g. health, life, accident and disability.

### BME Hearings Recommendation

— **Approved** CMS support of an El Paso County Medical Society to the Colorado Board of Medical Examiners that mechanisms be developed so that the hearings will take place in a more "timely" manner.

### Jail Health Care Project

— **Approved** continuation of the Colorado Jail Health Care Project through June 30, 1983.

### Legislation

— **Supported** the Council on Legislation's position to *not support* certification of physicians' assistants.

— **Approved** CMS not pursuing any further efforts to change the existing legislation regarding re-labeling of prescription drug samples. (**Note:** An opinion from the Pharmacy Board will be published in a forthcoming issue of *Colorado Medicine*.)

— **Referred** proposed legislation regarding Workers' Compensation to the Council on Legislation.

— **Approved** the concept of the Medical Indigency Bill as drafted by the Denver Medical Society and referred to the Council on Legislation.

— **Approved** implementation of primary care physician case management system, provided there is significant physician input.

	— <b>Approved</b> support and submission of the proposal by Voluntary Effort to the Robert Wood Johnson Foundation for a planning grant in the area of ambulatory care and in-kind services to be provided by CMS, should such be accepted by the Robert Wood Johnson Foundation.
<b>Recommendations to COMPAC</b>	<p>— <b>Approved</b> a four-part recommendation to the COMPAC Board as follows:</p> <ol style="list-style-type: none"> <li>1. That members of COMPAC have more input into the candidate selection process.</li> <li>2. That COMPAC membership be advised of the PAC meetings.</li> <li>3. That COMPAC change its policy of not becoming involved in statewide election races, e.g. for the Attorney General.</li> <li>4. To include in COMPAC reports the attendance at PAC meetings.</li> </ol>
<b>CMS to Publish Computer Handbook</b>	— <b>Reconfirmed Approval</b> to print and distribute the Computer Handbook.
<b>Nuclear Power Generation</b>	— <b>Approved</b> the Position Statement on Nuclear Power Generation prepared for the Council on Public Health, which states in conclusion: "the CMS strongly supports the further safe development and use of nuclear energy for electricity generation and energy independence, while pursuing research and development of alternative sources of energy."
<b>Moment of Silence</b>	— <b>Observed a Moment of Silence</b> for the 12-year-old son of Dr. and Mrs. Jan Hildebrand, Canon City, who has been in a coma since November 15, 1982 as a result of an automobile accident and for R. Ray Hansen, MD, Fort Collins, who was killed in an airplane crash November 30, 1982.
<b>Auxiliary to Form Support Groups</b>	— <b>Received a Report from Auxiliary President</b> Mrs. Sharon Ritzman in which she announced that the CMS Auxiliary is forming support groups for the families of impaired physicians and for spouses of physicians involved in malpractice suits.
<b>Medicaid Recommendation Tabled</b>	— <b>Tabled</b> a recommendation from the Arapahoe Medical Society to support the concepts of the proposed Colorado Medicaid program.

The official CM Scanner mailing list is composed of the following persons:

CMS Officers  
 Members of the Board of Directors of CMS and CFMC  
 Council Chairmen  
 Committee Chairmen  
 Members of the CMS Grievance Committee  
 Members of the CMS Public Information Committee  
 CMS Component Society Presidents  
 Component Society Executive Secretaries and Directors  
 Presidents of Specialty Societies  
 Specialty Society Executive Secretaries  
 CMS Auxiliary President and President-elect  
 Component Society Auxiliary Presidents  
 Presidents of Medical Staffs at Colorado hospitals  
 CMS, CFMC Executive Staff  
 CFMC Regional Council Managers

Other persons have requested to be on the *Scanner* mailing list, e.g. some of the component society officers. If you know of any person or group who is not listed above, but who would like to receive the *Scanner*, please contact Sheila Swan, publications editor, at 321-8590.

# MEDICAL SELF-PERCEPTION:

At the request of the then president of the Colorado Medical Society, Fred Lewis, MD, I agreed to serve on the Scientific Program Committee for the 1982 annual meeting of the Colorado Medical Society. During the course of our deliberations it was decided that the theme of our program should be "Climb Every Mountain — Realizing Human Potential." Dr. Thomas Hornbein, one of the first four Americans to conquer Mt. Everest, was invited to discuss that experience and what he learned from it. Dottie Lamm was also approached to determine if she would discuss her experience with breast cancer — which had served as her personal "mountain." In addition, two distinguished scientists were invited to discuss the human brain and its potential.

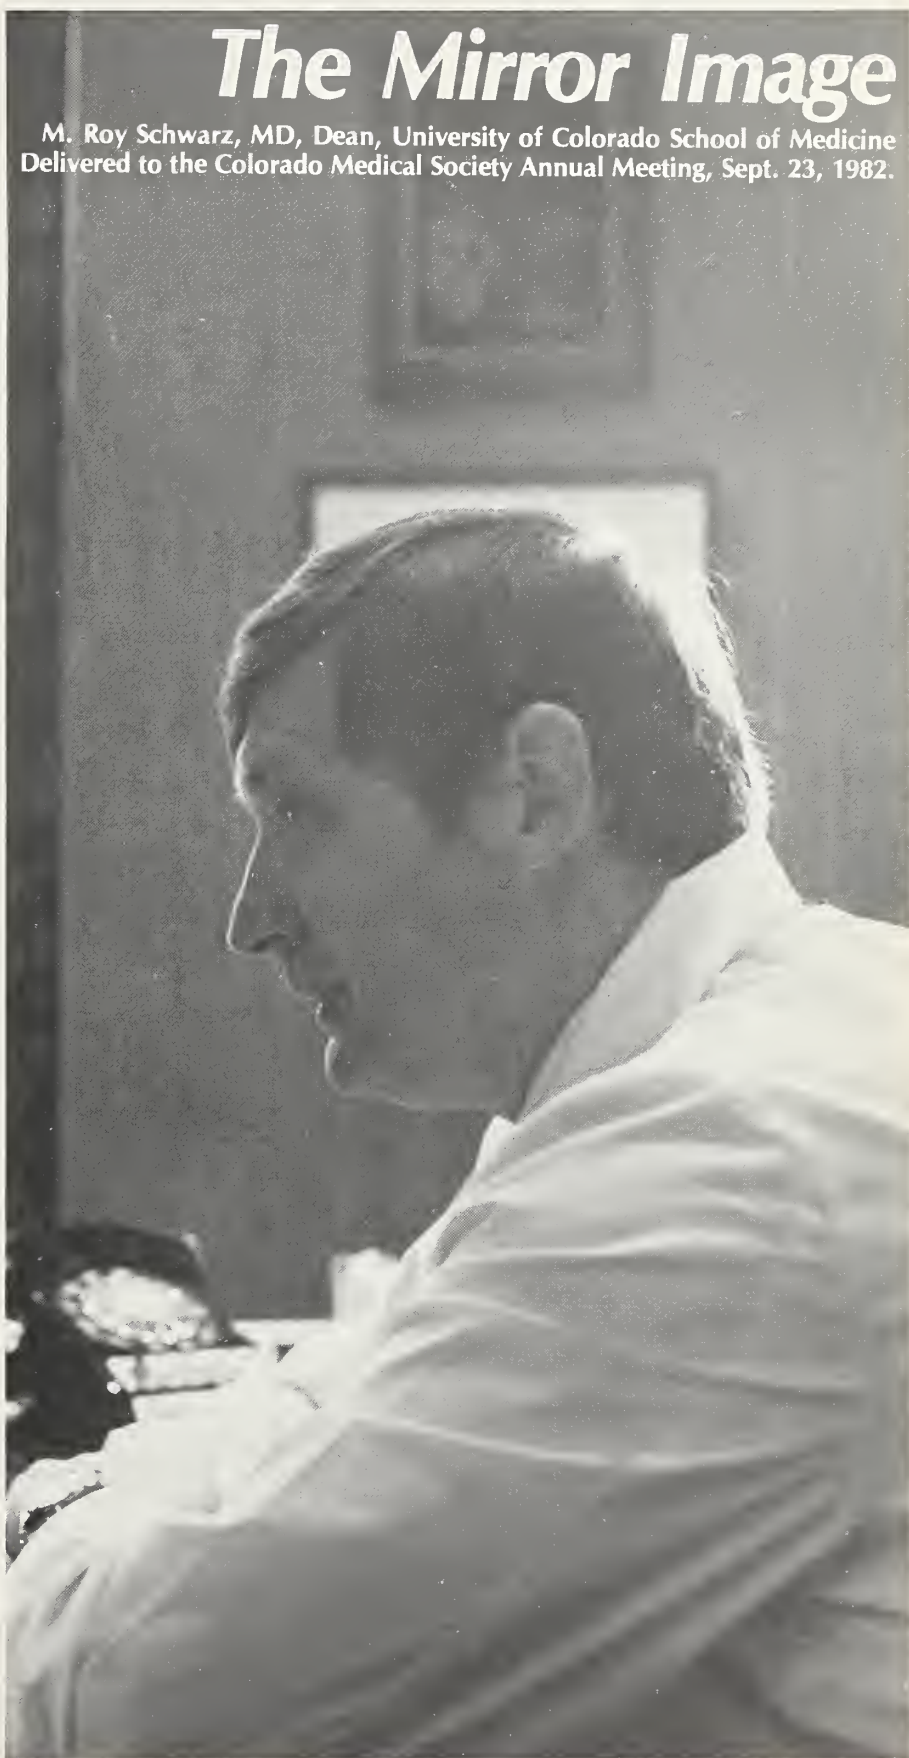

The chairman of the Committee, Franklin Yoder, MD, felt that the program also needed someone to discuss the public's perception of physicians. This seemed desirable since there was some opinion that the perception was not good and, hence, a critique could serve to focus attention on this "mountain" that we collectively must face. It was also felt that only in this way could the full potential of the profession be realized.

After repeated conversations, a number of refusals and repeated assurances that "there is no one else to do this," I reluctantly consented to give this address. My reluctance reflected the fact that a critique, although it may be helpful, is never well received. Furthermore, a critique of the profession presented by a medical school dean to practicing physicians runs the risk of being misunderstood and exacerbating "town-gown" frictions. I will leave it to the readers to judge whether I have been able to avoid this development. Since making the presentation, however, I have had a number of experiences which have suggested that my worst fears may have been realized. I sincerely hope that this is not the case.

M. Roy Schwarz, MD

## *The Mirror Image*

M. Roy Schwarz, MD, Dean, University of Colorado School of Medicine  
Delivered to the Colorado Medical Society Annual Meeting, Sept. 23, 1982.

Early in 1981 I was approached by Dr. Roger Mitchell to determine if I would join him in sponsoring a 76-year-old Chinese physician who wished to return to the USA 50 years after he had graduated from the Johns Hopkins Medical School. His goal was to travel the major medical centers in the United States and review the changes that occurred during his one-half century absence. I readily agreed and we submitted an application to the Potts Memorial Foundation which was kind enough to provide \$10,000 in travel funds. In the next four months, Dr. and Mrs. Wesley May traveled by bus in excess of 12,000 miles to 40 major cities and 37 medical schools. Upon his return to Denver and prior to his return to Ningxia Province, in north-central China, Dr. May spent considerable time with me discussing the changes he observed in the profession of medicine. If he had written his impressions in a letter, I believe it would have gone something like the following:

"My Dear Professor Roy:

Again, my wife and I thank you for the many kindnesses bestowed upon us during our visit to my 'second homeland.' Our visit exceed our wildest expectations and I can only say that we will be eternally grateful to all the fine people who helped us relive an earlier period of my life. Having not been in the United States for 50 years, I was nearly overwhelmed by the changes. Many were almost miraculous in nature and I am most appreciative to have had the opportunity of seeing them. I must say, however, that I was puzzled by many things I observed which relate to medicine as a profession. As I told you, the profession of medicine in the United States is looked upon by those of us in developing countries as a model to which we should aspire. Certainly the kinds and quality of care you can offer serves as an inspiration to all of us who look to you for leadership.

Unfortunately, not all is well with the profession from what I was able to learn. In fact, there seems to be a crisis developing which could, if not checked, threaten the very future of the profession. It appears that this crisis began some time ago, but is rapidly accelerating in its rate of pro-

gress. It clearly is not limited to the profession of medicine, but has developed faster and further in medicine and is more visible than it is in other health professions. It strikes at the very heart of the profession and erodes from within, not from without. Money can't solve this crisis. In fact, additional money may make it worse. It impacts not only on physicians but also on patients and on society at large. It was not created by either political party or by public policies. Therefore, one can't blame it on someone outside the profession. Unfortunately, many physicians are seemingly unaware of the change which has occurred.

In its simplest form, this impending crisis reflects a fundamental change in physician attitudes and behaviors. This is best characterized by the question, 'What can I get out of the profession that will enhance my personal well-being versus 'What can I contribute as a physician which will enhance the welfare of my patients and also the profes-

---

**"In fact, there seems to be a crisis developing which could, if not checked, threaten the very future of the profession."**

---

sion of medicine?.' Even more serious, however, is the fact that the public is well aware of this change and it is affecting their attitude toward us all.

This is, for an 'adopted American,' a very serious charge to make and I do not make it lightly nor do I wish to offend you by sharing my feelings so directly. It might be that I misunderstood or did not fully understand these things and, hence, there may be an explanation which could minimize my concerns. The following, however, continue to puzzle me.

If one looks first at the student level, including the pre-medical students, undergraduates, medical students and residents, I found numerous articles which outlined in a very convincing way the pervasiveness of cheating which occurs on the part of these 'learners.' One article reported that 60 to 70% of all pre-medical students cheated on an examination and 60% of these students continue

to cheat in medical school. Another article reported that 95% of medical students admit that they have observed dishonest behavior while in medical school but have done nothing about it. Eighty percent of residents in a third article admitted to improper practices during training, or at least, improper conduct relative to high-quality care.

Continuing at the student level, I found in talking to students, residents and faculty, repeated instances of failure to carry out responsibilities by the trainees. For example, students at one institution, at the request of or with the concurrence of residents, forged patient orders and forged signatures to those orders. Many students fail to appear on time for rounds and fail to report the progress of their patients since they had failed to monitor their patients' progress. Some students and residents admitted to 'dry labbing' (a term which is new to me) the work ups, especially those routine and simple laboratory procedures which are part of every examination. Other residents and students admitted to leaving the hospital at times when their colleagues needed assistance or at times when they had not completed their patient care responsibilities. Finally, I was amazed to find such a high rate of delinquency, estimated at 11-12%, in the repayment of student loans. I was even told that some students claim bankruptcy when they finish their training in order to avoid repaying those who made their education possible. Given that it is a privilege and honor to study medicine and because delinquency of this nature reflects on all physicians, I was most puzzled by this seemingly irresponsible attitude.

Among students and residents I found a distinct change in attitude compared to what my classmates had when I was a student. Medicine is, in their minds, an avocation and not a vocation. They seem to have many interests besides medicine, all of which are commendable and of great benefit. However, the students appear to want to work only 30-40 hours a week and still have a very high standard of living. I do not believe one can be a physician in the truest sense of the word for only 30-40 hours a week. People who are ill require care on a continuous basis

and physicians must be ready to respond when needed.

Not all of the changes I observed are at the student level. As one observes those physicians who work full time at academic institutions, I was extremely disturbed to find reports of medical scientists who were falsifying their research data, conducting unethical human experimentation or guilty of overt fraud in the management of federal funds. In addition, I learned of faculty who had signed contracts to bill and collect for professional fees *within* what you call a practice plan or practice organization, only to send bills directly to patients and then retain the collected fees for their personal use. I found instances where faculty members failed to prepare for their teaching or patient care responsibilities, being too preoccupied with other pursuits. Finally, I attended rounds in which patients were humiliated, not only by the behavior of physicians toward them, but by the terminology which was used such as 'gomer' 'squash rut,' etc. I was told by young professors that there are full-time faculty members who use leave time from their institutions to enhance their own personal fame and fortunes. I wonder whether a professor who is often absent from the campus can fulfill his responsibility to the 'charges' that have been entrusted to his care.

These sources of puzzlement are not limited to the students or the academic component of American medicine. Looking at those of our colleagues who are in private practice, I was astounded to learn that some of them are being convicted of income tax evasion which I gather means failure to report income and to pay proper taxes on it. Others are being accused of and, in some cases, convicted of Medicaid and Medicare fraud. This means, I understand, charging patients for services not provided. I even learned of an instance in which an orthopedic surgeon operated on a patient and then did not see the patient again for five days. In addition, I was puzzled by the fact that some physicians can charge 30 times per hour what other physicians can charge. Drugs, divorce, adultery and emotional instability seem to claim 5% of all physicians or a significantly higher

percentage than the national average for all Americans. I read a survey which was conducted by the Henry J. Kaiser Family Foundation attempting to assess the attitudes of some 1300 practicing physicians and 200 residents. It is clear that they were all discouraged about the future of medicine in the USA and, as a consequence, have a great hesitancy in recommending it to young people. Most of them believe that regulations forced on the profession from outside will change the face of practice. The most common complaints which I heard from patients were, 'my physician doesn't listen,' 'he doesn't explain' and 'most often he is not on time.'

At the collective professional level, I was shocked to learn that 35% of the health care delivery system is owned by *for-profit* organizations. I understand that these have been growing at the rate of 15-20% per year, *corrected for inflation*, so that by 1990, unless there is a change, more than two-thirds of the health

---

**"Physicians must return to the values upon which the profession was founded and which the public has a right to expect."**

---

care delivery system could be owned by people who want to make a profit from caring for the sick. This includes group practices, pharmacies, laboratories, nursing homes and surgery centers. When I asked who owned these organizations, I found that a very large percentage of the owners are physicians. Is it a conflict of interest to have shares in these for-profit businesses if you are delivering the care from which the profit is made?

This, coupled with unionization in the province of Quebec, was surprising. While physicians claim that such unionization is necessary to protect the welfare of patients, one cannot but be struck by the large component in the arguments concerned with protecting the physician's income. Physicians also claim that this posture has been forced by government, but I wonder, 'Why has there been such a change in the government's attitude toward physicians?' Changes in government attitudes exist, not just in Canada, but

also in the United States where the Federal Trade Commission has just struck down the AMA's longstanding ban on advertising. Why, when this ban was designed to protect the less knowledgeable people from unscrupulous charlatans, has this posture been developed? Government tends to interfere all too often but these changes seem very severe for a country with the attitudes that the USA has.

Finally, I discussed malpractice with a variety of colleagues both inside and outside the profession. I gather that there has been an alarming increase in malpractice suits over the past ten years. Specifically, I understand that five years ago there was a large spurt in the number of malpractice claims and that this is occurring with an increasing number of suits, an increasing number of settlements, and an increase in the size of the settlements. In fact, one insurance agent told me that ten years ago the insurance industry believed that one in ten malpractice suits involved physician negligence. Today, they believe one in four cases of malpractice to be due to physician errors. Are some of these suits also due to a perception that physicians are wealthy and hence, "can afford" to pay for alleged errors?

In summary, I would emphasize that I may have misinterpreted and not understood fully what I learned, but at an individual and collective level there seems to have been a change in the behavior of physicians reflecting the changing attitude toward the profession and their role in it. In turn, the public has altered their perception of the professor.

What then can or should be done? From an outsider's point of view, it appears that since there has been a basic change in the behavior and attitude of physicians, steps must be taken to change attitudes and, hence, behavior. Specifically, I believe physicians must return to the values upon which the profession was founded and which the public has a right to expect. Included among these would be that physicians must be honest — their integrity must be above question. They must be sensitive to the rights of others. They must be tolerant and understanding of inadequacies in others. They must be empathetic

with those who are suffering. They must honor confidences. They must be knowledgeable and must be devoted to continued learning. Indeed the doubling time of medical knowledge is 3.5 years and if more scientists are working in the medical laboratories today than in all of recorded history, then physicians must be dedicated to continued learning if they are going to remain competent and current. They must also be of clean mind and body. They must be devoted to the service of others and they must adopt the golden rule of 'do unto others as you would have them do unto you.' This, I gather, Dr. Arnold Rellman, the editor of the New England Journal, has chosen to call responsible professionalism. And if I could paraphrase the late President John F. Kennedy, who was looked upon as a great humanitarian by the Chinese people, 'We physicians must ask not what the profession can do for us, but what can we do for the profession!'

I believe that if there is a change at the individual level, then there will be a change at the collective level and a reversal of things I observed will occur. If, on the other hand, there is not a reversal of the trends, I

believe the crisis will grow and become more evident, regulations will increase which will depersonalize the system, physicians' freedoms will be reduced in the name of 'good of the whole,' and patient welfare will suffer. In this scenario, the profession may exist in name, but in fact, it will be dead, without impact on public policies, the direction of health care and the ultimate welfare of patients.

Will the profession survive? The answer lies with those who chose to call themselves professionals. If all physicians aspire to live according to the Oath of Hippocrates or the Prayer of Maimonides, then I am very optimistic about the future of our profession. It is clear that your scientists have taught us that 'old dogs can learn new tricks, but the young dogs learn them more easily.' Since you are producing sizable numbers of young people, it seems to me that one place where you could begin to make a change in attitude is at the student and resident level. In one sense it is ironic that at a time when physicians in the United States have the greatest health care armamentarium available to relieve suffering that the world has ever seen, you appear to have an

overwhelming need in the human area.

While you might be discouraged by the magnitude of the task which lies before you, may I remind you of a saying from a famous Chinese, Mao Tse-tung, which might be helpful. 'Happiness is in the struggle, not in the victory.' There is another ancient Chinese proverb which may also be useful to you and that is, 'The journey of a thousand miles begins with a first step.' I pray for the sake of us who look to the USA for leadership that some of you will be able to take that first step.

Please forgive me, Dr. Roy, if I have offended you by my candor and recognize that I was a visitor who returned to your wonderful country after a 50-year absence. It may be, therefore, that I have misinterpreted, overinterpreted or misunderstood those things which I learned. However, if there is a grain of truth in what I have written, I sincerely hope that my sharing it with you will have been of some value. Thanks again to your wife and family and to all my friends in America. I hope that someday I will have the opportunity to share China with you in my own Province of Ningxia and repay your kindness.

With warmest personal regards and deepest personal respect, I am,

Wesley K.C. May, MD"

*"The journey of one thousand miles begins with a single step."*

Mountains come in all sizes and shapes and we must climb them individually and collectively. If the perception presented truly reflects the public view of our profession, we do have a challenge to which to respond. The fact that many of the problems outlined reflect the behaviors of only a small portion of our profession, does not obviate the fact that these few people have shaped the public's perception of us all and we collectively catch the fallout. While we may not like to hear the things I have said, they nevertheless portend serious problems for us in the future if they are allowed to run their course. I believe, however, that we can reverse this situation if we are willing to try, since every patient has at least one physician who is an exception to the general view of the profession as a whole.

"When asked a couple of months ago if I would put together a brief account of my late husband's life and the tragic events precipitating his death, I knew that it would be an extremely painful and difficult task. However, I have very strong feelings about what happened to him and the fact that if sharing this information could in any way help to provide some insight into the lives of others, it would be well worth the pain I would experience in so doing.

One point I would really like to convey, if none other, is the fact that this story is a classic example of one that you would read about or hear about, but not one that would ever happen to you.

I will proceed by giving a brief summary of his life as a child according to his mother, followed by a year-by-year account of Bob's life from the time I met him (which happened to be at a very young age) and his many achievements throughout those years, as well as accounts of his 'downfall' and ultimate self-destruction.

Bob was the eldest of three sons and, according to his mother, he was an extremely bright and easy child to raise. He was very easy-going and always did well in school and at anything that he ever tried. He was very handsome, athletic, outgoing and responsible. He was very independent, personable, caring, considerate and well-liked by all. He was the kind of son his mother's friends wished their sons to be. In other words, the 'ideal child.'

I met Bob in high school and my list of adjectives used to describe him is endless. I thought he was wonderful!

Bob attended high school from 1964 through 1967 and during the summer between his junior and senior years, he won a scholarship to, and went through, the Colorado School of Outward Bound — a school known to test one's limits of survival. He played basketball and was a star football player throughout his high school years and was even presented a football scholarship to college, which he chose to turn down.

During Bob's summers as a child and throughout high school, he helped his father build a mountain cabin; it was during those years that he developed a deep love of the

President, Colorado Medical Society Auxiliary

***The Colorado Medical Society Auxiliary is involved in many areas of community and physician concern. One of the Auxiliary's newest programs is the formation of a support group for the families of impaired physicians. The following true account, written by the physician's widow, is an example of a physician-family that may have benefited by such a support group.***

***Hopefully, the Auxiliary's involvement may help to prevent such a tragedy from occurring in the future. Please call the CMS office (321-8590) if you need our help.***

mountains and nature in general. He did much hiking and backpacking and became an avid waterskier as well.

As Bob began to feel that his financial needs were becoming greater as he was getting older, he decided to take on a parttime job while a senior in high school. He was very popular and graduated with honors in June of 1967. In the fall of that year Bob began undergraduate study with a major in biology at the University of Colorado at Denver. He maintained a 30 to 40-hour-a-week job, working evenings and nights, while at the same time managing to maintain a 3.9 GPA. We were married between his sophomore and junior years of college and both continued in school and work full time.

Bob's senior year was eventful in that he received an honorary award in a biology fraternity, the name of which now escapes me, and also was presented another honorary award — that being Phi Beta Kappa, along with membership into that organization. It was also during his senior year in college that Bob decided he wanted to be a physician and thought he would pursue that end by applying to various medical schools.

In March of 1972 Bob received notification of his acceptance into the class of 1976 at the University of Colorado Medical Center and shortly thereafter received his BA degree

from the University of Colorado at Denver.

Throughout our undergraduate years, even while working and going to school, we somehow managed to include outdoor activities into our hectic schedules and became avid skiers, both alpine and cross country. Whenever he could get away or had a break, Bob continued to do much camping, hiking, mountain climbing (many of which were the Colorado 14'ers) and hunting. He loved people and was the great organizer in getting all of our friends together to participate in these wonderful activities.

One of Bob's many great attributes was his incredible yearning for knowledge. He engulfed any reading material that was anywhere within his reach — any trip to the grocery store that he would make always included two or three books found at the bottom of the grocery bags. He loved to read.

Bob began medical school in September of 1972 and one month later our first child, a little boy, was born. Needless to say, those four years were filled with much hard work; however, in many ways they were probably our most rewarding years. We did not let medical school and having a young child prohibit us from doing the things we loved most; namely, skiing and camping — we just took our little guy along.

Bob did very well in medical

school and graduated in the top end of his class. He somehow managed during all of his busy years to get some form of physical exercise daily — whether it was handball, racquetball, tennis, basketball or a casual game of volleyball with fellow medical students. In thinking back, I really wonder how Bob was able to fit so many things into his life but he always managed. He found ways of doing several things at the same time — an example being the times when he would tape his study lessons and then take off on a hike in the mountains with his tape recorder and a lunch in a pack on his back.

Along with his love of sports, there were many interests that Bob developed over the years that I knew him; one of which was his love of working with wood. It eventually became one of his most satisfying pastimes. He built and refinished many pieces of furniture.

In December of 1975 during Bob's last year in med school a beautiful little girl was born to us. Shortly thereafter we packed our belongings and went to Scotland, where Bob studied at Edinburgh and completed medical school. We traveled Scotland, England and Wales and

returned home in time for graduation ceremonies in which Bob received his MD degree. At that same time Bob was informed that he would do his 3-year residency in a smaller town — the name of which I will not mention for reasons of privacy.

We bought a Victorian-style house and decided to combine our talents to refurbish it. It was in July of 1976 that we made our move and Bob began the great challenges of an intensely demanding residency.

During these years of residency Bob discovered the rewards of running. His accomplishments in this regard from that time until his death included two marathons and three Mount Evans races. He always had incredible expectations for himself and would never give up until he attained the goals he set out to accomplish.

Bob graduated from the residency program in June of 1979 and was considered to be one of 'the most promising' young physicians. It was no one else but Bob who was chosen to give a speech for his graduating colleagues.

However, it was also during Bob's residency that I sensed a real

restlessness in Bob. I really could not pinpoint anything as a cause except for the tremendous amounts of stress he was under, compounded by the fact that he got very little sleep. During Bob's last year of residency he was experiencing much turmoil in trying to make a decision as to where and with whom he should set up practice. He decided to try emergency room medicine until he could make some concrete decisions. However, not long thereafter Bob experienced an 'identity crisis' and it was at that same time that he also discovered cocaine, the beginning of his end.

A brief account of his drug involvement follows: Bob's first introduction to the use of drugs, namely marijuana, was in a very 'benign' and 'subtle' way in his last year of medical school. I guess it was the social thing to do and was done for 'fun' and only at social gatherings — not a lot, but rather on occasion. As time went on, Bob's use still consisted very benignly of occasional use with friends at times of social outings. However, through his years in the residency program I began to see an increase in his usage. It wasn't a lot, but nonetheless it was

## ***Is there a doctor on the road or at the game?***

an increase. His drug usage was no longer limited to social gatherings, but also occurred on weekends when he was not on call — for 'enjoyment' purposes or to 'relax.'

Still, as time progressed, I continued to see this increase and made my concerns known. In retrospect, I suppose as the amount of stress increased, so did his 'need' for this substance. It was also at this time that I began to feel an estrangement in our relationship, as well as that with the children. I make the assumption that my basic feelings regarding the use of marijuana and his feelings about it was the contributing factor in our later troubles and ultimate separation.

The stress that Bob experienced in practicing emergency room medicine was incredible. He was expected to be on 24 hours, off 24 hours and back on 24 hours. This went on for a couple of months until he experienced his 'crisis.' The three years following were full of much confusion and turmoil for Bob for which he sought psychiatric treatment. He really loved people and loved being a doctor; however, the stress for him was overwhelming.

His coping mechanism had become the use of marijuana and later cocaine.

Realizing that emergency room medicine was not his forte, Bob chose to enter into a trial partnership with a physician with whom he had worked while still a medical student. This arrangement was dissolved a year later at the same time that Bob had another 'crisis' with the use of cocaine. He was referred to a behavioral psychologist hoping to rid himself of the 'need' for drugs, as well as trying to make some sense out of a life he so badly screwed up.

He began his own solo practice and was doing very well. Within a year's time he had a full practice and his patients adored him. However, during this time Bob separated from his family to try to find what it was for which he was so desperately searching.

He gave up his search in July of this year by overdosing on cocaine. He left behind two wonderful children who absolutely adored him, along with myself, his family, friends and all of his patients who loved him dearly."

## ROCKY MOUNTAIN MEDICAL JOURNAL

### CENTENNIAL YEAR BOOK

is still available, providing 100 years of history of the University of Colorado School of Medicine and the continuous involvement/support of the Colorado Medical Society.

This Year-Book of the Centennial is also the last publication of the Rocky Mountain Medical Journal, so it should be a "must" for your personal library.

To order: send check or money-order in the amount of \$8.40 to Colorado Medical Society, Bldg. #2, Denver, 80224. Last publication. First come, first served!

## Colorado Foundation for Medical Care Position Paper on Neuro-augmentative Neurosurgery for OCHAMPUS

### Introduction

The field of neuro-augmentative neurosurgery is not new. For nearly 28 years, work has proceeded in laboratories to devise the sophisticated equipment and the techniques to best introduce electrodes and stimulating devices in order to relieve pain and spasticity in affected individuals. For some 15 years, papers have been reported in the neurological, anesthesia, neurosurgical, and pain literature discussing the techniques for thalamic, cerebellar, and spinal stimulation. The trend in the past five years has been toward the perfection of the stimulating apparatus and the isolation of individuals who would most likely benefit by this technique. The literature confirms the high efficacy rate for the use of spinal stimulation in patients with chronic low back and leg pain when the individuals most likely to benefit have been selected.

### Indications

Neuro-augmentative neurosurgery is appropriate for patients who 1) have had chronic pain for no less than six months, 2) who have failed to respond to classical neurosurgical and orthopedic procedures, at times including cordotomy and multiple rhizotomies, 3) have had other non-surgical treatment which has not been successful, and 4) have had complete psychological and/or

psychiatric evaluation. This patient population must have, as best as possible, a complete evaluation to confirm the presence of organic disease. Hence, crucial in their evaluation is the identification of elements of psychoneurosis, malingering, exaggeration, failed motivation, and psychosis. Physical therapy evaluation may be necessary for more complicated or disabled patients. There seems to be a better response in younger patients, and the criteria for utilization of stimulation techniques are stricter in older patients, i.e., over 50 years of age.

It appears that insurance carriers have accepted the technique of peripheral nerve stimulation, although it appears as time goes on that spinal stimulation is more accepted because of higher efficacy and less morbidity. Cerebellar stimulation is probably experimental even after five or six years of publications. It is not used for painful syndromes, but has been utilized for seizure and spastic disorders. Spinal stimulation has been used for severe spasticity secondary to spinal cord injury, but the results are variable. It must be considered experimental at this time in spastic-related disorders. The one pain symptom complex that cannot be treated by spinal stimulation is that of headache. Only on rare occasions has thalamic stimulation been at all helpful to patients suffering from chronic headache.

The neuro-augmentative evaluation can be, in most patients, performed on an outpatient basis, in some, within a few days. In more complicated patients it requires some number of months for accumulation of data, including hospital reports, operative reports,

and review time. Few patients are considered for a procedure in less than three months.

### Pain Pathophysiology:

Pain is a sensation that is shared in all living creatures. In the usual sense, it signals danger to the body and elicits protective behavior. From the earliest times, physicians have related the location and quality of the painful complaint to the diagnosis. It is often an early complaint in many conditions.

The syndrome of chronic pain is different. The pain no longer has a useful function and, therefore, becomes a symptom that significantly hampers the function and psychological behavior of the affected being.

Pain, of course, is a subjective symptom. There are few ways of confirming its presence, although at times tests may aid the physician in the confirmation of the presence of pain. What can be screened is the presence of severe psychological disease that may evidence itself by "painful behavior" and abnormal psychological testing. There, of course, are individuals who suffer both: chronic pain and an independent psychological disorder. What is important is that there be specific and reliable treatment. Chronic pain does not respond to surgical procedures aimed at treating acute pain, or to medications that reduce the symptoms of acute pain. The medical perspective for patients with a chronic pain syndrome must be altered. Many physicians are unaware of the differentiation between acute and chronic pain and in these situations often offer the patient treatment, with good intentions, that, with few exceptions, will end in failure. There are a variety of options available to patients with chronic pain:

#### 1. Psychotropic drugs:

These medications include phenothiazines and antidepressants. A related group of medications includes the phenytoins and Tegretol, which have been found to help some patients with pain-related problems. There are other drugs useful in altering "painful behavior."

#### 2. Neuro-ablative procedures:

This includes neurectomy, rhizotomy, cordotomy, thalamotomy, tractotomy, and lobotomy. The problem with these procedures

is that often the pain recurs and patients are asked to "trade off" some aspects of neurological function for relief of pain. There is a distinct group of patients for whom abalative procedures are excellent, particularly those with cancer in whom a limited life expectancy precludes the recurrence of any significant degree of pain.

### **3. Nerve block and neurolytic procedures:**

These procedures involve the application of chemicals to the involved neuro-anatomic structures. This includes peripheral nerve blocks, chemical cordotomies, etc. These procedures also may offer patients with chronic pain syndrome of organic origin good relief but problems with them include tachyphylaxis. The syndrome of causalgia may at times respond to this procedure. Neurolytic injections should be reserved for patients with near-terminal disease.

### **4. Neuro-augmentative procedures:**

In the middle of the 1960's, reports were first issued on the use of peripheral nerve stimulation. In these procedures, electrodes were

wrapped around affected nerves and, using a radio link and permanently placed electrodes beneath the skin, stimulation of pain-inhibiting fibers was accomplished. There are patients still alive today who benefit continuously from this procedure. A variant of this is the use of transcutaneous nerve stimulation, where the electrodes are placed on the skin just above the painful area. The patient experiences a vibrating sensation which spreads to relieve pain in that area. It is, with few exceptions, a benign and safe procedure.

Because of failures in the area of peripheral nerve stimulation, efforts were made to cover more spinal segments and be more effective. In the early 1970's, electrodes were placed by "open" operation, along the side of the spinal cord. Reports early in the 70's were glowing with the success of spinal cord stimulation. Indeed, in a properly selected group of patients, success rates using some techniques at some sites, e.g. epidural stimulation, ranged at around 80 percent. In many series, it was found to be more effective than treatment by laminectomy for

chronic sciatica. The problems, excepting the few cases of infection and spinal cord damage, involve treatment failure of the pain. Neuro-augmentation yields about 75% success rate with certain types of pain, such as that due to cancer infiltration and failed back surgery, even when pain is refractory to high doses of narcotic analgesics.

By the middle '70's, neuro-augmentative techniques fell into disrepute. With the successful development of a multi-site electrode with a multi-programmable implant, the procedure has returned as a useful treatment in the pain armamentarium. The expense is not slight. Multi-site electrodes cost \$4,500.00; multi-programmable implants approximately \$3,700.00. The associated computerized hardware and software, as well as the surgeon's time, operative time, x-ray confirmation, etc., estimate to approximately \$10,000.00 to \$12,000.00 per patient. This compares with other treatments for chronic pain, including pain clinics, which may range in cost from \$6,000.00 to \$20,000.00. The efficacy rate for pain clinics ranges

# PLEASE REMEMBER

56 Club Manor Drive/Pueblo, Colorado 81008  
(303) 545-5408

from 30 to 70 percent for relief of pain and a functional return to society. Even pain clinics state that patients may have to return for "refresher courses" and "refresher evaluations" if painful behavior and disability recurs. Repetitive operations may be necessary. This is well known to the area of functional neurosurgery, i.e., the area of neurosurgery dealing with the change in function in an effort to obviate symptoms.

Cerebral stereotactic procedures performed by Cooper, Feinstein, and Gillingham have the assumption that reoperation is likely, either for changing stimulation electrodes or increasing the size of a lesion should that have been necessary. Other neurosurgical procedures that require "known" reoperations are shunts for hydrocephalus. Thalamic stimulation has been reported by Siegfried, Feinstein, and others. Targets within the brain are more appropriate for upper extremity pain or in those patients in whom spinal stimulation was effective but whom it has failed. There are areas of the inner portion of the brain that can be targeted with stimulator electrodes

to eliminate pain. Failures even in this area may yet be reversed by more versatile and stable electrode systems.

It appears from both experience of the committee and a literature review that neuro-augmentative neurosurgical techniques are effective. Individuals suffering from chronic pain are likely to draw on the health care systems for their entire lives. As these patients are often young, their health care expenses will accumulate as time goes on. As the success rate of neuro-augmentative techniques becomes higher, perhaps the efficacy rate may yet be improved upon. There are very few pain-relieving surgical procedures that can quote such a figure. Granted, the selection procedure for other procedures is not nearly as exhaustive. The likelihood that the equipment and techniques will simplify and become more effective as time goes on further supports its being offered to patients. Those people with chronic pain syndrome who are hospitalized, at times two or three months per year, in an effort to alter some aspect of their pain, draw far more on health system resources

than patients who have a working spinal stimulator. Indeed, those patients may be returned to society to become, to themselves and their families, assets rather than liabilities.

Kenneth P. Burres, MD,  
Chairman Subcommittee on  
Neuroaugmentative Neurosurgery

## Your next home should be a Timberpeg, because looking good on the outside is not enough.

**T**here are certain basic demands which must be met by every home. Beyond these are amenities that make for truly good living. They are amply provided for in Timberpeg's Post and Beam homes.

**We don't use nails!** Instead of 2" x 4"s, we use 8"x 8" timbers for the frame. These are interlocked by mortise and tenon joints instead of nails. The result is a home of rugged durability that meets every standard of architectural good taste.

**The home is remarkably energy efficient.** Post and beam construction literally wraps your home in a tight envelope, and opens both active and passive solar possibilities.

**The perfect blend of contemporary and traditional.** But the real reason for choosing Timberpeg is the beauty of the natural wood and the awesome spaciousness of the interiors. Glass, texture and color are carefully blended for a spectacular appearance.

**Get all the details in our brochure/ portfolio.** Act today to learn how you can build your own Timberpeg original. Send \$10.00 for our full color, 50-page brochure/ portfolio to the Timberpeg office nearest you. VISA® and MasterCard™ orders please call.

# Josiah Newhall Hall

*James J. Delaney, Jr., MD, Historian, Colorado Medical Society*

Josiah N. Hall was one of the best known physicians of his time. He was born October 11, 1859, in North Chelsea, Massachusetts. His father was a farmer but had taken time off to prospect in the California gold fields, reaching California via sailing ship. He had an excellent education, receiving a BS degree from the Massachusetts Agricultural College in 1878 and his MD from Harvard in 1882. He spent one year as a resident (intern) physician at the Boston City Hospital. In those days a good medical education consisted of attending a series of lectures over a 12 - 20 week period. Some of the lectures, especially in surgery, were also accompanied by a demonstration. Students seldom if ever had any actual experience in the care of patients. The same lectures were repeated the following year. Anyone completing the two-year course was given a degree and sent out to practice medicine. Most students of medicine began their studies at the completion of high school and completed their prescribed courses by the time they were 20 years old. At the same time there were many "ten-year" men practicing medicine. These were people who learned by preceptorship or were simply self-taught and were granted the authority to practice medicine by filing an affidavit proving that they had practiced 10 years or more.

So Dr. Hall was exceptionally well-trained when he moved to Sterling in 1883. It is not clear why he came west and settled in Sterling. The population of Sterling at the time was 250 and the town was not even incorporated until the following year. He married the town's schoolteacher and was actively involved in politics, serving as the

town's mayor in 1888. Between 1883 and 1886 he was the only physician in the Platte River valley between Denver and North Platte, Nebraska. In 1886 Dr. Hubert Work, another famous Colorado physician, moved to Ft. Morgan and the two of them met the medical needs of northeast Colorado together. He soon became recognized as an excellent diagnostician, especially in

**Josiah N. Hall, MD**

difficult cases, and also an authority on gunshot wounds, which made his testimony in criminal cases in demand throughout the country.

He moved to Denver in 1892, primarily to accommodate his many referrals for consultation. He was a prolific writer, avid hunter and outdoorsman, and extremely active in the local and national medical societies. He published about 150 papers in his lifetime and his textbook of *Borderline Diseases* was well received and read after it was published in 1913. He was well liked

and respected by all who knew him. He has been referred to as the "Osler of the West," which gives some idea of his prestige in the area.

He probably attended more meetings of the Colorado Medical Society than any other member — 53 consecutive meetings. He served as president in 1899 - 1900. He refused the presidency of the AMA when it was offered, stating he was too old. Prior to his death in 1939 he wrote a series of anecdotes for the *Denver Medical Bulletin* which were published in book form under the title of *Tales of Pioneer Practice*. These were mostly reminiscences about physicians he had known in the state. The book and a sister book entitled *Reminiscences of Past Presidents of the CMS* are available in the DMS Library and make fun reading in one's spare time. Dr. Hall influenced three generations of physicians and countless patients benefited directly and indirectly from this dynamic, dedicated physician. He is truly deserving of our memory and respect. Thanks to Robert K. Brown, MD, for much of the information provided here. See *J.N. Hall, Pioneer Physician*. The *Denver Westerners Roundup*, July -August 1981.)

# Tax Equity and Fiscal Responsibility Act of 1982

by David L. Hlavac, Director, CMC Division of  
Medical Economics and Professional Relations

*The recently enacted Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA) incorporated a number of significant changes in areas that will have variable impact upon physicians in Colorado. A summary of the extensive provisions affecting the Medicare, Medicaid and PSRO programs is provided below. Where the term "provider" is used, it is meant to indicate "hospitals" rather than physicians.*

*The legislation authorized the Secretary of the Department of Health and Human Services to promulgate regulations to implement a number of the provisions of the act. The proposed rules to implement a particularly controversial section of the act, Section 108 "Reimbursement of Provider Based Physicians," were published in the October 1, 1982 Federal Register. The AMA and the College of American Pathologists were among the groups that came out in strenuous opposition to a number of items in the proposed regulations. The "Summary Statement of the American Medical Association to the Health Care Financing Administration," detailing the AMA's concerns with the regulations implementing Section 108 is published following the synopsis of the TEFRA bill.*

## Abbreviated Summary of Changes Affecting Medicare, Medicaid and PSRO

*For a Complete Synopsis, Contact the CMS Division of Medical Economics and Professional Relations at 321-8590.*

### Subtitle A — Medicare

#### **Section 101** *Payment for Inpatient Hospital Services*

Expands current Section 223 cost limits, i.e. the maximum amount that Medicare will pay for inpatient hospital care, to include ancillary service operating costs. New limitations would be applied on an average cost-per-case basis and the limitation would be modified by a case-mix adjustment. For fiscal year 1982-83, the limitation for costs is set at 120% of the mean of costs of hospitals of the same type. The limits for fiscal year 1983-84 decrease to 115% and for fiscal year 1984-85 to 110%.

Provides for exemptions from the expanded limitations, as well as adjustments and exceptions in certain instances. Also, excludes hospitals, located outside of standard

metropolitan statistical areas, with less than 50 beds.

Also sets targeted per year rate of increase in hospital costs, and provides incentive of allowing hospitals that hold costs below target to keep 50% of savings up to maximum of 5% of targeted amount. Hospitals that exceed target would be allowed reimbursement of 25% of the excess of their rate increase limit for the first two years, with no reimbursement of costs that exceed target in the third year.

Specifies the development of a prospective reimbursement system for hospitals and skilled nursing facilities, with Secretary of HHS to report to Senate Finance and House Ways and Means Committees on proposal within five months.

Expected savings: \$480,000,000 in fiscal year 1983, and \$6,020,000,000 in fiscal years 1984 through 1985.

#### **Section 103** *Elimination of Inpatient Routine Nursing Salary Cost Differential.*

Payments of additional amounts for routine nursing salary costs in inpatient hospital and skilled nursing facilities, originally based on theory that older patients require more nursing care than younger patients, would be eliminated after October 1, 1982.

#### **Section 104** *Elimination of Duplicate Overhead Payments for Outpatient Service.*

Calls for Secretary to issue regulations to limit the reasonable charge for services of physicians who provide services in hospital outpatient departments to a percentage of prevailing charges for similar services furnished in a physician's office, taking into account the extent to which the overhead costs of the department have been included in the hospital's costs or charges.

#### **Section 106** *Prohibiting Payment for Hill-Burton Free Care.*

Costs incurred by hospitals or skilled nursing facilities in complying with free-care obligations of the Hill-Burton Act are not considered to be reasonable costs for purposes of determining Medicare reimbursement.

#### **Section 108** *Reimbursement for Provider-Based Physicians.*

Directs Secretary to prescribe regulations which will distinguish between (1) professional medical services which are personally rendered to individual patients and contribute to the patient's diagnosis and treatment, reimbursable under Part B, and (2) professional medical services which are of benefit to patients generally, reimbursable under Medicare Part A. Additionally, requires publication of regulation establishing reasonable compensation equivalents (RCE's) for compensation of provider based physicians (e.g., radiologists, pathologists, and anesthesiologists).

#### **Section 110** *Elimination of Lesser-of-Cost-or-Charges Provision.*

The "lesser of cost or charges" reimbursement provision would not apply to a class of providers if the Secretary determines and certifies to Congress that elimination of the provision will not increase Medicare payments to that class of providers.

The provision would be re-established if the Secretary determines that its elimination has increased program costs.

#### **Section 111** *Elimination of Private Room Subsidy.*

Requires Secretary to implement provisions of current law which prevent reimbursement for non-medically necessary private accommodations.

#### **Section 112** *Reimbursement for Inpatient Radiology and Pathology Services.*

Eliminated the 100% reimbursement rate for services provided to hospital inpatients by radiologists and pathologists who accept Medicare assignment. Reimbursement for these services will be on the same basis as for other physician's services, i.e., 80% of the reasonable charge after the Part B deductible has been met.

#### **Section 113** *Reimbursement for Assistants at Surgery*

Prohibits reasonable charge reimbursement for an assistant at surgery in hospitals where an approved training program exists in the specialty and a qualified staff physician is available to provide the service, except when: (1) the surgery is performed by a team of physicians needed to perform complex medical procedures; (2) the patient has multiple conditions which require the presence of, and active care by, a physician of another specialty during surgery; (3) in the case where exceptional medical circumstances exist; and (4) other appropriate circumstances exist as determined by the Secretary.

#### **Section 116** *Medicare Payments Secondary for Older Workers Covered Under Group Health Plans.*

Amends the Federal Age Discrimination in Employment Act to require employers to offer their employees age 65 through 69, and their dependents, the same health benefits offered to their younger employees. Also makes Medicare benefits secondary to other benefits available to such employees.

#### **Section 117** *Interest Charges on Overpayments and Underpayments.*

Requires the imposition of an in-

terest charge if a provider or supplier has received an overpayment or underpayment from Medicare and payment of the excess or deficit is not made within 30 days of the date of determination. The rate of interest to be charged or paid will be determined in accordance with regulations of the Secretary of the Treasury applicable to charges for late payments.

#### **Section 119** *Private Sector Review Initiative.*

Requires Secretary to undertake initiatives to improve review by intermediaries and carriers and to encourage similar review efforts and utilization control activities by private insurers and other private entities.

#### **Section 121** *Medicare Coverage of Federal Employees.*

Extends Medicare coverage to federal employees, who would be required to pay the hospital insurance portion of the FICA tax (i.e., 1.3% of earnings up to a yearly maximum). Employees of states and localities, including the District of Columbia, would continue to be exempt from FICA taxes.

#### **Section 122** *Hospice Care.*

Extends Medicare coverage to beneficiaries receiving services from a hospice. The legislation includes provisions for defined benefit periods, co-payments, required services, etc.

#### **Section 123** *Coverage of Extended Care Services Without Regard to 3-Day Prior Hospitalization Requirement.*

Eliminates the requirement for a 3-day prior hospital stay before skilled nursing facility coverage becomes available when the Secretary determines it will not lead to an increase in cost and will not change the acute care nature of the skilled nursing facility benefit. Authorizes limits for persons covered without a prior hospital stay on the scope or extent of services covered and on categories of individuals eligible. The 3-day requirement may be re-established if the Secretary determines that its elimination has increased program costs.

### **Subtitle B — Medicaid**

#### **Section 131** *Co-payments by Medicaid Recipients*

Amends the current law to allow states to charge, with certain limitations, Medicaid beneficiaries a co-payment for certain services. The legislation specifies the categories of Medicaid recipients which cannot be charged a co-payment and the services for which a co-payment may not be charged.

#### **Section 132** *Modifications in Lien Provisions*

Amends current law to allow states to file liens, with certain limitations, on real property, including the home, of institutionalized Medicaid beneficiaries. The legislation specifies occasions when a lien may not be imposed. Section also includes a provision which permits states, with certain limitations, to deny Medicaid eligibility for a specified time period to persons who dispose of their homes for less than fair market value.

#### **Section 133** *Limitations on Federal Financial Participation in Erroneous Medical Assistance Expenditures.*

This section deletes the Medicaid error rate provision and penalties incorporated in the 1980 Appropriations Act and substitutes language establishing a 3% target error rate for quarters beginning after March 30, 1983. At that time, states with eligibility error rates greater than 3% will have their federal matching funds reduced by the amount of the excess erroneous expenditures.

#### **Section 134** *Medicaid Coverage of Home Care for Certain Disabled Children.*

Provides states with the option of extending Medicaid coverage to certain disabled children age 18 or under who are living at home. States choosing the option must determine: that the child would have required institutional care, that providing care at home is appropriate, and the estimated cost of care at home is no more expensive than the institutional care would have been.

### **Changes Affecting PSRO Program**

#### **Section 143** *Utilization and Quality Control Peer Review Program.*

The PSRO Program is to be

modified by establishing the Utilization and Quality Control Peer Review Organization (UQCPRO) in its place. This incorporates essentially the elements of the Durenberger bill (S. 2141). The main provisions of the bill include the following. Eligible organizations may be proprietary or non-profit and may be either physician groups or have available sufficient physicians to perform review.\* Facilities and facility associations are excluded from participating; payor organizations may participate after 12 months. The Secretary will enter into performance contracts with UQCPRO's for 2 years, renewable biennially. Contracts could be terminated only after a panel had reviewed relevant data and information and had provided a recommendation to the Secretary. Contract non-renewals would not be

\*During the first 12 months of the program the Secretary is required to give priority to physician organizations. However, there is a possibility that the contracting provisions may be so restrictive as to discourage participation by physician organizations.

subject to termination panel procedures, but the UQCPRO would be able to present data and information on its performance. Geographic areas would be consolidated generally into statewide areas if annual Medicare and Medicaid admissions are fewer than 180,000. No local area could be established with fewer than 60,000 total (both public and private) annual admissions. UQCPRO's will be exempt from the Federal Freedom of Information Act, but must disclose relevant information to federal and state fraud and abuse, licensure and public health agencies. Sanctions will automatically become effective within 120 days if the Secretary fails to act upon UQCPRO recommendation. The dollar amount triggering hearings and appeals of review decisions has been doubled. Private review is facilitated by requiring participating Medicare hospitals to release data on patients of private payors who contract with UQCPRO's. The Secretary cannot terminate or fail to renew any PSRO grants until he enters into a contract with a UQCPRO for the area served by the PSRO. The UQCPRO program has

no provision for statewide or national councils.

## Summary Statement of the American Medical Association to the Health Care Financing Administration

RE: File Code BPP-192-FP. Notice of Proposed Rulemaking: "Medicare Program: Payment for Physician Services Furnished in Institutional Providers of Services," Federal Register of October 1, 1982 (47 FR 43578).

### November 5, 1982

On November 5, 1982, the American Medical Association submitted a 27 page statement to the Health Care Financing Administration calling for the withdrawal of the proposed rule concerning the establishment of criteria and maximum limits on reimbursement for physician services furnished to Medicare beneficiaries by "provider-based" physicians. In objecting to this rule, the AMA state-

ment dealt with six principal aspects of the proposed rule: 1) the statutory authority to justify extension of the use of "reasonable compensation equivalents" (RCE) to Part B of Medicare (reasonable charge); 2) the methodology for establishing the RCEs; 3) specific limitations on reimbursement under Part B for physician services; 4) further limitations on reimbursement for anesthesiology, radiology and physician laboratory services; 5) the potential for interference in contract arrangements between hospitals and physicians; and 6) the vague aspects and need for clarification.

### Statutory Authority

The proposed rule inappropriately extends the application of the RCEs to Part B reimbursement. This extension of authority has no basis in law, as the 1982 Tax Act only gave the Secretary of Health and Human Services the authority to apply the RCEs to physician services that are "for the general benefit to patients in a hospital or skilled nursing facility."

### RCE Methodology

The methodology for setting the RCE is fraught with errors. The methodology is based on inappropriate data, it fails to adequately represent physician income characteristics and the means for projecting future income does not account for numerous factors causing income variation.

### Physician Services

The proposed rule would create situations where a physician could directly furnish care to a Medicare beneficiary and be denied reimbursement from Medicare under Part B (charge basis reimbursement). This result is not authorized by the law, and it results in a redefinition of physician services in violation of the law.

The proposed rule would establish inappropriate limitations on lease and similar arrangements where the physician assumes some or all of the provider's operating expenses. As the proposal will not allow reimbursement to the physician for actual incurred costs, it could actually preclude lease agreements in the

future.

The proposal also fails to recognize legitimate variances in physician income. The proposal does not make any allowances for regional differences in physician income or differences that relate to individual skill, expertise and experience. It also fails to differentiate between the physician who supervises a department in a 30-bed hospital from the physician who supervises a department in an 800-bed hospital.

### Anesthesiology, Radiology and Physician Laboratory (Pathology) Services

The proposal would set limitations on anesthesiology that are not authorized by law, and it would establish standards for medical care that are in violation of (SS) (needs section character) 1801 of the Social Security Act.

The proposal would set an arbitrary cap on reimbursement for radiology services that is both inappropriate and not authorized by law.

The proposal would inappropriately deny Medicare reimbursement under Part B for clinical pathology

services. It also sets inappropriate standards for consultative services by denying Part B reimbursement where the pathologist reports on a test within the normal range or initiates the consultation.

### Contract Interference

The proposed rule eliminates an existing Medicare regulation that states that the Secretary is not to "specify or influence the provisions of the contract or arrangement between hospitals and hospital-based physicians." This provision is removed without any express authority, and its removal could indicate the Secretary's decision to dictate contract provisions between physicians and hospitals.

### Vagueness

Elements of the proposal are unnecessarily vague. No direction is given on major points such as the situation where the hospital acts as the billing agent or office location, and it has no specificity concerning the waiver procedure where an institution is unable to recruit or maintain an adequate number of physicians because of the RCE.

## Emergency! First Aid

**Condition:** Incidence of malpractice threats; fear of attacks on your professional abilities...even actual claims filed.

**Symptoms:** Rapid escalation of insurance premiums, lessening of policy benefits or coverage, poor policyholder service.

**First Aid Remedy:** PHONE HOME (CMS)...with questions regarding your CMS-sponsored program: COPIC (Colorado Medical Society's Professional Liability Trust).

Stability! Security! Service! Savings! All professional liability coverage! That's COPIC!

For detailed information and a personal consultation, complete the following form and mail immediately to CMS, 6825 East Tennessee, Bldg. 2, Suite 500, Denver, Colorado 80224.

## Beyond '84

*Deep into that darkness peering,  
long I stood there, wondering,  
fearing,  
doubting, dreaming dreams no  
mortal ever dared to dream  
before*

Edgar Allan Poe, "The Raven"

The future for medicine is not crystal clear. Like Poe, I stand peering and wondering. However, change is imminent. What is it to be? The shadows are out there —

prospective payment, contract bidding, competition from hospitals, etc. — and the pressures for change are here — business coalitions, PPO's, HMO's and cries for cost containment. I do not know into what shape the shadows finally will form. I do know that the physicians of Colorado must be aware of these demands for change and be prepared to deal with them.

How can we confront these pressures? How can we evaluate, adjust and promote those that are in the best interest of a proper mix of availability, cost and quality of

medical care for the citizens of Colorado? What structures are available to us? What organizations should we form? The organizations already are in place. They have been operational for many years as the Colorado Medical Society and the Colorado Foundation for Medical Care. They await your direction and fine tuning. They are your tools to shape your future and meet its challenge.

Through its many councils and committees, Colorado Medical Society represents you and supports your interests. It can promote your ideas through its Council on Legislation and lobbyist. Communication through the Public Information Committee will give proper representation of views and programs to lay persons and those in allied fields. The special committee for negotiations has had specific training to represent you whenever this discipline is necessary. The Council on Professional Relations and Medical Service stands ready to support you in matters regarding the medical profession and policies of the Society which affect the delivery of health care. Social and economic issues that significantly involve the physician and the delivery of health care in Colorado will be addressed and pursued by the Council on Socio-Economics.

The Colorado Foundation for Medical Care (CFMC) has had more than 12 years' experience in dealing with governmental and private agencies. It has a well-developed peer review system and is capable of establishing criteria and standards for that peer review. A sophisticated data system records many years of review within the state enabling comparison of our past and present performance and that of other states throughout the country. The majority of the Board of Directors of CFMC is derived from physicians throughout the state by regional representation.

The future of medicine in Colorado is not clear. Even though the shadows are out there, the organizations are in place and available to you to deal with their final form. It is up to you, the membership, to utilize these organizations. Take **positive action** and determine how you want them to act in your behalf. Direct and mold them into a potent force for medicine in Colorado.

On March 5-6, 1982, the Colorado Medical Society will hold its Interim Meeting of the House of Delegates. This meeting will be held at the University of Colorado School of Medicine. The site was offered by Medical School Dean Roy Schwarz to allow the physicians of Colorado an opportunity to visit the medical school during its centennial year. Participation in the meeting by the school and the students and tours of the facility are planned. On this special occasion a reflection on the role of the School of Medicine, particularly in relation to the practicing physicians of Colorado, is in order.

What is the role of the School of Medicine? First and foremost in the medical school's role is that of education of medical students. This basic function has not changed over the 100 years of the school's existence and is exemplified in the excellence of the yearly graduating classes.

Basic medical research is another primary function of the medical school. The University of Colorado has always been a leader in research and this is reflected in the high level of research grants obtained by the school.

One area in which the School of Medicine has been involved in the past has been the medical care of the indigent population in Colorado. Through the years the University Hospital has been looked upon by the Colorado physicians as a place to send difficult medical problems and to send the medically indigent. This is one area in which I see a change in the medical school's role. Medical care, including indigent medical care, has become very expensive. The University Hospital has gone through some trying times attempting to care for the needy and still remain solvent. Recently the University Hospital has had to limit elective admissions in an attempt to stay within its budget.

*Merlin G. Otteman, MD  
President, Colorado Medical Society*

I foresee the whole area of indigent care changing. There is a trend to keep this care at a local level. Each county or hospital district may be charged with caring for its own indigent. This means fewer referrals to the University of Colorado Medical Center. The increasing distribution of subspecialists throughout the state has made highly specialized care more available to the local communities. This again means fewer referrals to the Medical Center. The medical school recognizes this and has responded

by sending more students and residents out to local communities. This effort should be supported by the physicians of Colorado.

The University of Colorado School of Medicine can be proud of its first 100 years of service to the people of Colorado. I hope when the CMS Interim Meeting convenes at the medical school's Denison Auditorium we can further explore means for continued support and cooperation between the Colorado Medical Society and the University of Colorado School of Medicine.

**Rehabilitation Groups  
of the  
American Cancer Society  
Laryngectomy Association**

With the approval of the attending physician, trained volunteers who have had laryngectomy surgery, visit the patient. Personal experience and compassion enable the volunteer to communicate emotional support for learning to speak again. No medical advice is given.

## NCHSR Invites Research Proposals

Doctoral students whose dissertations address critical issues and problems in health services delivery are invited to apply for research grants from the National Center for Health Services Research

Applications will be accepted until March 1, 1983 from doctoral candidates undertaking studies on the organization, delivery, and financing of health services. Applicants must have completed all but the dissertation requirement and currently must be enrolled in a doctoral program in the social, medical, management, or health sciences. Each NCHSR grant for dissertation research is limited to \$20,000 in total direct costs, which may not be applied to tuition or fees. Funding decisions will be made by June, 1983.

NCHSR sponsors doctoral dissertation research to stimulate innovative studies on current issues and problems in health services delivery and to encourage new health services researchers. Funding is provided as part of NCHSR's research program, which is the major source of federal support for general research on problems related to the quality and delivery of health services. NCHSR is part of DHHS' Public Health Service.

Application procedures are described in "NCHSR Program Solicitation: Grants for Health Services Research Dissertations, 1983" (PHS) 83-3337. Copies of the brochure and application materials are available from the Grants Review Branch (Dissertations), NCHSR, Room 7-50A, Center Building, 3700 East-West Highway, Hyattsville, MD 20782, Telephone (301) 436-6920.

## Heaton Heads Medical Staff

Carl Edward Heaton, MD, anesthesiologist, has been elected President of the Saint Joseph Hospital medical staff. He is a past president of the Colorado State Society of Anesthesiologists, Member of the House of Delegates of the Colorado Medical Society and of the American Society of Anesthe-

siologists. Dr. Heaton is also a fellow of the American Board of Anesthesiologists and an associate clinical professor of anesthesiology at the University of Colorado Health Sciences Center. He joined the medical staff of Saint Joseph Hospital in 1958.

Carl Edward Heaton, MD

## The Deceptive Drug Addict

Excerpted from "Pharmafacts," published by the Oregon Medical Association Pharmacy & Drug Committee

***"When addicts are together, they're always trading tips on what doctors they've 'made;' what a particular doctor prescribes, how easy he is; and what drugs they noticed in his office..."***

The above quote came from an ex-addict who used the physician's prescription pad as a primary source of drug supply. There is no doubt that some doctors are unknowingly contributing to the growing problem of drug abuse. Those who use and deal in drugs would certainly prefer to obtain pharmaceutically pure medications from a druggist than pay ten times the price for an uncertain product on the street. Dilaudid, for example, the Cadillac of narcotics, costs \$30-40 per hundred over the counter. On the street, depending upon the supply, an addict might pay \$40-60 per tablet.

The most basic approach begins with the theft of prescription forms from a doctor's office or hospital

emergency room. The forger then writes in his name, his drug of choice, quantity and directions and scrawls a doctor's signature. If the DEA number is pre-printed on the form, this makes his job even easier. If the pharmacist doesn't call the doctor to verify the prescription, the forger can walk away with valuable drugs to sell and/or use. The Drug Enforcement Administration estimates that fraudulent prescriptions dispensed in 1980 accounted for some 135 million units of controlled substances. The answer? **Guard your prescription pads — remember that they are blank checks to the drug dealer or addict.**

The more subtle approach features the addict/dealer posing as a legitimate patient. Your best defense against getting "hustled" for drugs is to inform yourself. Even the most alert physicians sometimes get fooled. At a recent meeting for dental students that dealt with appropriate prescribing practices, a pharmacist made a presentation that enumerated the various schemes drug abusers might use. The next speaker, an ex-addict, could not resist: he pointed to the pharmacist and claimed, "I made you for a hundred Tylenol 3's back in 1978!"

The following tips on spotting the addict have been gathered from the written and verbal presentations of those who really know the territory — the ex-addicts themselves.

► Addicts often will present convincing evidence that they are suffering from some affliction that absolutely requires a particular drug for relief. You may be surprised to learn that one of the oldest and most commonly used schemes is still fooling MD's — that of alleged kidney stones. The "patient" will usually complain of pains on the left side, shooting into the groin and originating from the back. If you ask for a urine sample, the individual will often include some blood in the sample — usually the result of a pinprick on the finger that you will not notice. If you offer to hospitalize the patient, you will encounter resistance; many use the story that they have just started a new job and the insurance is not yet in effect. When you make the diagnosis of

kidney stones, the addict/dealer will generally offer that he is allergic to codeine and Talwin — angling for a stronger drug, usually Percodan, morphine or Dilaudid.

► Narcolepsy, being difficult to diagnose, is a favorite of those who abuse stimulant drugs.

► Be wary of patients asking for paregoric. They may complain of severe diarrhea or claim that a child

in the family is cutting teeth, is restless and in pain. It is simple to extract opium from paregoric; one ounce will yield a quarter grain of opium.

► When you are examining a new patient, be on the lookout for the usual signs of drug use; excessive yawning, sneezing and nervousness, pinpoint pupils, nose red from rubbing or scratching, unusual thirst or

slurred speech. Be alert to any new patient who comes complete with diagnosis and asks for pain relief as well as patients claiming to be from out-of-town who have lost or run out of their medications.

► If you are being asked to refill another prescriber's prescription for a controlled substance, contact the original prescriber, even if it is a long distance call. Simply explain to the patient that the charges for the call will be added to the bill. If you succeed in contacting the physician, call back one more time: you may have been speaking to an accomplice down the street. One of the most audacious schemes to occur in recent years involved a "doctor" who entered a major city hospital, announced to the desk that he was "Dr. So-and-So" and was expecting a phone call. When the verifying call came from the real physician, the situation appeared completely legitimate.

► Your best insurance is to conduct thorough examinations of new patients and take complete histories. If you can, ask the patient to remove his shirt. Then examine the backs of the arms, the shoulders, the forearms and the wrists for needle marks. Also, directly after taking a specimen of urine, examine the fingers for puncture marks, squeezing each fingertip in turn. When you're examining the ankles for swelling, look for more needle marks. Remember to look up the patient's nose. If you see atrophy or enlargement of a nostril, it's a good bet the patient has been snorting cocaine, heroin or THC.

## Grievance Of The Month

**Complaint:** Mrs. Agra Vatid wrote to the CMS Grievance Committee complaining that Dr. Magna Fie, a pathologist at Suburban Medical Center, had made an incorrect diagnosis and was therefore incompetent. Her letter stated that at SMC she had had a biopsy of a lump of the forearm done by her family physician, Dr. Friendly. The next day, based on the results of that biopsy, Dr. Friendly told Mrs. Vatid that she had "lymphoma." He recommended that she see Dr. Oncos, a hematologist, and in the mean time have a CT scan and bone marrow exam looking for other sites of "lymphoma." Before these things were accomplished, a neighbor, Dr. Overfence, in an over-the-fence conversation, suggested to Mr. Vatid that the pathologists at his hospital, Downtown General Hospital, were very astute, and would be happy to review the slides. Dr. Overfence felt that this review might be helpful because he knew from previous experience that the diagnosis of cutaneous lymphoma was a difficult pathologic diagnosis. This review was undertaken at DGH. The Downtown General pathologists felt that the lesion was non-specific chronic dermatitis. Thus, Mrs. Vatid concluded that some action should be taken to rid Suburban Medical Center of the incompetent pathologist who had made the incorrect diagnosis.

**Investigation:** In reviewing the case, the Grievance Committee found that Mrs. Vatid had called Dr. Friendly's office the day after the biopsy, asking for the diagnosis.

is. Dr. Friendly's secretary, Ms. Vera Frazzled, called her usual contact at the SMC Pathology Department, the department's receptionist, who then found the as yet unsigned pathology report which gave a diagnosis of "lymphocytic infiltration." This diagnosis was called back to Ms. Frazzled who made a note of "lymphomatous infiltration" in the office chart of Mrs. Vatid. She then alerted Dr. Friendly of this diagnosis. Dr. Friendly subsequently made the frightening phone call to Mrs. Vatid recommending that she see Dr. Oncos and obtain the CT Scan and bone marrow exam.

**Disposition:** A letter from the Grievance Committee was sent to Mrs. Vatid with copies to Drs. Friendly and Fie explaining the break down in communications at Dr. Friendly's office and supporting the competence of Dr. Fie in this case.

**Comment:** The undue concern suffered by Mrs. Vatid after she was told she had lymphoma, the flurry of activity and expense to refer and "refute" the alleged lymphoma diagnosis, the breach of credibility suffered by Dr. Fie, and the anticipated but luckily undone expensive and uncomfortable lymphoma workup, to say nothing of the time and effort expended by the Grievance Committee, all might have been avoided had Dr. Friendly either taken a moment to check with Dr. Fie to confirm the phone diagnosis or had he at least confirmed the diagnosis by reading the pathology report.

## Exclusive Contract Violates Antitrust Laws

In a landmark decision, the U.S. Court of Appeals in New Orleans ruled that an exclusive contract between a hospital and an anesthesiology group violated the Sherman Antitrust Act.

The court ruled that the closed-group policy was an illegal "tying" arrangement. Patients who wanted to be admitted to the hospital's operating rooms were compelled to purchase the hospital's chosen

anesthesia service. The judge ordered the hospital to appoint the plaintiff physician, a board-certified anesthesiologist, to its medical staff.

The plaintiff applied for privileges at the East Jefferson General Hospital, in Metairie, Louisiana, in July 1977. Both the credentials committee and the executive committee of the medical staff reviewed his application and recommended to the hospital governing board that he be appointed to the medical staff. The hospital board denied the application on the basis that the hospital had an exclusive contract with an anesthesiology group, composed of four physicians who supervised the nurse anesthetists who routinely administered anesthesia.

The U.S. district court dismissed the physician's suit, but the physician appealed. The appellate court found that the hospital had sufficient market power in the tying market for its services to coerce purchase of the tied product, anesthesia services, so as to render its exclusive contract an illegal tying arrangement.

According to the appellate court, the Sherman Antitrust Act proscribes tying arrangements only when they exhibit four characteristics:

1. The existence of two separate products, the tying product and the tied product, that a buyer should be able to obtain separately;
2. Sufficient market power in the tying market to coerce purchase of the tied product;
3. Involvement of a not insubstantial amount of interstate commerce in the tied market; and
4. Anticompetitive effects in the tied market.

*Hyde v. Jefferson Parish Hospital District No.2*, 686 F.2d 286 (C.A.5, La., Sept. 20, 1982).

## CMS Position on Nuclear Power Generation

*Prepared by William Hendee, Ph.D, and Roger Mitchell, MD*

**Editorial Note: Dr. Hendee is chairman of the Radiology Department at the University of Colorado Health Sciences Center. Dr. Mitchell is chairman of the CMS En-**

**vironment Committee. Initially, the position paper prepared by Drs. Hendee and Mitchell was reviewed, revised and subsequently approved by the Environment Committee. The paper was then presented to the Council on Public Health, which, after additional revisions, unanimously approved the statement at the Council's meeting on October 27, 1982.**

**The final draft of the position statement was presented and approved by the CMS Board of Directors at the Board's meeting on December 2, 1982.**

The CMS recognizes and stresses the great differences between nuclear warfare and the generation of nuclear power.

Opposition to nuclear warfare sometimes — illogically — leads to opposition to nuclear power.

The issues related to nuclear power generation are five:

1. The risk of the **accidental escape of harmful radiation** is exceedingly small. It does not approach, for example, radiation hazards and other hazards associated with the production and combustion of coal and petroleum fuels.
2. The risk of a **nuclear explosion** at a nuclear power plant is non-existent.
3. **Stolen nuclear fuel** could be converted to weapons grade plutonium by complex and cumbersome methods available essentially only to national governments; however, the risk of this process is very small compared to that of direct access to weapons grade plutonium through the nuclear weapons programs of various nations.
4. The safe **storage disposal of nuclear waste** is technologically quite feasible at the present time.
5. **Energy from non-renewable sources is currently overused.** More effort should be expended to conserve energy but practically, this objective is very difficult to attain without material incentives.

Use of energy from renewable sources (sun, wind, geothermal, biomass, sea water temperature differential, etc.) should be increased. However, current technology makes

these methods expensive and often impractical (e.g. providing electricity for major industry).

Our greatest current energy-related problem is our failure to enhance research and development in all potential sources of energy-renewable and non-renewable.

For these reasons, the Colorado Medical Society strongly supports the further safe development and use of nuclear energy for electricity generation and energy independence, while pursuing research and development of alternative sources of energy.

## The Year in Medicine — 1982

**Editorial Note: 1982 was a headline-making year in medical achievements. The following summary of important medical events was prepared by the American Medical Association.**

**Artificial Heart:** The surgery to implant the polyurethane plastic and aluminum Jarvik-7 heart into Barney Clark began late on the night of December 1, but it was not until early the next day that the mechanical pump was empowered by compressed air to support a human life. The historic event came one day short of the 15th anniversary of the first human heart transplantation.

**Nuclear Magnetic Resonance:** Called NMR for short, this technology and the machinery designed to apply it have the potential to revolutionize the way physicians look inside the body and the view they get. NMR works with magnets instead of X-rays, eliminating the need for injected contrast dyes and radioactive solutions on which older, established diagnostic technique depend.

The images are similar to those made by CAT scanners, in the sense that they are assembled with the aid of a computer and represent a cross-sectional view through an organ or an area of the body. However, the similarity ends there, for NMR is capable of displaying a kind of biochemical blueprint of cellular activity as well as pictures that are sharper and more detailed than

those produced by a CAT scanner.

Researchers predict that NMR will detect certain diseases at an earlier stage than is currently possible. Instead of showing physical alterations within the body, as conventional X-rays do (even when they are enhanced by a computer as CAT scanner images are), NMR can show the actual chemical imbalance that may precede structural change.

NMR imaging eventually may allow physicians to pinpoint tiny fat deposits on blood vessel walls before they become the focus for atherosclerosis; detect small cancers that have broken away from the primary site; measure the blood flow rates in specific locations in the brain to identify patients at risk for developing strokes; monitor the results of treatment without risking excessive radiation and examine the spinal column without injecting dye.

**Medical Lasers:** From their original use by ophthalmologists to weld detached retinas and seal leaking blood vessels in the eye, lasers continue to make inroads to areas of the body only the scalpel went before. Brain surgeons have used them to excise tumors; dermatologists focus the light-knife beams to eradicate skin cancer and gynecologists have found lasers useful in some diseases of the female genital tract.

A new type of laser, pioneered in Europe and called the YAG laser (for neodymium yttrium aluminum garnet), is being used more and more for sealing bleeding ulcers.

On the forefront of laser technology is the laserscope, in which the light is transmitted through fiberoptics in a small flexible tube known as a catheter. In experiments in the laboratory, a multi-channel catheter — with a laser beamed through one channel — is being tested as a way to vaporize clotted material in the arteries that feed the heart.

**Streptokinase:** This clot-dissolving enzyme was approved by the Food and Drug Administration this year for use in treating heart attacks. Given to appropriate patients in the early stages of a heart attack, the drug holds the potential for restoring circulation to a choked-off section of

heart muscle and for preserving the vitality of the cells that would otherwise die.

**Cyclosporin:** Much of the credit for the improvement in survival after organ transplantation and the resurgence of transplantation surgery is due to this drug, which was originally isolated from fungi in soil samples from Wisconsin and Norway. Cyclosporin suppresses the production of cells called T-lymphocytes that are in the vanguard of the body's natural attack against foreign tissue, even when that tissue is beneficial as it is in the case of transplantation.

#### **Genetically Engineered Human**

**Insulin:** Human insulin made with recombinant DNA technology by genetically modified bacteria won the Food and Drug Administration's approval for marketing this year. Although it will not be available until 1983, the bioengineered insulin is the first such product made by gene splicing to be marketed for use in humans.

#### **Synthetic Human Interferon:**

Gene-splicing techniques have led to the preparation of what promises to be an ample supply of interferon. In early clinical use, the synthetic variety has shown anticancer activity in patients with non-Hodgkin's lymphoma, breast cancer, chronic lymphocytic leukemia, Hodgkin's disease and melanoma.

The synthetic interferon used in the first of the studies, published in the March 26, 1982 *Journal of the American Medical Association* was produced by a laboratory strain of *Escherichia coli*, a common human intestinal bacterium that was engineered to contain the human gene governing production of interferon. As it divides and redivides into millions of cells, each bacterium serves as an interferon factory, manufacturing interferon that is identical in structure and biologic activity to the one produced by human white blood cells.

**Oncogenes:** A revival of a 10-year-old hypothesis with a startling "cart before the horse" twist is producing some of the most promising research ever into the mechanism of cancer. The hypothesis and the related

origin of the term oncogene (for cancer-causing gene) goes back to work done in the 1960s and early 1970s when certain viruses were found to have genes that cause cancer. The hypothesis held that infection of animal cells by such viruses leads to the incorporation of the so-called oncogene into the infected animal cell, which at some later date can become malignant.

This hypothesis took a surprising turn after research in recent years showed that oncogenes from viruses have identical counterparts in normal cells. It is now believed that the viral cancer gene — the oncogene — was captured from an animal cell sometime in the evolutionary past. In the current scenario, normal cells of animals and humans are thought to house oncogenes whose normal function is unknown. Under certain circumstances, it is hypothesized, these oncogenes could activate and lead to cancer.

**Hazards of Salt:** A coalition of health organizations, federal agencies and food processors joined forces and found a voluntary way in

#### **THIS IS YOUR LAST OPPORTUNITY**

Send your check or money order today to: 6825 E. Tennessee, Bldg #2, Denver, 80224. ATTN: Centennial Year-Book.

which reliable information about the sodium content of packaged foods could be made available to physicians and to their patients whose daily sodium intake must be limited because of high blood pressure. Now many food products have their sodium content clearly marked on the label.

**Lyme Disease:** The mystery of an illness that came to light in the summer of 1975 and was named after the Connecticut town where the first known outbreak occurred has been traced to a bacterium transmitted by

the bite of a tick. Lyme disease or fever has been reported to the West, Middle West and the East in the last six years. Its symptoms include aches and pains and a high fever that can lead, weeks or months later, to debilitating arthritis and sometimes meningitis. After years of searching, medical investigators identified the culprit as a spirochete, a type of bacterium that is susceptible to penicillin.

**AIDS:** That is the acronym for acquired immune deficiency syndrome, the official name for a peculiar mixture of diseases that was first detected in 1981. AIDS has reached epidemic proportions in the 18 months since it was recognized as a new disease entity. It is known to have killed more than 300 people, making it more deadly than Legionnaires' disease or toxic shock syndrome combined.

Among the 800 or so known to have been stricken by AIDS are at least one infant who died, a number of heterosexual women, some hemophiliacs, over 30 Haitian immigrants and numerous male homosexuals, who are in the largest

group of AIDS' victims.

The syndrome is the first known outbreak of a disorder that wipes out the immune system's defenses against disease, allowing a formerly rare type of cancer and what are called opportunistic infections to overwhelm the body.

As the search for the cause intensified late in 1982, experts at the Centers for Disease Control focused their attention on an infectious agent, such as a bacteria, a virus or another type of microorganism, as the possible source of the disorder.

**Elimination of Measles:** An intensive immunization program against measles, begun in 1962 when measles vaccine became available, has led to the virtual elimination of this childhood disease in the United States. The only causes of the disease that have recently occurred have been spread by individuals who have brought measles infection into the country from abroad. Before the effort to contain measles and eliminate it entirely can be wholly successful, immunization of those still unprotected against the disease has to continue.

# DOCS

DOCTORS OFFICE COMPUTER SYSTEMS

## DOCS WORKS FOR YOU, YOUR STAFF, YOUR PATIENTS.

DOCS is a computer system that has been designed to meet the needs of Medical and Dental professionals. Installing a computer programmed with DOCS means that your practice runs more economically. Fewer mistakes are made. You and your staff waste less time on tedious paper work. The result? Increased return on receivables, improved practice information, fewer delinquent accounts. And that's just the beginning.

Because the computer takes care of menial paper work, your staff has time for more important duties, and you have more time for your patients. DOCS is simple for your staff to use. The computer asks a question; your office person enters the answer. DOCS will question invalid numbers, process insurance forms, and prepare billing, just to mention a few functions. Your patients benefit, too. Patients are registered more quickly, their records are immediately available without searching for files, and accounts are kept up-to-date. DOCS does all this and much more.

### THE DOCS SYSTEM PROVIDES:

- ☐ Patient Inquiry
- ☐ Charge and Payment Entries
- ☐ Patient Super Bills
- ☐ Universal Claim Forms  
Blue-Shield — Champus • Medicare - Medicaid
- ☐ Detailed Aging Reports
- ☐ Selective Aging Reports
- ☐ Labels
- ☐ Collection Letters
- ☐ Alphabetical Computer Look-Up
- ☐ Practice Analysis
- ☐ Cycle Billing
- ☐ Audit Trails
- ☐ General Ledger
- ☐ Word Processing
- ☐ Tax Benefits;

## Follow-up of the Cancer Patient

by Ben Eiseman, MD; William A. Robinson, MD, PhD; Glenn Steele, Jr., MD (Thieme-Stratton Inc.)

**Reviewed by  
William R. Nelson, MD**

This is the third in a series of texts edited by Dr. Eiseman, who now, with Drs. Robinson and Steele, has come up with an excellent reference book for any physician taking care of cancer patients. The decision tree or

algorithm is a technique originating with Dr. Eiseman and may seem at first glance to be an oversimplification of a rather complex process concerning follow-up. However, by careful examination and by careful reference to the letter designations in each portion of the algorithm, it is possible to get down to the meat of the subject in the rather intensive discussions carried on by each of the authors.

Many of the authors are American authorities. Well known physicians in Sweden, Hong Kong and South Africa have written additional

chapters.

It is difficult to find any deficiencies in this publication which is meant as a guide and not as a final compendium of facts on cancer. However, there are certain details that are lacking. For instance, under melanoma, Gallium scanning is not mentioned. This is a method used successfully in the follow-up of melanoma patients who have poor prognoses. Under thyroid cancer, no mention is made of RAI treatment for obliteration of remaining thyroid tissue to aid future scanning for metastases. Under breast cancer, follow-up only once a year for five years seems to be inadequate.

One of the best chapters covers soft tissue sarcomas very thoroughly and succinctly, although the author does not define "Markers" in his Follow-up Schedule. Tumor markers for these neoplasms have not been reported to my knowledge. Finally, a distinct dividend in this text is a remarkably lucid discussion of Monoclonal Gammopathies. I would strongly recommend this publication for use as a guide by anyone whose practice includes many cancer patients.

## CMS Annual Trip to Washington, D.C.

*April 20-23, 1983*

"Beautifully organized, rare political educational experience" *Nancy Nelson, MD*. . . "Truly one of the most delightful trips I've ever been on, with the most congenial people I've ever met" *Telford Davis, MD*. . . "Format should be varied from year to year to maintain interest of 'old timers' and avoid boredom. Spouses are crucial to success of this effort" *Bill Reimers, MD*. . . "A rating of 10 for commitment and organization of leaders" *Ward Curtis, MD*. . . "Definitely repeat annually" *Ed Tennant, MD*. . . "Great experience" *Merlin Otteman, MD*

—Comments from 1982 participants.

Visit our nation's capitol. . . Meet with Colorado Congressmen. . . Participate in a Continuing Medical Education program. . . Join AMA officials for a briefing on medical issues.

**Reservations are limited—avoid disappointment**

Contact your CMS Government Affairs Division for further details by calling (303) 321-8590, Ext. 213.

**Register Now!**

Depart TWA 8 AM, Wednesday, April 20  
Return TWA 5 PM, Saturday, April 23

Singles: \$ 800  
Couples: 1400\*

Trip cost includes round-trip airfare, hotel accommodations, two complimentary continental breakfasts, one dinner, two luncheons, a cocktail party, transportation to and from airport, and the registration fee of \$200. Registration fee must accompany this registration form. Checks should be made payable to: **CMS Government Affairs Division, 6825 East Tennessee, Bldg. 2, Suite 500, Denver, Colorado 80224.**

Reservations are limited. Tour cost includes reservation services, planning and operational charges. Rates are honored on a prepaid basis only and are subject to confirmation.

\*Rates may be adjusted for individuals choosing to make the trip, but not attending all meal functions.

January 5th marked the beginning of the 1983 legislative session with 35 brand new law-makers seated. Included in the first 378 bills were 58 of interest to physicians, and a simplistic projection with a multiple of five would foresee 290 bills pertaining to medicine when the deadline for bill introduction occurs. The subject matter includes all sorts of allied practioner rights, all-inclusive child and adult abuse, mandatory child seat restraint, medically indigent insurance, right-to-die, workmen's compensation and Medicaid, early approaches to malpractice and insurance corrections. It is going to be a tough session for physicians with a final closing date calendared at June 28th. In between, important dates are: March 5th — deadline for members to introduce bills; March 25th — deadline for bills to be reported out of committee in house of origin; April 9th — deadline for bills to be passed by the house of origin; April 24th — deadline for bills to be reported out of committee in second house, and May 4th — deadline for bills to be passed by the second house.

Physicians are lucky in having Senator Martha Ezzard chairing the Senate HEWI committee and Representative Jim Lee chairing the House HEWI committee. Most of the bills we care about will be heard originally in their committees, and we are fortunate in the makeup of those committees.

Senate HEWI Committee Members: Ezzard, Chairman; Allard, Vice-Chairman, Baca-Barragan, Peterson, Phelps, Traylor and Wells.

House HEWI Committee Members: Lee, Chairman; Larson, Vice-Chairman; Burkhardt, Dyer,

Markert, Owens, Pankey, Paulson, Schauer, and A. Taylor.

Please call the CMS Government Affairs Division (321-8590) if you know any one of these legislators — they will be very important to us this year! With your help we will win it!!

The CMS Legislative Digest will be mailed on a regular basis to component and specialty society chairmen and executives, the CMS Board of Directors and KeyContacts. If you would like your name added to the mailing list, please contact the CMS Government Affairs Division.

## Is there a doctor on the road or at the game?

The Committee on Medical Aspects of Sports of the Colorado Medical Society hopes to hear from physicians who share its members' interest and concern about medical coverage of running events and interscholastic athletic contests.

Please let us know if you are interested in participating in your community.

## Report of the AMA Delegation on the 1982 AMA Interim Meeting to the Reference Committee on Board of Directors and Executive Office

The AMA House of Delegates met in Interim Session in Miami, Florida, December 5-8, 1982, in a meeting largely housekeeping in nature. One would have to characterize it as productive in a quiet, solid way, but devoid of the pyrotechnics that occasionally enliven AMA meetings.

In general the subjects discussed are those of current importance to all of us and included federal reimbursement of Medicare and Medicaid, the use of DRG's as a reimbursement tool, revamping of the federal peer review system, the relationships of a physician and his hospital, increasing competition in the medical market place, the problem of cost shifting, membership recruitment and retention, the structure of the House of Delegates and numerous other issues of special concern.

One of the rather unhappy side effects of our times is the fact that much of the subject matter discussed at local, state, and national meetings lies in the realm of socio-economics. AMA meetings are no exception and a great deal of time was spent discussing the profession's response to governmental agencies and programs. The FTC battle continues with some success on medicine's part in an attempt to curb this agency's rapacious appetite for regulation of the profession. The passage of the Luken-Lee amendment in the House of Representatives was a genuine victory for organized medicine, although similar success in the new Senate is

not assured. Since government now pays over 40 percent of the medical cost in this country and is now trying to curb the rapid expanding federal deficit by changing reimbursement methods, this engendered a great deal of lively discussion. Of great concern to all third party payors is the potential exacerbation of the current cost shifting that will occur if these new reimbursement mechanisms do not adequately reflect the federal patient's just share.

Membership continues to increase in the AMA although not proportionately to the increasing number of physicians. Fortunately the younger physicians, both students and residents, are joining in increasing numbers and they are very much in evidence at Reference Committees and on the floor of the House. Student concerns such as loan programs, tuition costs and residency openings were addressed and, in general, their positions are supported. It is a tragic fact the costs of medical education were exploding at the same time that money available for loans and scholarships is decreasing and it could place the medical degree out of reach for all but the wealthy.

Areas of potential conflict are appearing between physicians and their hospitals with the appearance of alternative delivery settings such as free standing clinics, emergency treatment and diagnostic centers and other forms of patient catchments areas sponsored or owned by hospitals. This will undoubtedly

become an item of increasing concern and debate at future AMA meetings.

Alternative delivery systems, or ADS's, also continue to be a topic of concern, with PPO's, or Preferred Provider Organizations, of immediate interest. Colorado has had some experience with PPO's especially in the Metro Denver area and our experiences were of some value to the discussions. The change in the federal government's approach to peer review with the repeal of the PSRO amendment and the adoption of the PRO-Durenberger approach engendered some lively discussion. The general attitude of the AMA House of Delegates was to encourage state medical societies to seize control of the PRO program unless it would require the physicians to reduce utilization in a way incompatible with quality.

These are the macro-issues. Minute details of the many other items discussed and disposed of would make this report too lengthy. Let it suffice to say that each meeting has its high and low points and leaves those of us who directly participate constantly aware of the need to strengthen our national voice and modify it if we disagree with certain policies.

Joseph L. Kovarik, MD  
William Y. Takahashi, MD  
Leo J. Nolan, MD  
Joseph S. Pollard, Jr., MD  
Robert B. Sawyer, MD

**You may think these physicians  
are working alone.**

## **But they really have a team behind them.**

These physicians spend most of their day working independently in a one-to-one doctor/patient relationship. And chances are that as a physician, you do too.

But even though you can't see it, there's a strong team supporting and protecting the medical profession, affecting your practice while you see patients, research new drugs or perform surgery. That team consists of *your medical societies*.

The American Medical Association and your state and county medical societies believe in the value of teamwork; that only by working together can we, in the face of an increasingly complex professional environment, protect your right to make responsible decisions on how to practice medicine.

We also believe that all medical societies — county, state, and national — have certain tasks that the individual physician couldn't possibly assume — and shouldn't have to.

Tasks such as keeping government regulations from interfering with your practice by representing your interests at local and national levels. And challenging regulatory measures that threaten you and your patients' interests by mounting legal campaigns to defend your rights — up to the Supreme Court if necessary.

Why do we believe that *teamwork* means so much to *all* physicians — even those who work "alone"?

Because ... IT WORKS.

### **Join Your Medical Societies Today.**

## Infant Formula: Questions and Answers

*Prepared by  
the Infant Formula Council*

**Q.** Why do some infant formulas contain more iron than others?

**A.** A healthy baby born after a normal, full-term pregnancy generally has enough iron stored in the body to meet iron requirements for the first four to six months of life. Before this iron is depleted, iron should be supplied in the diet, usually starting by at least the fourth month. Formulas that contain 1 mg or less of iron per 100 calories do not provide enough iron to meet an infant's needs after iron stores are depleted. These formulas are labeled with the statement that iron from other sources should be supplied to the infant.

Both iron-fortified and non-iron-fortified formulas are available so that physicians can recommend the formula that best fits an individual infant's needs. Parents should check with their physician before changing formulas or switching to cow's milk.

**Q.** How much sodium is in infant formula?

**A.** The sodium level in infant formula complies with recommendations made by the Committee on Nutrition of the American Academy of Pediatrics and that required by the Infant Formula Act of 1980.

The amount of sodium in standard, milk-based infant formulas ranges from 150-280 mg of sodium per liter of formula. Sodium in soy-based formulas ranges from 200-320 mg per liter of formula. The same volume of whole cow's milk contains over 500 mg of sodium. The amount of sodium in infant formulas meets nutritional requirements

without stressing a healthy infant's kidney system.

**Q.** Why shouldn't I use cow's milk before my baby's first birthday?

**A.** Cow's milk is a poor source of iron and iron deficiency anemia is the most common nutritional problem in infants. Cow's milk that has not been specially heat processed (such as the heat processing used in infant formula) can cause intestinal blood loss in some babies. Iron is lost with the blood. Also, the levels of protein and sodium in cow's milk are higher than recommended for infants. Additionally, cow's milk is low in vitamin C, vitamin E and copper. Further, cow's milk contains butterfat which is hard for a baby to digest. For these reasons the Committee on Nutrition of the American Academy of Pediatrics recommends that breast-feeding or infant formula be continued during the first year of life.

**Q.** Should I give my baby skim milk or 2% milk?

**A.** No. Skim milk and 2% milk should not be used for children under one year of age. These low-fat milks contain too much protein and sodium for an infant and do not provide enough calories from fat to meet a baby's energy needs.

Even when a baby is overweight, low-fat milk should not be used. Rather, overweight babies generally need the same kinds of foods as normal weight babies; however, the amount of food may be controlled under medical supervision. A slight reduction in calories (as prescribed by the physician) gives the baby a chance to grow into his or her normal weight category without compromising the baby's health.

**Q.** How can I tell if my baby is taking enough breast milk or infant

formula?

**A.** In a healthy baby, one way to determine if a baby is drinking enough formula or breast milk is to monitor growth. During the first year of life, the physician will see an infant many times and will keep a continuing record of the baby's weight and length. By checking this growth pattern the doctor will know if an infant is taking too much or too little formula and/or solid foods. Of course, there are many other factors that influence a baby's growth pattern that the doctor will consider. Generally, infants double their birth weight by about four or five months of age and triple their birth weight by about the first birthday.

On a day-to-day basis, a healthy infant will suck vigorously when hungry. When sucking and swallowing slow down considerably or stop, the infant usually has had enough. Some infants when full will push the nipple of the breast or bottle out of their mouths with their tongues. To decrease the likelihood of overfeeding, it is wise to stop feeding the baby at this time rather than encouraging further suckling or finishing the entire bottle.

**Q.** Should I give my baby extra vitamins while he is drinking formula?

**A.** Iron-fortified formulas as nutritionally complete and additional supplements are generally unnecessary. A physician may recommend an iron supplement for infants not receiving iron-fortified formula. Additionally, in communities with a non-fluoridated water supply, fluoride supplementation may be prescribed. The need for vitamin and mineral supplements should be determined by the physician based on the individual needs of each

infant.

**Q.** How can I tell if my baby is growing properly?

**A.** No two babies are alike. Many things influence an infant's growth, including length and weight at birth, heredity, sex and nutrition. A physician will check to see if a baby is growing properly by measuring and plotting his or her growth (weight and length) on a standard chart. This chart was made by carefully studying growth patterns in a large number of children. The physician can then tell if the baby is growing properly.

In general, you can expect an infant's weight at birth to double by about four or five months of age and triple by about the first birthday. In the first year a baby generally grows in length by 10 to 11 inches.

**Q.** Should I put my baby to sleep with a bottle?

**A.** No. There are many reasons why it is unwise to put a baby to sleep with a bottle filled with formula, juice, sweetened water or other beverages. Tooth decay is a major problem associated with this feeding practice. As a baby tires, sucking and swallowing slow down. The sugar or carbohydrate of the beverage in the bottle form liquid pools around the teeth which can eventually lead to tooth decay. Also, using a bottle as a pacifier can lead to a excess intake of calories, which could cause the baby to become overweight. Finally, an infant whose bottle is "propped" misses out on the close contact and security associated with holding a baby close to you during feeding. If you must use a bottle at bedtime or naptime, fill it only with water.

**Q.** What is the difference between milk-based and soy-based formulas?

**A.** The protein in milk-based formulas comes from cow's milk which has been specially heat treated, making it easy for a baby to digest. Soy-based formulas are milk-free; the protein in these formulas comes from a soy-bean source which also is easy for a baby to digest. Some babies are sensitive or allergic to the protein in cow's milk and these babies may have a variety of reactions to cow's milk-based formulas. Due to these reactions, the infant's physician may recommend a soy-based formula. A sensitivity to cow's milk is usually not a permanent condition.

**Q.** How do you remove infant formula stains?

**A.** Try not to let the stain dry. Immerse in cold water and let soak. When convenient, wash with a cold water soap.

**Q.** What are the advantages of breast-feeding?

**A.** Breast milk provides an infant with the proper balance of nutrients required for growth and development without straining an infant's developing digestive and kidney systems. Breast milk also contains substances that help protect infants from certain diseases. Nursing is convenient since breast milk is always available and does not require preparation or storage. Additionally, both mother and infant can benefit psychologically through this close and warm interaction. The Committee on Nutrition of the American Academy of Pediatrics recommends breast-feeding as the preferred mode of feeding. It also notes: "When breast-feeding is unsuccessful, inappropriate or stopped early, infant formulas provide the best alternative for meeting nutritional needs during the first year."

## ROCKY MOUNTAIN MEDICAL JOURNAL

Copies are still available of the special Centennial Year Book edition of the Rocky Mountain Medical Journal. This edition commemorates the 100th anniversary of the University of Colorado School of Medicine.

Take a look back through the school's colorful history and a look forward into the next century of one of the United States' outstanding medical teaching and research institutions.

Cost is \$8.40 per copy, prepaid, including tax, postage and handling. For more information contact:

**Colorado Medical Society**

# Roy Cleere & Florence Sabin

*James J. Delaney, Jr., MD, Historian, Colorado Medical Society*

*This month we profile two people who have most influenced public health in Colorado in the last half century, Florence Sabin and Roy Cleere.*

## **Roy Cleere, MD**

When Roy Cleere was appointed Director of the Division of State Health in 1935, public health was administered by a few political appointees and governed by antiquated health laws passed in 1876. Colorado had an unjustified reputation as a health mecca. In prescientific medicine days, many people had come to Colorado to seek a cure for tuberculosis. The climate was supposed to have magical healing powers and public health laws were administered as if this were true. Colorado was anything but safe in which to live. It ranked among the leaders in mortality rate from infectious diseases. The majority of communities in the state had inadequate water and sewage treatment facilities.

Roy was born in Madisonville, Texas on December 20, 1905. He entered Abilene Christian after finishing high school, and then transferred to Texas A&M where he was graduated with a BS Degree after only two years. He entered the University of Texas Medical Branch at Galveston and received his MD Degree in 1929. He spent one year as an intern at Kansas City General Hospital where he met his future and devoted wife. She was head nurse of the O.R. at the time. He had a standing invitation to practice in Denver with Dr. Paul Conner, an old friend of his father's. Dr. Conner was fairly influential in Denver at the time. Roy spent his first year here as a resident at Presbyterian Hospital

and then started practice with Dr. Conner. Like many young practitioners of today, he supplemented his income by working in a venereal disease clinic.

In 1935, the Board of Health recommended to Governor Edwin Johnson that Roy Cleere be appointed to head the Division of Public Health. He accepted the job on a trial basis and said if he liked the job he would need a leave of absence to get a MPH Degree, which he earned at the Johns Hopkins University in 1936. During the early years of his work he was handicapped by a political patronage system and shortage of money which made his work difficult.

For a time in 1940 he was denied his salary in an attempt to force him from office. Again in 1946 he faced a challenge for his job when the State Civil Service Commission conducted the first examination required of the chief executive officer of the Health Department. He scored highest and maintained his directorship. Over the years, with the help of Florence Sabin, CMS, Federal funds, and able leadership, public health in Colorado has advanced to its current status.

Roy was never free of political pressure and was forced to resign in 1973 after 38 years in office. He claims to this day he is still not sure why his tenure in office was terminated. At the time of his resignation, he was the dean of public health officers in the United States.

Today Roy lives comfortably in his home of many years in East Denver. He has completely recovered from cancer surgery and seems as enthusiastic about life and public health as ever. He is most proud of his having introduced professional,

formally educated public health people into the service of the State of Colorado.

## **Florence Sabin, MD**

I suspect that the majority of people living in Colorado now have no idea who Florence Sabin was, and yet we owe her an enormous debt of gratitude. She was a Colorado native, born in Central City in 1871, a superb medical educator who taught at Johns Hopkins and a world renowned medical researcher at the Rockefeller Institute. She retired from professional life in 1938 to return to Colorado to care for her sick sister and live out her life in peace. However from our point of view her most important contribution to the state began when she was 73.

Her mother died of complications of childbirth when Florence was seven years old. Her father, a physician, was unable to care for her and her sister so she was sent to live with an aunt and uncle in Chicago. She attended boarding school in Vermont and was graduated from Smith College in Massachusetts. She grew up during the early years of the developing science of medicine and with the encouragement of Mrs. Ella Strong Dennison, wife of the famous Denver physician, eventually was able to enter medical school. The Johns Hopkins School had recently been founded and set the standards for modern medical education. She easily met the qualifications for admission and enrolled in 1896. She was a superior student and was selected to be one of four interns on Osler's service after she graduated. She remained at Hopkins until 1925. During that time she became the first woman full professor in an American medical school and did outstanding research in both gross anatomy and histology. She was revered by faculty, staff and students.

She accepted a position in the Rockefeller Institute of Medical Research in the Department of Cellular Studies. She and her colleagues did basic research on blood and tuberculosis and were primarily responsible for outlining the basic processes of immunity and antibody formation. She was forced to retire at age 67, which was Institute policy. She returned to Colorado to care for her ailing sister and live out her life

pursuing her vocation — reading.

In 1944, Governor John Vivian was setting up Post War Planning Committees and at the suggestion of Francis Wagner, a *Denver Post* reporter, appointed Florence as chairman of the Health Planning Committee. As pointed out earlier, public health was under the patronage of the political establishment. Before making his appointment of Florence, he inquired about her political persuasion and was assured that she was a nice old lady who would cause no problems — how wrong this assessment was. Florence never did anything without striving for excellence. For more than a year and a half she studied the health problems of Colorado, compiled a list of influential leaders in the state and laid her plans to improve public health in Colorado. Her research revealed the appalling fact that mortality rates in Colorado were among the highest in the country. On March 29, 1946, she launched her campaign to upgrade public health in Colorado. She hosted the first of many dinner parties given at her own expense. She and her committee drew up eight bills for legislative consideration. She lobbied tirelessly for these bills,

traveling extensively throughout the state. In 1947, six of these bills were passed by the Legislature. Not being satisfied with these accomplishments, she undertook a new campaign to improve the public health of Denver. In December, 1947, she was appointed Manager of Health and Charities by Mayor Quigg Newton. This job carried a salary. She protested to no avail, and so she donated her salary to the University of Colorado to be used for research. Sweeping changes were carried out under her direction and she retired again, this time for good, in 1950 at age 79.

On November 9, 1951, her eightieth birthday, she was honored when a million-dollar building for cellular research at the University of Colorado School of medicine was dedicated in her honor. This building is part of the southwest wing of the old medical school. The auditorium in the basement is also dedicated to her.

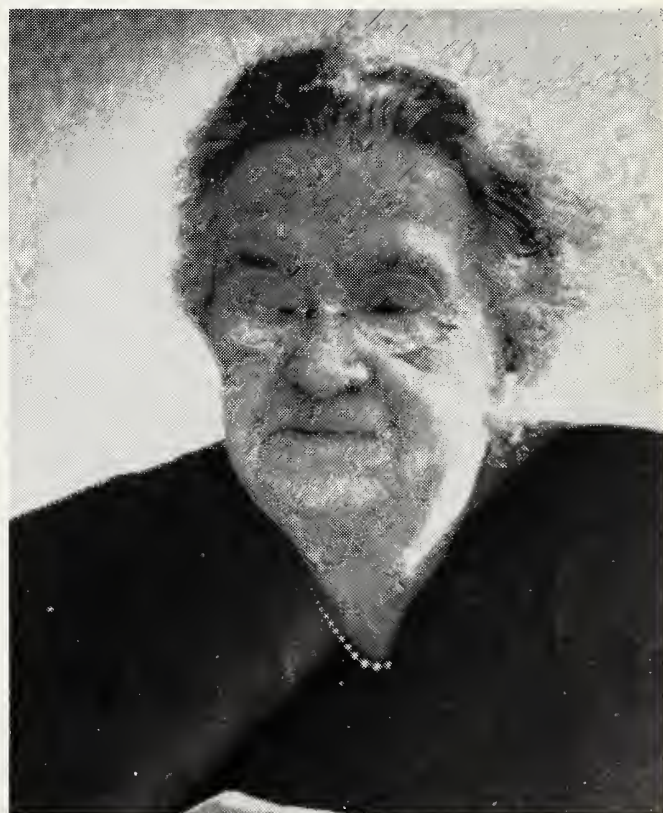

During the fall of 1952, while watching a World Series game on television, she suffered a fatal heart attack. Her long productive life had come to an end, but her contributions to her native state will live on for a long time to come. Shortly after

her death, a drive was begun to honor her in perpetuity by commissioning a statue of her to be placed in the Statuary Hall in the nation's Capitol in Washington, DC (each state may place one statue in this hall). The statue was dedicated in the Capitol Rotunda, February 26, 1959. CMS was recently given several hundred hard-bound copies of the book commemorating the acceptance of this statue. The State Historical Society was the donor of these books. They are available for distribution from CMS on a first come, first served basis. For those interested in learning more about Florence Renee Sabin, I suggest her biography written by Elinor Bluemel, a copy of which is available in most local libraries. Also see the *Rocky Mountain Medical Journal*, April, 1962.

Students of public health in Colorado realize that there is still much to be done. The public's health is jeopardized by the problems of hazardous waste disposal, air pollution, and water purity. On the other hand, they revere the accomplishments of the two people profiled here and remind us that our lives are much safer today because of their dedication and accomplishments.

# Newborn Screening for Genetic/Metabolic Diseases in Colorado

by Robert S. McCurdy, MD, MPH, Director of Medical Affairs and Special Programs,  
Colorado State Department of Health

Newborn screening for Genetic/Metabolic conditions is an appropriate public health program since it provides for early diagnosis, prevention and treatment of chronic, costly disabilities and handicaps and possible death. It also enables the State and its citizens to avoid unnecessary expenditures of public and private funds on preventable conditions and conditions which can be minimized by early diagnosis, treatment, counseling and proper management.

## History of Newborn Screening in Colorado

Although done earlier in some hospitals, screening for genetic metabolic diseases in the newborn started on a large scale in Colorado in 1965 with passage of a law requiring all newborns in the State to be tested for Phenylketonuria (PKU).

Beginning early in 1979 with the advent of new, automated laboratory techniques for screening, along with the development of simpler techniques for screening for some conditions, e.g. congenital hypothyroidism, centralized and regional newborn screening became feasible and cost effective. Since March, 1979, newborn infants in Colorado have been screened for six conditions: PKU, congenital hypothyroidism, Galactosemia, abnormal hemoglobins, Homocystinuria and Maple Syrup Urine Disease.

## Screening System in Colorado

1. An automated Newborn Screening Laboratory was established in the Colorado Department of Health Laboratory Division in Denver with equipment purchased with a federal grant. Several months were required

to obtain qualified staff, develop familiarity with equipment and techniques, have numerous "trial runs," and obtain licensure from the Center for Disease Control in Atlanta following on-site inspection. On March 1, 1979 testing began for the six conditions mentioned above of all infants born in Colorado.

2. The laboratory sends out forms, educational pamphlets, Informed Consent forms and mailing envelopes to the hospitals, physicians and local health departments in the State.

3. A blood specimen is obtained by heel puncture from the newborn infant with enough blood being obtained to saturate four small circles printed on the blotter part of the laboratory form. The form is then mailed without delay to the Laboratory in Denver.

4. The time of obtaining the specimen is extremely important. It should be obtained just prior to the infant's discharge from the nursery, except in the case of a premature infant who is expected to stay longer. In such cases the specimen may be obtained at seven days of age.

5. A second specimen, solely for PKU, is recommended to be taken at the age of seven to 14 days if the first specimen is taken prior to the infant becoming 48 hours of age. Presently, approximately 50% of infants are having a second PKU test done.

6. After the specimen is received and processed in the laboratory, the results are reviewed and if any one or more of the six tests is abnormal, the hospital or physician whose name appears on the laboratory form is immediately phoned by the laboratory. This is done on **all** abnormal screens. At the time the result is telephoned, the hospital

person or physician is also given the name or names of consultants who may be contacted for further guidance and information if desired. (In addition, the names of the consultants are also printed in the newsletter which goes out to all users of the laboratory.)

7. At the time of telephoning the abnormal result, the laboratory re-emphasizes the necessity of obtaining a diagnostic test on the infant to confirm, or not confirm the abnormal screening test. It is emphasized that the screening test is non-diagnostic, and if abnormal, must always be followed as soon as possible by a diagnostic laboratory test.

8. Final diagnosis and initiation of treatment or counseling must await the results of the confirmatory test and the physician's diagnosis. However, treatment may be started immediately after obtaining a blood specimen for a confirmatory test as this may save valuable time. There should be no delay in obtaining the confirmatory test, and whenever the infant's physician is uncertain as to how to proceed, consultation should be obtained immediately.

The goal of the program is to have confirmed cases of PKU, Galactosemia, Maple Syrup Urine Disease or Homocystinuria under treatment by two weeks of age or sooner. Cases of Hypothyroidism should be under treatment before one month of age.

The confirmatory diagnosis of an abnormal hemoglobin, e.g. Sickle Cell Disease, can probably best be made when the infant has reached the age of three to five months. At that time if the diagnosis is confirmed, counseling can be initiated in order to decrease morbidity and mortality.

It is also important that families of confirmed cases be referred for genetic counseling, except in the cases of Hypothyroidism, since only 10% of those cases are on a genetic basis.

9. A written report of all results, both positive and negative, is returned by mail to the physician or hospital named on the laboratory form.

10. It should be noted here that the laboratory at the Health Department is actually a regional one and does similar tests for all newborns in Arizona and Wyoming.

**Followup**

All abnormal screens are followed up by letter and/or phone call in order to obtain the necessary data to evaluate the effectiveness and efficiency of the program. In addition, all confirmed cases of disease will receive long-term follow-up by mail and/or telephone to determine the progress and status of the affected infants at various ages following diagnosis and treatment.

**Legislation**

At the onset of the six-test screening program in 1979, participation was voluntary and it is estimated that 90% + of all infants in the state were tested under this voluntary program. Effective July 1, 1981, the six tests were required by Colorado state law. The second PKU test is recommended, but not required by the law. It should be noted that under the law it is the responsibility of the hospital to forward appropriate specimens to the laboratory. However, in case of a birth taking place outside of the hospital, it is the responsibility of the physician, nurse-midwife or other health professional attending the birth to collect and forward the specimen to the laboratory.

**Costs and Financing**

From March 1, 1979 until July 1, 1981, the costs of the screening program were borne largely by a federal "need" grant. Beginning in July, 1981 the program has been financed through payments by the users (hospitals and physicians). Payment may be made by purchasing "stamps" in advance which are attached to the laboratory form, or by making payment upon being billed

after the testing is completed. Presently, the charge made to the user by the laboratory (which is equivalent to the laboratory costs) is \$5.00 per infant for a pre-paid stamp, and \$5.50 if billed for the initial six-test screen. The charge for a second PKU test is \$2.00 prepaid and \$5.00 if billed. The only additional cost to the family is the charge made by the hospital for collecting and mailing the specimen. In most cases, the charge is covered by in-

surors or third-party payors.

**Results**

At the end of the first three years of the testing program, the results in Colorado were as follows:

- 1. Number of infants tested (from March, 1979 through February 1982) was 145,854.
- 2. Number of cases of disease confirmed: 56.
- 3. Other abnormal conditions confirmed: 611.

4. The incidence of cases of confirmed disease:

	Infants Tested
Hypothyroidism: .....	1:5,610
PKU: .....	1:13,259
abnormal hemoglobin: .....	1:9,724
Galactosemia: .....	1:72,927
Homocystinuria: .....	1:145,854
MSUD .....	1:145,854

5. The actual number of cases of diseases confirmed were:

Hypothyroidism: .....	26
Abnormal hemoglobin disease: .....	15
PKU: .....	11
Galactosemia: .....	2
Homocystinuria: .....	1
MSUD: .....	1

6. The incidence of the total confirmed cases of all six conditions combined was: one confirmed case for every 2,605 infants tested.

7. Average age of the infant when treatment was initiated was:

	Days of age
Hypothyroidism: .....	18.0
PKU: .....	12.5

8. It should be noted that during the three-year period, one case of PKU was diagnosed only by the routine second test done since the first test done on that infant was negative.

**Cost Effectiveness**

It can be seen by the above data that these six conditions are not as rare as once thought. In fact, the combined incidence of all of the six conditions (one case for every 2,605 infants tested) was considerably higher than the incidence of polio in the general population during the "epidemic" days prior to the advent of polio vaccine.

A study done by the United States General Accounting Office (GAO) in 1977 carried out a study of the costs vs. benefits of a multiple screening program of newborns for genetics/metabolic conditions. The study concluded that there was a benefit of \$8.70 for each \$1.00 spent on such a program. The GAO report

also state "we recognize that the benefits screening are understated in our analysis." Using the same methodology as the GAO study, the Colorado Department of Health analyzed the benefits and costs of the Colorado Newborn Screening Program and estimated that \$7.90 was saved for each \$1.00 spent. Other studies have been done and have come to a similar conclusion that such programs are definitely beneficial from the cost standpoint alone.

**Future of the Newborn Testing Program**

Undoubtedly, as further technological advances are made in both the clinical and laboratory areas, it will be appropriate to add additional

is still available, providing 100 years of history of the University of Colorado School of Medicine and the continuous involvement/support of the Colorado Medical Society.

This Year-Book of the Centennial is also the last publication of the Rocky Mountain Medical Journal, so it should be a "must" for your personal library.

To order: send check or money-order in the amount of \$8.40 to Colorado Medical Society, Bldg. #2, Denver, 80224. Last publication. First come, first served!

tests to the Newborn Screening Program. At the present time, the Pediatric Microchemistry Laboratory at the University of Colorado Health Sciences Center is carrying out a two-year study of newborn screening for Cystic Fibrosis in Colorado. Using an unused blood spot from the Health Department's Newborn Screening Laboratory, the Pediatric Microchemistry Laboratory is carrying out a test for Immunoreactive Trypsinogen. It is hoped that this procedure will enable a very early diagnosis of infants with Cystic Fibrosis, followed by early counseling, education and treatment. This study has been funded by the Cystic Fibrosis Foundation. If the results are favorable, consideration will be given to adding the Cystic Fibrosis test to the present multiple screening tests being carried out on all newborns. This could be extremely important since Cystic Fibrosis is one of the most common congenital genetic/metabolic defects.

**Summary**

Newborn screening for genetic/metabolic conditions in Colorado began on a large scale in 1965, with

mandatory testing of all newborns for PKU. Beginning on a voluntary basis in March, 1979, Colorado has screened newborns for six genetic/metabolic conditions (PKU, Congenital Hypothyroidism, Galactosemia, Abnormal Hemoglobins, Homocystinuria and Maple Syrup Urine Disease) through a centralized Newborn Screening Laboratory at the Colorado Department of Health in Denver. A state law was passed, effective July 1, 1981, which required the testing for all newborns. From March, 1979 through February, 1982 there were 56 infants picked up through positive newborn screening tests and confirmed as having one of the six conditions. Treatment and/or counseling was instituted at an early age, thus preventing and/or minimizing long-term handicaps or death.

It is estimated that \$7.90 are saved in public and private expenditures for each \$1.00 in program costs.

Additional tests may be added in the future which will further add to the public and private benefits and the cost effectiveness of the program.

## February

**Feb 23-Mar 1 Adolescent and Young Adult Medicine** — Wailea Beach Hotel, Maui, Hawaii. Sponsored by Hurley Medical Center, Department of Continuing Medical Education, One Hurley Plaza, Flint, Michigan 48504. (313) 766-0142. 20 hours of credit.

**Feb 27-Mar 4 Infectious Diseases & Rheumatology** — Given Institute, Aspen, Colorado. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 E. 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241

**Feb 28-Mar 4 Current Concepts in Pain Management** — Steamboat Springs, Colorado. Guest may attend associated tax program (expenses deductible). Fee: \$250.00, Guest \$100. CME accredited. Contact D. Berman, MD, Program Director, Current Concept Seminars, 3301 Johnson St., Hollywood, Florida 33021. (305) 989-6650.

**Feb 28-Mar 4 13th Annual Aspen Radiology Conference** — Aspen Institute for Humanistic Studies, Aspen, Colorado. For information contact Bernard A. Karshmer, MBA, Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. Phone: (303) 629-5333 or (800) 525-5810.

**Feb 28-Mar 4 5th Annual Vail Sports Medicine Conference** — Marriott's Mark Resort, Vail, Colorado. Contact Bernard A. Karshmer, MBA, Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. Phone: (303) 629-5333 or (800) 525-5810.

**Feb 28-Mar 4 4th Annual Vail Pathology Conference** — Kiandra Lodge, Vail, Colorado. Contact Bernard A. Karshmer, Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. Phone: (303) 629-5333 or (800) 525-5810.

## March

**1-4 Cancer Invasion and Metastasis** — Shamrock Hilton Hotel, Houston, Texas. Contact the Office of Conferences, Box 18, M.D. Anderson Hospital and Tumor Institute, 6723 Bertner Avenue, Houston Texas 77030. Phone: (713) 792-2222.

**3 Neuropsychiatric Grand Rounds** — Colorado State Hospital, Pueblo, Colorado. 1-3 pm, conference room A. APA approved Category 1 credit. For information contact James H. Scully, MD, Colorado State Hospital, 1600 E. 24th St., Pueblo, Colorado 81003. Phone: (303) 543-1170.

**4-6 2-D and Doppler Echocardiography** — San Antonio, Texas. Sponsored by the University of Texas Health Science Center & The Institute of Cardiovascular Technology. Contact Kim Stroich, 14761 Franklin Ave., Suite A. Tustin, California, 92680. (714) 832-2650. Fee: \$300. 15 hours Category 1 credit.

**5 Gold Medal Award Seminar, Child Abuse: A Psychiatric/Legal Interface** — Presenters are Dr. Brandt Steele (awardee), Dr. James W. Lauer and Judge Dana U. Wakefield. Contact: William W. McCaw, Jr., MD, Mount Airy Psychiatric Center, 4555 E. 12th Ave., Denver, Colorado 80220. Phone: (303) 322-1803.

**6-11 7th Annual Vascular Surgery Symposium** — Aspen, Colorado. Contact the Office of Post graduate Education, the University of Colorado School of Medicine, 4200 E. 9th Ave., Denver, Colorado 80262. Phone: (303) 394-5241.

**7-11 5th Annual Counseling Technique Workshop for the Primary Physician** — The Antlers at Lionshead, Vail, Colorado. Sponsored by Beth Israel Hospital and Geriatric Center, Box 11338, Denver, Colorado 80211. Contact Bernard A. Karshmer, (303) 629-5333 or (800) 525-5810.

**7-11 6th Annual Vail Cancer Treatment Conference** — Lion Square Lodge and Conference Center, Vail, Colorado. Sponsored by Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. Subject: Oncology. Contact Bernard A. Karshmer, (303) 629-5333 or (800) 525-5810.

**7-11 High Risk Infant Care** — Denver, Colorado. Course is presented by the Pediatric Department of the University of Colorado School of Medicine. 40 Category 1 hours are offered. Contact the Office of Postgraduate Medical Education, 4200 E. 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**7-11 Poisoning: a Symposium** — Sheraton Denver Tech Center Hotel, Denver, Colorado. Designed for physicians, pharmacists, nurses and administrators. Highlights include Industrial and Occupational Toxicology, Biologic

Toxicology, Administrative Management of Poison Centers, Legal Liability Issues, Management of Common Poisonings and Controversial Toxicology Issues. Special Seminars include Current Trends in Drug Therapy, Poison Center Management of Common Poisoning and a Toxicokinetics Workshop. Contact Cheryl L. Heckman, Rocky Mountain Poison Center, West 8th Ave., and Cherokee St., Denver, Colorado 80204. Phone: (303) 893-7774.

**8-13 12th Annual Pediatric Postgraduate Program** — Frenchman's Reef, St. Thomas, The Carribean. Tuition: \$185. 18 credit hours in Category 1 from the Accreditation Council on CME. Contact Ann J. Boehme, Continuing Education Coordinator, Office of Continuing Education, Long Island Jewish-Hillside Medical Center, New Hyde Park, New York 11042. Phone: (212) 470-2114.

**9-11 33rd Annual Course for Physicians in Family Practice** — Mount Zion Hospital & Medical Center, San Francisco, California. Tuition \$195. Co-Chairmen: Rene Bine, Jr. MD & James A. Davis, MD. Contact Martin L. Schimerlik, Office of Continuing Medical Education, Mount Zion Hospital & Medical Center, PO Box 7921, San Francisco, California 94120. (415) 567-6600.

**13-18 4th Annual Mammoth Mountain Emergency Medicine Ski Conference** — Mammoth Lakes, California. Fees: \$325 for physicians, \$190 for nurses and \$225 for physicians in training. Credit: 23 each AMA Category 1, California Medical Association, AAFP elective and Board of Registered Nurses contact hours. Contact Daniel L. Abbott, MD, Program Director, Medical Conferences, PO Box 52-B, Newport Beach, California 92662. Phone: (714) 642-7080.

**13-20 4th Annual Clinical Advances in Medicine** — Hyatt Regency Hotel, Acapulco, Mexico. Course includes Radiology for the Non-Radiologist, Update on Gastro Enterology and Medico-Legal Aspects of Medical Care. Credit to be awarded includes 24 hours each of prescribed AAFP/Category 1 ACEP, Category 1 and 2 AMA/PRA. Fee: \$375. Contact Michael Kessler, MD, Physicians Medical Seminars, 970 Clemenstone Drive, Atlanta, Georgia 30342. Phone: (404) 449-1025.

**14-18 4th Annual Clinical Brain Conference** — Kiandra Lodge, Vail, Colorado. Sponsored by Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. 22 hours of instruction. Contact Bernard A. Karshmer. Phone: (303) 629-5333 or (800) 525-5810.

**14-18 5th Annual Vail Pediatrics Conference** — Lion Square Lodge and Conference Center, Vail, Colorado. Sponsored by Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. 22 hours of instruction. Contact Bernard A. Karshmer. Phone: (303) 629-5333 or (800) 525-5810.

**14-18 8th Annual Vail General Surgery Conference** — Marriott's Mark Re-

sort, Vail, Colorado. Contact Bernard A. Karshmer, Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. Phone: (303) 629-5333 or (800) 525-5810.

**17 Head Injuries** — Vail Colorado. Speaker: Steve Samuelson, MD. Credit: 2 hours AMA Category 1 and AAFP prescribed. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 East Colfax Ave., Denver, Colorado 80203.

**18 Nora Eccles Harrison Diabetes and Nutrition Update: Heart Disease, Kidney Disease and Pregnancy.** San Francisco Hilton and Tower, San Francisco, California. Tuition \$25. Credit: 6 hours AMA/CMA Category 1 and for nurses, Dietitians and Pharmacists. Contact the Office of Continuing Medical Education, School of Medicine, TB-150, University of California at Davis, Davis, California 95616. Phone: (916) 752-0328.

**18-20 Ultrasound Update (Abdominal & Obstetrical)** — Los Angeles, California. Sponsored by Memorial Hospital of Long Beach and the Institute for Medical Studies. Contact Kim Stroich, IMS, 14761 Franklin Ave. Suite A, Tustin, CA 92680. (714) 832-2650. Fee: \$300.00. 16 hours of Category 1 credit.

**21-25 8th Annual Vail Internal Medicine Conference** — Marriott's Mark Resort, Vail, Colorado. Contact Bernard A. Karshmer, Beth Israel Hospital and Geriatric Center, PO Box 11338, Denver, Colorado 80211. Phone: (303) 629-5333 or (800) 525-5810. 22 hours of instruction.

**Mar 26-28 & Mar 29-**

**Apr 1 12th Annual Conference(s)** — Vail, Colorado. Conference 1, **Liability Prevention**, March 26-28. 8 hours CME Category 1 and CLE credit. *And/or:* Conference 2, **Infection Control — Third Generation Cephalosporins**, March 29 through April 1. 8 hours CME Category 1 credit. Conferences co-sponsored by United Medical Staff of Boulder & Louisiana Hospital Association. Contact H. R. Mehta, Ph.D, International Hospital Services, 3847 South Olathe Circle, Aurora, Colorado 80013. Phone: (303) 690-2552.

**Mar 28-Apr 1 Vail General Medicine: Current Clinical & Legal Issues** — Lion Square Lodge & Conference Center, Vail, Colorado. Sponsor: Beth Israel Hospital & Geriatric Center, PO Box 11338, Denver, Colorado 80211. 22 hours of instruction. Contact Bernard A. Karshmer, (303) 629-5333 or (800) 525-5810.

**Mar 28-Apr 1 3rd High Country Nuclear Medicine Conference** — The Lodge, Vail, Colorado. Sponsored by Penrose Hospital. Discussions of Monoclonal Antibiotic Image, Positron Generators, SPECT Imaging w/Iodine 123 Compounds/NMR. 20 hours CME Category 1 Credit. Contact Thomas Ravin, MD, Penrose Hospital, 2215 North Cascade Ave., Colorado Springs, CO 80907. Phone: (303) 630-5240.

## Alexis Lubchenco, MD

Alexis Lubchenco, MD, of the Denver Medical Society died November 7, 1982 after a brief illness. He was 69. Dr. Lubchenco, head of the pathology department at Presbyterian Medical Center for 35 years, was active in the American Cancer Society at local and national levels.

He was born on Aug. 23, 1913 in Turkestan, Russia. His parents migrated from Russia during the Russian Revolution in 1917 to settle in South Carolina. They later moved to Sterling, where his mother, Dr. Portia Lubchenco, became one of the most noted physicians in Colorado history. She died in 1978.

Alexis Lubchenco graduated from Clemson University and received his medical degree from the University of Colorado. His postgraduate training was in Long Island College Hospital. During World War II, he served as a major in the 29th General Hospital Corps.

After a brief time in private practice, Dr. Lubchenco became a pathologist at Presbyterian. He also was director of medical education for 17 years at the Presbyterian Medical Center. He entered into semiretirement a year ago.

While active in many areas of public service, his interest centered on the American Cancer Society, serving as a director since 1952 and as a member of the executive committee since 1955. He was delegate director to the national society, president of the Denver Chapter of the Cancer Society and served as regional director of the Colorado Cancer Society.

He was a director and regional commissioner of the College of American Pathologists. His other

memberships included the American Medical Association, Denver Rotary Club, Gyro Club, Denver Country Club and the Montview Boulevard Presbyterian Church.

He married Harriet McBrayer of Columbia, SC, in 1940. Surviving, in addition to his wife, are three sons, Alexis E. Lubchenco of Farmington, NM, Michael W. Lubchenco and R. Mark Lubchenco, both of Denver; a daughter, Ann L. Hines of Denver, two sisters, Portia Whitaker of Aspen and Dr. Lula Lubchenco Josephson of Denver; a brother, Dr. Michael Lubchenco of Denver and seven grandchildren.

## Charles K. Petter, MD

Charles K. "Ken" Petter, 83, of the Larimer County Medical Society, died September 3, 1982 at a Fort Collins nursing home following a lengthy illness.

Dr. Petter was born in Winona, Minn., on Feb. 19, 1899. He married Bernice Dierkhoff in Minneapolis, Minn. on Dec. 30, 1922. They moved to Fort Collins in 1970. Mrs. Petter died Nov. 9, 1971.

He married Roberta Behlmer in Fort Collins on Jan. 2, 1975. She survives.

Dr. Petter was a World War I veteran. He attended Hamlin University and received his bachelors, master's and doctor of medicine degrees from the University of Minnesota.

In 1938, Dr. Petter was invited to Waukegan, Ill. to develop and operate a tuberculosis sanatorium. The Lake County TB Sanatorium opened in September, 1939. He remained medical director of the sanatorium for 31 years.

Additionally, he was an associate in medicine at Northwestern Univer-

sity from 1941 to 1950. In 1956, he became clinical associate in the Department of Medicine at Stritch School of Medicine.

Dr. Petter was president of the Lake County Medical Society in 1944; the Illinois Thoracic Society on 1948; the Illinois Chapter, American College of Chest Physicians in 1950; the Illinois Tuberculosis Association in 1958 and 1959 and the American College of Chest Physicians in 1963 and 1964.

He was a member of the Medical Advisory Committee of the Colorado Lung Association and secretary of the North Central Colorado Lung Association.

Dr. Petter was also an honorary member and past secretary of the Fort Collins Rotary Club, a Paul Harris Fellow medal winner with Rotary and a member of the First United Presbyterian Church and the Fort Collins Coin Club.

Other survivors include a son, Charles K. Petter of Fort Collins; two daughters, Jacqueline McFarland of Littleton and MarLou Schmunk of Laporte; a stepson, Stephen Bakke of Minnesota; 12 grandchildren and six great-grandchildren.

**Robert Boyer, MD**, of Odessa, Texas and formerly of Boulder, Colorado and the Boulder County Medical Society died October 3 in Odessa at the age of 50.

Born January 30, 1933 in Berlin, N.M., he was the son of Ralph H. and Margarie MacAllister Boyer of Colorado Springs. He married Melody E. Mundell.

Dr. Boyer is survived by his son, Christopher Robert and daughter, Elizabeth Ann Boyer, both of whom live in Odessa; two brothers, Dale Boyer of Denver and Ken Boyer of Colorado Springs; and a sister, Carleen Robinson of Colorado Springs.

**Richard Ray Hansen, MD**, of the Larimer County Medical Society, died in a plane crash November 30, 1982. Dr. Hansen and pilot Robert Ocheltree were killed when their Cessna 210 crashed near Sioux Falls, South Dakota.

Dr. Hansen was chief of the medical staff at Poudre Valley Hospital. He was President of the Larimer County Medical Society in 1978. Additionally, he was a member

of the CMS Board of Trustees from 1973-75 and a member of the Colorado Foundation for Medical Care Board of Directors from 1973-1974.

He was born in 1929 in Cleghorn, Iowa. He received his medical degree from the University of Colorado in 1954 and interned at Tripler Army Hospital, Honolulu, from 1954 to 1955. Dr. Hansen served a residency at the University of Colorado Medical School from 1957 to 1960. He married the former Elsie A. Clapp in 1952.

Since 1963, Dr. Hansen was a clinical instructor in obstetrics and gynecology at Colorado General Hospital in Denver. He was a member of the American Medical Association and a fellow of the American College of Obstetrics and Gynecology.

He is survived by his wife; his father, Ross H. Hansen; his children, Richard R., II, Thomas R. Hansen, Patricia C. Hansen and James C. Hansen; and his brother, Robert C. Hansen.

**Lewis H. Hoyle, MD**, of the Pueblo County Medical Society died January 6, 1983. A resident of Pueblo since 1969, Dr. Hoyle was Director of the City and County Health Department from that year until his retirement in 1974. He later served the department as Acting Director from March 1981 to December 1982.

In addition to his membership in the Pueblo County and Colorado Medical Societies, Dr. Hoyle was a charter member of the Pueblo Lions Club, member of the Southern Colorado Consistory, the American Medical Association, the American Public Health Association and was affiliated with the Commissioned Officers' Association of the Public Health Service.

Dr. Hoyle is survived by his wife, Mrs. Katherine S. Hoyle; a son, Dr. Clifford L. Hoyle; a daughter, Carolyn K. Hoyle of Fort Collins; a sister, Alma Scofield of Bloomfield N.M.; two brothers, Arthur D. Hoyle of Albuquerque, N.M. and Clarence Hoyle of La Jara; and two grandchildren, Mark and Michelle Hoyle, both of Pueblo.

**Bradford J. Murphey, MD**, former president of the CMS (1962), died December 14th, 1892. He was

born in Kansas City, Missouri, on May 23, 1891. He received his pre-medical education at Creighton University in Omaha, Nebraska, Omaha University, and the Creighton University School of Pharmacy where he graduated with a Ph.D degree in Pharmacy in 1916. He received his A.B. degree from the University of Nebraska College of Medicine in 1920.

He held a rotating internship at the Kings County Hospital in Brooklyn, New York, and received his post-graduate and residency training in psychiatry at the Elgin State Hospital in Elgin, Illinois, the Chicago State Hospital, the Neurological Institute in New York City, and the Childrens Hospital, the Judge Baker Foundation Psychiatric Clinic, and the New England Home for little Wanderers in Boston, Massachusetts, and also at the Boston Psychopathic Hospital and the Department of Psychiatry of the Harvard Medical School.

In November, 1927, the Colorado Springs philanthropist, Alice Bemis Taylor, asked Dr. Murphey to come to Colorado Springs to organize and direct a free psychiatric clinic for children and their parents. During the ten years he directed the Child Guidance Clinic in Colorado Springs he served, also, as a member of the faculty of Colorado College and as an Associate Clinical Professor of Child Psychiatry at the University of Colorado Medical School in Denver, Colorado.

In 1938 he accepted an invitation to organize and direct a similar child guidance clinic at the Children's Service Center in Wilkes-Barre, Pennsylvania.

During his residency in Pennsylvania he was a member of the Lucerne County and the Pennsylvania State Medical Societies and a lecturer on children's problems at Bucknell University, and also an Associate Clinical Professor of Child Psychiatry at the University of Pennsylvania School of Medicine in Philadelphia.

In 1939 he was awarded an honorary Doctor of Science degree by Colorado College. Shortly thereafter, in 1940, he returned to Colorado to enter the private practice of psychiatry in Denver. He soon became quite active in both medical and civic affairs and continued in his private practice of general psychiatry

until his retirement in 1972.

In 1942 he served as State Chairman of the Colorado White House Conference on Children in a Democracy and also as the Chairman of the Colorado delegation at the National White House Conference on Children in a Democracy in Washington D.C. For a number of years he was an Associate Staff Member of the Health Department of the Denver Public Schools and was also a long-time member of the Medical Commission of the Denver Probate Court.

He was also a staff member of most Denver hospitals and served as Chief of Staff at Mount Airy Hospital and St. Luke's Hospital. He was also an Emeritus Associate Clinical Professor of Psychiatry at the University of Colorado School of Medicine and an honorary member of Alpha Omega Alpha.

He was a member of a group of twenty-one Denver physicians who, in 1953, purchased the privately-owned Mount Airy Sanitarium and initiated its conversion into a modern non-profit, community-oriented psychiatric hospital under the control and direction of the Mount Airy Foundation, with a Board of Directors consisting of both physicians and lay members of the Denver community.

Dr. Murphey was a member and Past-President of the Denver Clinical and Pathological Society and the Denver Medical Society. He was also a life member of the Denver Psychiatric Society, the Colorado Psychiatric Society, and a fifty-year life fellow of the American Psychiatric Association.

He was also a life member of the American College of Physicians, the Central Neuropsychiatric Association, the American Orthopsychiatric Association, and the American Medical Association.

In addition to his wife Margaret Griffin Murphey, he is survived by two sons, Dr. Bradford G. Murphey of San Francisco, California, and Dr. Murray G. Murphey of Bala Cynwyd, Pennsylvania, and by three grandchildren.

# Close your eyes. Now have someone read this to you.

You are blind. A student. Facing four years of college. With about thirty-two textbooks to read. Plus fifty supplemental texts. How are you going to manage?

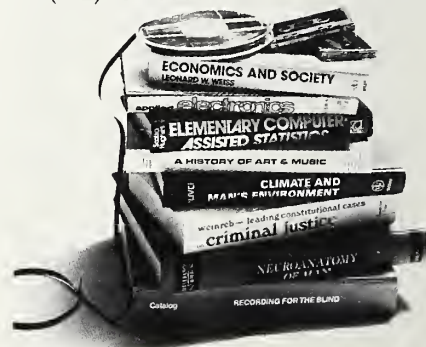

With Recording for the Blind. Since 1951, we've helped over 60,000 blind, perceptually and physically handicapped students get through school. By sending them recordings of the books they need to read. Free.

Recording for the Blind is non-profit, and supported by volunteers and contributions from people like you who can imagine what it's like to be blind.

Your tax-deductible donation will help our students meet their educational goals. We'd all be grateful.

If you want to know more about us, write:

## Rural Physicians & the CME Gap P. 80

# *Being a deaf dancer is really something.*

It looks like any other dance class. The dancers watch their movements in the mirror, giggle, make mistakes, master a position. Yet, Nancy Hlibok and the other students in this class at the Joffrey Ballet School are deaf. Physical response to the vibrations of the music, sign language and an inspiring teacher, Meredith Baylis, make it possible.

The students take pride in their dancing. All are lively and determined. Some would like to become professional dancers.

They probably will.

## Patient Care Forms

What happens if a child becomes ill at school and the parents are not available to give consent for medical treatment? Emergency medical treatment may be denied the child, unless it is a life-or-death situation, according to Joe Turnbull, MD. Dr. Turnbull is director of Emergency Medicine at Beth Israel Hospital.

"Often we will literally spend hours on the phone trying to reach a mother or father to obtain permission to treat a child," Dr. Turnbull said. "Many times when the parent cannot be reached, even after an exhaustive search, then the physician must decide whether to take a chance and treat the child without consent," he added.

In order to help avoid such situations, Dr. Turnbull has written a Parental Consent Form. This form allows a parent or legal guardian to give written consent to treat his or her child in the case of injury or illness in the parent's absence. Dr. Turnbull stated that this form has been approved by a local law firm and by Beth Israel's Legal Committee. More than 450,000 of these consent forms were distributed recently in the Denver area, through school districts and several supermarket chains.

Dr. Turnbull said that the consent forms project is supported and paid for by the Department of Emergency Medicine at Beth Israel Hospital as a public service. Since the hospital does not have a pediatric ward, nor does it admit pediatric patients, "no one can accuse us of using this device to 'corner the market' on pediatric patients, he said. In fact, he noted, the consent form states that the patient should be taken to the nearest hospital.

Anyone interested in obtaining copies of the Parental Consent Form may do so by contacting the Beth Israel Hospital Emergency Department, 1601 Lowell Blvd., Denver, CO 80204 or by phoning the Community Relations Department at (303) 825-2190. Interested physicians may obtain a stack of these forms to keep in their waiting rooms for patients, Dr. Turnbull said.

However, Dr. Turnbull requested that anyone choosing to adapt or

reproduce this form for other publication give credit to him as the author of the pamphlet and to Beth Israel Hospital as sponsor of the Consent Forms project.

## Hospital Board Chairmen Fear Insolvency

Spending on health services consumes approximately 10 percent of the gross national product, making health care the third largest industry in the United States. However, many hospital chairmen are seriously worried about their institutions' ability to survive, according to a new survey of 1,200 hospital governing board chairmen. The survey was conducted by *Trustee* magazine and Arthur Young & Company.

'Despite the fact that more than 90 percent of hospital bills are paid by insurance companies or government programs, chairmen view federal

spending cuts as extremely ominous because hospitals' costs of providing services continue to rise, according to Charles M. Ewell, Jr., Ph.D, Director of Arthur Young's national health care industry group. By some estimates, as many as 1,000 of the roughly 6,000 public and private hospitals in the U.S. could fail in the next several years because of competition from other hospitals and decreased government revenues, Dr. Ewell said.

## Medical Library Directory Available

*The Director of Library Services for Colorado Health Professionals* is now available. The purpose of this handbook is to provide information access for health practitioners in Colorado. Library activities included in the directory are audiovisual materials and services, bibliographic

### AUTHORIZATION FOR TREATMENT OF MINOR

DATE \_\_\_\_\_

I, \_\_\_\_\_ being the parent or legal guardian of

\_\_\_\_\_ give my consent for emergency medical and surgical treatment of this minor in a licensed hospital by a licensed Colorado physician should his/her condition so require it in my absence. I understand that in such a case reasonable attempts would first be made to contact me, time and conditions permitting.

As long as the medical or surgical treatment considered necessary in the situation is in accordance with generally accepted standards of medical practice for the particular type of injury or illness involved, I impose no specific limitations or prohibitions regarding treatment other than those that follow: (If none, so state)

This Authorization is effective for the following time period:

services, consultation, interlibrary loans and information services. The directory was prepared by the Task Force on Health Sciences Information. Members represent the Area Health Education Centers/Learning Resources Coordinators, the Colorado Council of Medical Librarians, the Denver Medical Library and Denison Memorial Library at the University of Colorado Health

Sciences Center. For more information or to obtain copies, call 394-5158 or 839-6670.

## Patient Visit Patterns

*from Medical World News*

Americans visited physicians an average of 2.7 times in 1980, with women visiting physicians more

often than men. A survey by the National Center for Health Statistics found that a third of the visits were to family physicians, 30 per cent to primary care specialists such as internists and pediatricians, 30 per cent to surgeons and the rest to other specialties.

## Maternal/Child Health Training Opportunities

The Graduate School of Public Health, San Diego State University, is now accepting applications from obstetricians, pediatricians and other physicians interested in a career in the field of maternal and child health. Applications are being accepted for August 1983. The program lasts nine months, resulting in a Master of Public Health degree. A special 21-month training program for pediatricians in the field of treatment of handicapped children is also available. Address inquiries to Helen M. Wallace, MD, Professor and Head, Division of Maternal and Child Health, Graduate School of Public Health, San Diego State University, San Diego, California 92182.

## Grievance of the Month

Mrs. G., a 62 year old female who, while visiting her vacation home in the mountains, began to pass blood with severe dysuria and frequency, consulted a local medical clinic in a nearby community. She saw the physician, who examined her briefly, and then ordered blood work, urine tests, an EKG and a chest x-ray. She was given an antibiotic injection and told to return the next day for another exam and to make sure that her infection was responding to the medication.

She returned the next day, somewhat better and again her urine was cultured, blood was drawn and she was given a prescription to take by mouth. She was informed to return in a week. She was given the bill — \$375.00 — and couldn't believe it! The bill was itemized to the finest detail and she paid it reluctantly with a credit card.

In a week she felt it would be cheaper to drive the two hundred miles to her home in eastern Colorado and see her family physician. After returning home, she showed the itemized bill to her physician, who was also astonished and suggested that she consult the Grievance Committee of the state medical society.

Mrs. G. wrote a letter to the Colorado Medical Society Grievance Committee describing her incident in the mountains and sent a copy of the itemized statement. Since the physician who was treating Mrs. G. resides in a county in which there is no grievance committee on the local level, the matter was handled at the state level.

After reviewing the bill and

Mrs. G's letter, it was the feeling of the Grievance Committee that Mrs. G. probably had hemorrhagic cystitis and that a chemistry panel, an EKG, a chest x-ray, two urinalyses and two cultures along with two CBS's and perenteral antibiotics was probably over-kill. Her direct contact with the physician had been less than fifteen minutes combined for the two visits.

The committee sent a letter to the respondent physician stating that, although it was not in the realm of the Grievance Committee to set fees or to dictate how medicine should be practiced, the committee felt that there had been some overutilization in this case and an explanation would be appreciated. The physician promptly responded, stating that he was under the impression, from his nurse, that Mrs. G. wanted a general check-up also, and that was the reason for the chest, EKG, etc. He felt a repeat culture, urinalysis, and CBC were indicated the next day to make sure that his therapy was effective.

This message was related to Mrs. G. who stated that she had not requested a general check up, but as long as there was a question of some misunderstanding, she would accept his explanation and drop the complaint.

The committee then forwarded a note to the respondent physician stating that the grievance had been dropped, but that in the future the committee felt he should discuss with the patient the reasons for the tests and particularly the costs involved to alleviate any misunderstanding.

## ROCKY MOUNTAIN MEDICAL JOURNAL

### CENTENNIAL YEAR BOOK

is still available, providing 100 years of history of the University of Colorado School of Medicine and the continuous involvement/support of the Colorado Medical Society.

This Year-Book of the Centennial is also the last publication of the Rocky Mountain Medical Journal, so it should be a "must" for your personal library.

To order: send check or money-order in the amount of \$8.40 to Colorado Medical Society, Bldg. #2, Denver, 80224. Last publication. First come, first served!

## Patient Alert

To All Physicians in Colorado:  
RE: Felix Longoria BD: 11/20/50

Dear Colleagues:

This letter is to inform you about the above mentioned patient, who has a severe drug abuse problem. Mr. Longoria is a carpet layer by profession who apparently suffered a back injury several years ago and states that he has been disabled ever since. He has had multiple x-rays taken in the San Luis Valley and in

Denver and has seen practically every doctor within a 300 mile radius. He is constantly shopping for narcotics, particularly Percodan, but will accept Tylenol with codeine when the Percodan is withheld. He also requests Valium or similar drugs to control his nerves.

Please be advised that this patient is quite professional in his knowledge of his symptoms and treatments but is quite passive-aggressive and will not follow up on any treatment recommended. He has failed to keep many appointments to see Dr. Charles Bennett at

the Mental Health Center. The purpose of this letter is to inform you of this patient's drug addiction problem in the likelihood that he sees any of the Valley physicians.

Respectfully,  
Ronald Gooder, MD

## The Young Physician and Organized Medicine

"In the final analysis, if organized medicine is to grow and prosper, each member of organized medicine must work harder to recruit young physicians and to keep them involved and participating." This is the concluding statement from the Council on Long Range Planning and Development of the AMA in a report released at the AMA Interim Meeting in December, 1982. The report reflects on the increasing number of young physicians and the need to get them involved early in organized medicine. Certainly patterns set early in a physician's career often reflect in his attitudes and participation later.

How then can the young physician be encouraged to participate in organized medicine? First of all, this appears to me not to be a specific problem of the AMA but one which actually needs to be addressed at the component society level. Improving communications with younger physicians is the obvious first step in getting them interested in the medical society. We must communicate the goals and problems of organized medicine to all physicians. We must emphasize the absolute need of a strong medical society at all levels to look after the concerns of all physicians and their patients.

We are slowly seeing a change in the physician profile in this country. The private practice entrepreneur is becoming less evident. More and more physicians are opting for salaried positions with industry or government or large health care provider groups. These groups are enticing to the younger physician as they allow him or her to start medical practice with minimal financial outlay or risk. Organized medicine must make a more conscious effort to communicate with and relate to the needs of these groups. A physician in the protected environment of a large health group may be less concerned about the future directions of medicine because he feels that the group will look after his interests. We need to show all physicians they cannot be passive in this environment and must continue to work for what they

## president's letter

Merlin G. Otteman, MD  
President, Colorado Medical Society

believe is best for medicine in Colorado.

An interesting paradox is occurring in medicine today. The average age of our patients is slowly rising, reflecting the increased longevity of the population today. On the other hand the average age of physicians is declining because of the large numbers of students who graduated from medical school in the '70's. It is this group of young physicians that will mold the future of medicine. How can organized medicine reach this group? Obviously this needs to start in medical school and residen-

cies. Increased communication with students about the problems of organized medicine seems necessary. Ideally a formal course in the medical school emphasizing the goals and concerns of the medical society would alert the students to their future.

Those of us who deal with students and residents need to discuss with them and with each other the changes in our profession. Dean Schwarz in his critical reflection published in the January 1983 issue of *Colorado Medicine* pointed

*(Continued on next page.)*

## Emergency! First Aid

**Condition:** Poor legislative response to physician and private practice needs.

**Symptoms:** Irregular pulse of federal and state lawmakers when confronted with medical and health care issues that directly impact your practice.

**First Aid Remedy:** Rally 'round the COMPAC flag... get involved by obtaining your membership as a sustainer, now, in the Colorado Medical Political Action Committee.

CMS lobbyists reviewed and tracked 72 bills during the 1982 legislative session, lobbied key bills and amendments, aided in placing of physicians in key state committee and board positions.

Sharon Ritzman  
President, Colorado Medical Society Auxiliary

## Why It Is Important to Join the Auxiliary

Having completed 10 months in office as Colorado Medical Society Auxiliary President, I would like to share with you some thoughts I have midway through my term. I feel more strongly than ever that the auxiliary is an important and necessary organization, especially in light of today's perception of the medical profession by the public. The picture of medicine presented to the public should include the physician dedicated to delivering quality health care as well as the supportive spouse visibly involved in community work that reflects favorably on the medical family. The auxiliary is one of the perfect means for the spouse — man or woman — to accomplish this. How to get more physicians' spouses to recognize this and/or become involved seems to be our biggest challenge. As I have said before, the physician's strongest ally is the spouse, and the medical society's strongest ally is the auxiliary. The auxiliary is an important and visible force behind medicine today — remember that nationwide we are 81,000 strong and powerful.

In Colorado we currently have approximately 1,300 auxiliary members out of a 4,800 member state medical society.

How do we convince more physicians' spouses to become involved in the auxiliary's worthwhile and important projects? The decision to join or not to join is rarely a matter of dues but rather a matter of priority. We have to convince potential members that joining the auxiliary should be high on their list of priorities — even if they can't be actively involved. The results of my survey of physicians in last July's issue of *Colorado Medicine* show that 40% of the physicians responding think that auxiliary dues are too low and 60% think they are just right; this makes it evident to me that money is not the problem.

One physician responding to the survey said that his wife did not belong because she "doesn't consider herself her husband's auxiliary." The dictionary defines auxiliary as: "one who aids or helps; assistant; associate." I would hate to think that I cannot be that to my husband and at the same time have my own identity. If I belong to the PTA, it is because I am my children's mother, yet it doesn't make me an appendage of them.

The survey results also show that 50% of the physicians responding want the auxiliary to promote better public relations for physicians. They want us to speak out on health care issues and to get involved in our communities and provide community health care education. They want the auxiliary to be actively involved in legislative activities. I feel that we are already doing an excellent job in

(Continued from previous page.)

out many of the changes occurring in our profession. Many of these attitudes develop in medical school and organized medicine needs to become more involved at that level to make a difference.

One of the benefits to members of the CMS is our malpractice insurance program. At the present time due to the increasing competitive climate in Colorado in the insurance industry we are losing some of the resident physicians membership. The COPIC Trust Board recognizes this problem and is designing a program that will be competitive with the initially less expensive claims-made programs now available. Hopefully this will be a stimulus to get the younger physician into organized medicine participation.

All members of the Colorado Medical Society need to personally recruit young physicians into the society. We should be making personal contacts, bringing them to component meetings as guests and discussing the programs of CMS. Only through these efforts can the medical society remain as a strong force in Colorado medicine.

all of these areas; however, with more members we could do even more.

Vice-President and Membership Chairman Sharon Cunningham, has worked extremely hard to increase membership this year. Final figures are not yet compiled, but it doesn't appear that we will reach our goal of a 25% increase. I again ask each of you to get one physician's spouse who does not belong to join. Let's show Sharon that her work was not in vain.

I would like to close by sharing with you the volunteer's creed of AMA Auxiliary President, Betty Payne. "I am only one, but still I am one; I cannot do everything but still I can do something; and because I cannot do everything, I will not refuse to do the something I can do." For some, that "something" may be simply paying dues and thus enabling others to do their "something" in carrying out the important volunteer activities of the auxiliary. Please join us in this worthwhile effort, and thank you all for your support.

# Take its Measure

## In Arthritis **RUFEN**<sup>®</sup> (ibuprofen)

**measures up...  
at a reasonable cost!**

### **Far-Reaching Effectiveness for Arthritis Patients**

Rufen<sup>®</sup> offers your patient effective relief, both as first therapy or after other potent medications fail. In comparable trials with indomethacin<sup>1,2</sup> sulindac,<sup>3,4</sup> and other antiarthritic agents,<sup>5-7</sup> findings consistently demonstrate high improvement with ibuprofen (Rufen) by such objective and subjective measures as reduction of swelling, improved grip strength,<sup>1</sup> reduced morning stiffness,<sup>1</sup> better ambulation,<sup>1</sup> improved range of motion,<sup>4</sup> reduction and relief of pain.<sup>1-5</sup>

### **Low Score in Side-Effect Risk**

Through more than 13 years of worldwide use, ibuprofen continues to demonstrate exceptional gastrointestinal tolerance vis-a-vis aspirin and other antiarthritic agents. In a recent series of double-blind trials of ibuprofen, naproxen and other NSAID's, only placebo was shown to produce less G.I. lesions than ibuprofen on gastroscopic examination.<sup>5</sup>

**Boots Pharmaceuticals, Inc.**  
Shreveport, LA 71106  
**Pioneers in medicine for the family**

See next page for brief summary of prescribing information.

# Measure RUFEN<sup>®</sup> (ibuprofen) for GI Tolerance Even in arthritic patients with a history of GI disease

## And Rufen<sup>®</sup> Measures Up Best

Over a five-year period, ibuprofen was administered to 64 patients with known peptic ulceration and 42 with known gastric intolerance to other antiarthritis drugs.

Twenty-six patients remained in treatment, 23 left treatment following remission, and 35 dropped out for reasons unrelated to side effects. In this specially selected group of GI-intolerant patients, only 13 (12.3%) discontinued ibuprofen because of GI intolerance.

"Any drug used in the control of the symptoms of the chronic arthritis must be tolerated for long periods without undue gastric discomfort...From this study it appears that ibuprofen is eminently suitable."<sup>8</sup>

Peptic ulceration and GI bleeding, sometimes severe, have been reported. Rufen<sup>®</sup> should be given under close supervision to patients with a history of upper GI tract disease.

### RUFEN<sup>®</sup> (ibuprofen) Tablets

**INDICATIONS AND USAGE:** Treatment of signs and symptoms of rheumatoid arthritis and osteoarthritis during acute flares and in the long-term management of these diseases. Safety and effectiveness have not been established for Functional Class IV rheumatoid arthritis.

**Relief of mild to moderate pain. Treatment of primary dysmenorrhea.**

**CONTRAINDICATIONS:** Patients hypersensitive to ibuprofen, or with the syndrome of nasal polyps, angio-edema and bronchospastic reactivity to aspirin or other nonsteroidal anti-inflammatory drugs (see WARNINGS).

**WARNINGS:** Anaphylactoid reactions have occurred in patients hypersensitive to aspirin (see CONTRAINDICATIONS). Peptic ulceration and gastrointestinal bleeding, sometimes severe, have been reported. Peptic ulceration, perforation, or gastrointestinal bleeding can end fatally; however, an association has not been established. Rufen should be given under close supervision to patients with a history of upper gastrointestinal tract disease, and only after consulting the ADVERSE REACTIONS.

In patients with active peptic ulcer and active rheumatoid arthritis, nonulcerogenic drugs, such as gold, should be attempted. If Rufen must be given, the patient should be under close supervision for signs of ulcer perforation or gastrointestinal bleeding.

**PRECAUTIONS:** Blurred and/or diminished vision, scotomata, and/or changes in color vision have been reported. If developed, discontinue Rufen and administer an ophthalmologic examination.

Fluid retention and edema have been associated with Rufen; caution should be used in patients with a history of cardiac decompensation.

Rufen can inhibit platelet aggregation and prolong bleeding time. Use with caution in patients with intrinsic coagulation defects and those taking anticoagulants.

Patients should report signs or symptoms of gastrointestinal ulceration or bleeding, blurred vision or other eye symptoms, skin rash, weight gain or edema.

To avoid exacerbation of disease or adrenal insufficiency, patients on prolonged corticosteroid therapy, this therapy should be tapered slowly when adding Rufen.

**DRUG INTERACTION:** Coumarin-type anticoagulants. The physician should be cautious when administering Rufen to patients on anticoagulants.

**Aspirin.** Concomitant use may decrease Rufen blood levels.

**PREGNANCY AND NURSING MOTHERS:** Rufen should not be taken during pregnancy nor by nursing mothers.

**ADVERSE REACTIONS:** Incidence greater than 1%. **Gastrointestinal:** The most frequent adverse reaction is gastrointestinal (4 to 16%). Includes nausea\*, epigastric pain\*, heartburn\*, diarrhea, abdominal distress, nausea and vomiting, indigestion, constipation, abdominal cramps or pain, fullness of GI tract (bloating and flatulence). **Central Nervous System:** dizziness\*, headache, nervousness. **Dermatologic:** rash\* (including maculopapular type), pruritus. **Special Senses:** tinnitus. **Metabolic:** decreased appetite, edema, fluid retention. Fluid retention generally responds promptly to drug discontinuation (see PRECAUTIONS).

\*Incidence 3% to 9%.

**Incidence less than 1 in 100. Gastrointestinal:** gastric or duodenal ulcer with bleeding and/or perforation, hemorrhage, melena. **Central Nervous System:** depression, insomnia, confusion, emotional lability, somnolence, aseptic meningitis with fever and coma. **Dermatologic:** vesiculobullous eruptions, urticaria, erythema multiforme, Stevens-Johnson syndrome and alopecia. **Special Senses:** hearing loss, amblyopia (blurred and/or diminished vision, scotomata and/or changes in color vision) (see PRECAUTIONS). **Hematologic:** neutropenia, agranulocytosis, aplastic anemia, hemolytic anemia (sometimes Coombs positive), thrombocytopenia with or without purpura eosinophilia, decreases in hemoglobin and hematocrit. **Cardiovascular:** congestive heart failure in patients with marginal cardiac function, elevated blood pressure. **Allergic:** syndrome of abdominal pain, fever, chills, nausea and vomiting, anaphylaxis, bronchospasms (see CONTRAINDICATIONS). **Renal:** acute renal failure in patients with preexisting significantly impaired renal function, decreased creatinine clearance, polyuria, azotemia, cystitis, hematuria. **Miscellaneous:** dry eyes and mouth, gingival ulcers, rhinitis.

**Causal relationship unknown. Gastrointestinal:** pancreatitis. **Central Nervous System:** paresthesias, hallucinations, dream abnormalities, pseudotumor cerebri. **Dermatologic:** toxic epidermal necrolysis, photo-allergic skin reactions. **Special Senses:** conjunctivitis, diplopia, optic neuritis. **Hematologic:** bleeding episodes. **Allergic:** serum sickness, lupus erythematosus syndrome, Henoch-Schönlein vasculitis. **Endocrine:** gynecomastia, hypoglycemia. **Cardiovascular:** arrhythmias (sinus tachycardia, bradycardia, and palpitations). **Renal:** renal papillary necrosis.

**OVERDOSAGE:** Acute overdosage, the stomach should be emptied. Rufen is acidic and excreted in the urine, alkaline diuresis may benefit.

**DOSEAGE AND ADMINISTRATION:** Rheumatoid arthritis and osteoarthritis, including flareups of chronic disease: Suggested dosage 400 mg t.i.d. or q.i.d.

**Dysmenorrhea:** 400 mg every 4 hours as necessary.

Mild to moderate pain: 400 mg every 4 to 6 hours as necessary for the relief of pain. Do not exceed 2,400 mg per day.

**CAUTION:** Federal law prohibits dispensing without prescription.

## Cost Containment — What Does It Mean?

Containment defined by Webster indicates "to hold." Cost containment then simply means to hold the medical costs, right? Wrong! Cost containment as applied to the medical field is infinitely more complex. Its implications and influence on the practice of medicine become more significant and profound as time passes.

It began in the late '40's, the romance of the American people with their medical care. During the '50's, '60's and '70s, our government and business responded to the dance by pouring money into new programs and benefits — Medicaid, Medicare, First Dollar Insurance Coverage and Health Benefits as the prize of collective bargaining. Medicine met this overture with rapid advances in technology — intensive care units, computer diagnosis, hemodialysis and coronary by-passes; with new facilities — hospitals, medical schools, minor emergency centers and nursing homes; with new medical and technical specialists — oncologists, critical care physicians, respiratory therapists and flight nurses. The product of this romance has been the finest medical care system in the world to which people of our country, from all economic levels, have access.

As with most endeavors, a final price must be paid. This is the essence of the present cry for cost containment magnified by the recession in our country. National, state and local governments, business and the public are looking at the cost of their medical bills and find that they cannot afford the system that they have created. Governments are trying to balance their budgets. Industry finds that medical care benefits frequently equal their raw material costs. The public sees their insurance premiums going beyond their ability to pay.

This atmosphere promotes changes and they will have significant impact on many aspects of medicine. An evolutionary process is rapidly taking place in the financing of medical care that will affect all health care providers, business and the public. The most significant of

John A. Whitesel, MD  
CMS President-elect

these is the method with which hospitals will be reimbursed for Medicare patients. They will be paid by the case and not by the day. They will also have their prices capped by diagnostic groups (D.R.C.) for primary as well as ancillary services. Private insurance will very likely follow into this mode.

Another change is the loss of diagnostic and treatment services moving out of the hospitals to physicians' offices and to private centers. This reduction of revenue will cause hospitals to search for new patient sources by moving into other service areas (hospices, nursing homes, etc.) and new support areas with satellite clinics. They will be interested in aligning themselves with H.M.O.'s and P.P.O.'s. They may consolidate or eliminate services, concentrating on those that they do best and which are profitable for them. The number of beds may be reduced. Physicians may be hired on salary or told they must join a hospital P.P.O. to retain hospital privileges. Less experienced and, therefore, less expensive personnel will replace those presently staffing hospitals. Alignments of hospitals with other hospitals or sales of hospitals to other corporations or hospital chains may occur.

Business and labor organizations will begin to shop for the best return on their health dollars within a quality range. They will want to see data on individual hospital and physician performance relating to cost effectiveness. They will emphasize peer review and data collection. Business and labor organizations may become involved in hospital and medical decisions regarding capital expenditures.

Physicians will find that grouping

together, whether in small groups, P.P.O.'s or H.M.O.'s, will be advantageous for bargaining with business and labor for patient groups they represent, dealing with hospitals and government agencies. The beginning physician will find that starting a solo practice, especially in a metropolitan area, will be very difficult. Methods of practice may have to change, depending upon standards and demands from business-labor, hospitals, government and physicians' own peers. Physicians will have to monitor hospital budgets and expenditures as these areas will influence the funds remaining for physician services and future amounts payors are willing to allocate. Hospital staffs may need to form an independent group, hire their own legal counsel and be more familiar with hospital bylaws and their implications as new stresses and strains develop with former relationships.

Insurance companies will have to revise policies to cover more procedures in doctors' offices, free-standing diagnostic and surgical centers. They will have to offer deductible policies and "shopping basket" policies, i.e. allowing subscribers to select the type and amount of coverage. Many of these companies will strive to be the accepted peer review organization and data agency. They may negotiate fees and form their own P.P.O.'s.

Patients will find that with reduction of funds, they may have to accept less personal attention, less freedom of choice, e.g. hospital or physician, and less convenience. They may have to shop for the most economic care from hospitals and physicians. They will have to assume  
(Continued on next page.)

The legislature is beginning the third month of what appears to be a six-month session. The early calendar schedules the end of the 1983 session as May 14th with the final date for consideration, of gubernatorial vetoes as June 28th. We have a long way to go.

Perhaps a more important date is March 5th, the day on which all bills must be introduced. A very few bills are granted "late bill status" by Senate and House leadership, but basically we should know by that date what the level of frustration will be throughout the spring. Other-than-physician health care providers have introduced an array of legislation ranging from the sane to the insane. On the one hand chiropractors are asking for a tightening of their reciprocity laws, thus allowing them to look more carefully at practitioners moving into Colorado. On the other hand (or foot), podiatrists

are asking for mandated surgical privileges in hospitals, and optometrists are once again asking for diagnostic use of drugs.

Attempts at solving the medically indigent, the living will, the abused adult, the child seat restraint problems are all being addressed in bills that have been introduced. But the dark cloud that hangs over everything is the fiscal picture. There are no dollars to fund new programs, and current programs are being drastically cut. Contracted programs, such as the Colorado Medical Society's fine jail health program, are being cut if necessary; and renewed funding is questionable.

Remember the second annual trip to Washington, D.C. from April 20-23. It is a worthwhile and fun experience and a chance to make a difference for medicine with your congressional delegation!

Left to right, James H. Gentry, MD; Harrison F. Hayes, MD; Theodore E. Wills, MD, President, Colorado Ophthalmological Society; James R. Cerasoli, MD, Chairman, COS Committee on Legislation, pictured at recent Colorado Senate HEWI meeting. The Senate committee voted 4-3 against SB 82, concerning the use of pharmaceutical agents by optometrists. The House Business Affairs and Labor Committee voted 8-2 in favor of a similar bill on February 15.

(Continued from previous page.)  
more and more of their medical service costs.

When the economic "nuts and bolts" are tightened, the "fat" is trimmed from the health care delivery system and expenses continue due to labor costs and growing technology, the subject of "allocation of resources" confronts us all. Will restriction or medical care rationing arise to keep expenditures below 10% of the Gross National Product? Who will be denied services and who will make the decisions, if they are allowed to be made? In the rush for cost containment, we as physicians must not allow the sacrifice of technical advances or quality, nor the loss of medical services to the elderly, the poor or high-risk patients. We must be self-appointed guardians in these areas and assist in the construction of an equitable program for all.

The formative period of this era is still upon us, but will soon pass. Become informed regarding the issues and make your decisions and convictions known to government, business and the public through your medical society.

Cost containment ushers us into a new era of medicine. This era is one that brings with it competition, limitations of resources, evaluation and review. Influences and implications concerning medicine are legion. Every practicing physician will be affected to a greater or lesser degree. Therefore, it becomes imperative for all physicians to become familiar with the emerging problems and then work together for their solution.

A spirit of cooperation among all health care providers will be necessary to develop a system answering the present-day demands for economy and change. This system should be one that retains quality, fosters technical advances and effectively serves all our citizens. This will be a challenging task for organized medicine and requires your participation for its success.

## Board of Directors

The Colorado Medical Society Political Action Committee (COMPAC) met on Monday, January 10th at 6:30 PM. Board members present were Drs. John Glode, Thomas Larkin, Frederick Lewis and Chairman H. R. Safford; Kathleen Safford and Carol Sides. Excused: Drs. Arnold Loken and Leroy Sides.

### Meeting highlights:

- the treasurer's report showed a balance of \$10,195.55 in the general fund and \$979.83 in the educational fund;
- 1983 COMPAC members total 152 and include 58 new members, 103 sustaining, 4 family memberships, 41 singles, 4 auxiliaries and 3 contributions;
- a decision was made to pay for brochures, postage, and miscellaneous items from the educational fund account;
- staff was instructed to develop job descriptions for the COMPAC district chairman and component society positions;
- consideration was given to the recommendations submitted to the COMPAC board by the CMS Board

of Directors and this report is in response to the recommendations that the membership be advised of the PAC meetings and that the attendance at the meetings be reported to the membership; the board believes that implementation of the district chairman and component society program will increase membership input into the candidate selection process; consideration will be given at the next meeting concerning entering statewide non-congressional election races;

- a COMPAC film presentation is now ready for viewing by compo-

# compac report

nent and specialty societies and several societies have currently scheduled this presentation for their meetings;

The 1983 COMPAC Board of Directors will meet in 1983 on the following dates: Monday, March 14th, June 13th and September 13th at 6:30 PM. The annual board meeting will be held during the CMS Annual Session in October.

## CMS Annual Trip to Washington, D.C.

*April 20-23, 1983*

"Beautifully organized, rare political educational experience" *Nancy Nelson, MD.* . . "Truly one of the most delightful trips I've ever been on, with the most congenial people I've ever met" *Telford Davis, MD.* . . "Format should be varied from year to year to maintain interest of 'old timers' and avoid boredom. Spouses are crucial to success of this effort" *Bill Reimers, MD.* . . "A rating of 10 for commitment and organization of leaders" *Ward Curtis, MD.* . . "Definitely repeat annually" *Ed Tennant, MD.* . . "Great experience" *Merlin Otteman, MD*

## Patient Medication Instruction Forms

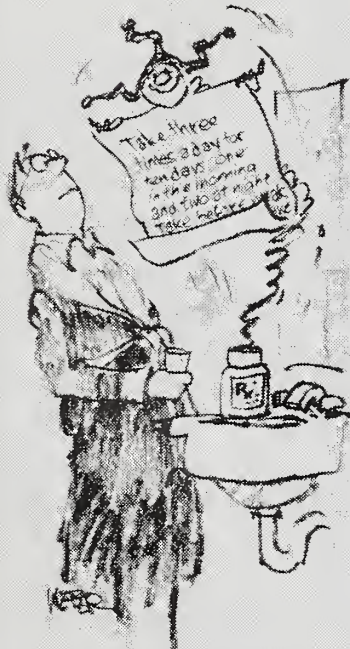

*From the American Medical Association*

### Why Patient Medication Instructions?

Each year, Americans have 750 million prescriptions filled to treat every ailment from aches and pains to a complex cardiac condition. But about 40 percent of these prescriptions may not help their users *because the medications aren't taken correctly.*

A prescription shouldn't  
be a surprise package.

The Patient Medication  
Instruction Program.  
Because your doctor  
wants you to know.

What goes wrong? Sometimes patients are confused by the instructions they receive. They may not be aware that allergies, other medications, or even food can affect the way certain drugs work. They may stop using the drug as soon as they feel better, or because it doesn't produce immediate results — instead of completing the entire program of medication.

Your doctor writes a prescription because he or she wants you to take a medication especially designed for your illness and medical history. Taking a prescription incorrectly can result in adverse drug reactions, prolonged illness and higher health care costs.

That's why the American Medical Association has developed Patient Medication Instructions (PMIs) for many commonly prescribed drugs. Your doctor can give you a PMI with your prescription.

### The Information You Need

PMIs are easy-to-read, easy-to-understand forms that provide you with important information about your prescription, including:

- Your doctor's instructions
- What the drug is for
- Proper use of the medication
- What to expect when you take it
- Possible drug and food interactions

Because you can take your PMI home, you can refer to it whenever you have questions about your medication.

### Ask your doctor for PMIs.

Patient Medication Instruction Forms are currently available from your doctor for these drugs or drug classes:

Belladonna alkaloids and barbiturates  
Benzodiazepines  
Beta-blockers  
Cephalosporins-oral  
Cimetidine  
Corticosteroids-oral  
Coumarin-type anticoagulants  
Digitalis medicines  
Erythromycin  
Furosemide  
Insulin  
Methyldopa  
Nitroglycerin sublingual tablets  
Nonsteroidal anti-inflammatory drugs  
Oral antidiabetes medicines  
Penicillins-oral  
Phenytoin  
Sulfonamides  
Tetracyclines  
Thiazide diuretics

*Attention physicians: Patient Medication Instruction Forms are available from the American Medical Association, 535 N. Dearborn St., Chicago, Illinois, 60610, or call CMS Department of Communications for more information on how to obtain these forms.*

Ed: During recent months, the question has repeatedly risen concerning advisability of physician ownership of medical office space. The reasons are obvious: tax benefits; facility control by the physician P.C.; future expansion or sub-leasing; capitation of long-term monthly expense of doing business, and many more. Many members of CMS have gone into building and property development, while others must remain in the marketplace for lease space. The question arises as to how far a physician should go in developing his own practice office space.

Recently, a new approach has developed regarding physician equity: equity leasing. In our efforts to report just what equity leasing means, **Colorado Medicine** was put in contact with William "Bill" Bergman, the 33-year-old Vice President of a Denver-based development firm, Counselors in Real Estate. Bergman is credited with pioneering "equity leasing." Bergman, the son of the Iowa attorney who founded the Keystone ski resort, and a principal in a number of projects in the Denver area as well as Colorado mountains, explains his physician-oriented program of "equity leasing."

**Publication of this article, its contents or its implications should not, in any way, be construed as an endorsement, implied or otherwise, by Colorado Medical Society, its officers, staff or membership, of the subject of this article, or of those commercial entities or services mentioned herein or of the persons quoted.**

Bill Bergman recalls that he "ran into a group of lawyers planning a building for their own use; a building where tenants who leased complete floors could acquire equity." Already familiar with the concept of the owner-occupied building, but mildly offended by the exclusivity of restricting ownership opportunity to only full floor users — the big law firms — Bergman had an idea. Why not, he reasoned, buy or renovate buildings so that all, rather than some, of the occupants could share ownership? He researched the market, consulted with his senior associate, Jack Wogan, Counselors in Real Estate (CRE) president, and

came up with a model clientele: the practitioners of medical sciences. Why physicians? "A doctor," Bergman explained, "is a person who wants his own office and, as the years pass and earnings eventually rise, his own building. But the financial markets have changed so much that all commercial properties are very difficult to finance. I strongly feel that I should not practice medicine and that doctors should not develop buildings. They would do better going to a specialist — just as I do for medical care. A professional developer is an expert in his field and must stay attuned to financial markets, construction techniques and the numerous other facets of his business in order to remain successful."

It is in a variety of projects that Bergman offers equity leasing — the opportunity for doctors to benefit from more than just a rent deduction. For, unlike the tenant whose only tax advantage is the deductibility of office rent, the equity leasee enjoys not only the rent reduction, but shares in the cash flow benefits and appreciation as well.

The concept of equity leasing is familiar to all medical practitioners who have engaged in what is becoming America's most common joint venture transaction, the limited partnership. With the developer (such as CRE) as the general partner, three advantages accrue to the partners: "The partnership can finance out at 100%, the doctors are in an office at only slightly above market, and the only general partner, the developer, is the one with general liability. In the nature of limited partnerships, everyone then shares in the ownership benefits."

## Equity Leasing: What Is It?

Bill Pierson  
Executive Director Communications, Colorado Medical Society

Bergman notes some differences between equity leasing and other limited partnerships: "In a standard limited partnership, normal lease rates do not cover all the costs, so that the partners must ante up-front cash to bridge the cost differential. By contrast, in equity leasing you pay as you go; your equity is made up of the difference between the determined and the market lease rate. Since you're paying monthly, everybody avoids the up-front cash requirement, which is usually quite significant," says Bergman.

It is this difference — the ability of a doctor to pay a slightly higher lease rate than the market dictates, in anticipation of cash flow and tax benefits — which makes equity leasing particularly attractive to lenders as well as to the partners. It is also possible to presell a building, resulting in ultimate cost savings through abbreviated loan time and rates to the developer and the doctor both.

Inside the buildings, Bergman says, "there is much greater flexibility than is usual. We are able to put the doctor in the position of designing his own office space — 2,000 square feet, for instance — pretty much as his practice dictates. A physician is a more satisfied equitor than tenant. He knows what he wants, and when the interior is designed to his needs rather than being just a space to rent, he gets what he wants."

Bergman regards equity leasing as the medical office "form of the future," both because it "works on new construction, and because it is equally attractive for older structures which qualify the partners for tax credits extended for the rehabilitation of older buildings."

# Colorado Medicaid Primary Care Physician Program

*by David L. Hlavac, Director, CMS Division of  
Medical Economics and Professional Relations*

Over the past several months, the Department of Social Services, working in close conjunction with an advisory committee of physician representatives, has been developing a "case management" system for the Colorado Medicaid program. The Primary Care Physician Program, or PCPP, provides a system whereby Medicaid recipients choose a single physician from among those participating in the program to serve as the coordinator, or "gatekeeper" of their utilization of the health care system.

The concept of a "case manager"

is not new to the health delivery system and has been in operation, primarily in IPA/HMO type systems, for some time. Its application to the Medicaid program, however, is quite new.

Prior to the Omnibus Reconciliation Act of 1981, such arrangements were precluded by federal regulations. The relative recency with which "case management" has been implemented into state Medicaid programs points to an absence of accurate evaluative data concerning the effectiveness of this approach to improving access and reducing costs. Despite this, a number of states are proceeding with the introduction of primary care physician networks into their Medicaid programs.

In Colorado, the Medicaid program has been experiencing tremendous financial pressures. In addition, because of traditionally low reimbursement and significant administrative burdens, the number of physicians willing to provide services to Medicaid patients has declined significantly. The Primary Care Physician Program is seen as one measure which holds out the potential for redressing some of the problems with the current program.

The Physicians Advisory Council, appointed by Governor Lamm from recommendations made by the Colorado Medical Society, Colorado Osteopathic Society and state specialty societies, began meeting with the Department of Social Services in November of last year. Meeting on a bi-weekly schedule, the Advisory Council and DSS have developed an initial set of program protocols and regulations. Not all issues have been settled as yet, and

the guidelines will be modified and refined as the DSS and Advisory Council continue their joint efforts to develop the program.

A number of the basic issues have been settled, however, and are reflected in the draft set of regulations. The proposed regulations were scheduled for initial review by the State Board of Social Services on February 4. The regulations are due for subsequent review on March 4 and April 1 before they become the official operating guidelines for the program. In the interim, the Physician Advisory Council will continue to work with the Department of Social Services to resolve any differences.

The first five counties chosen for implementation of the Primary Care Physician Program are on the western slope; Delta, Montrose, Ouray, San Miguel and Mesa. The Department of Social Services has already held preliminary meetings with the physician communities in those counties to explain the program and respond to any expressed concerns. Preliminary indications point to a favorable response from the physicians and general support for the concept.

One of the key concerns has been the issue of reimbursement for services. Upon recommendations of the Physician Advisory Council, the Department of Social Services is proposing an incentive pool of \$2.4 million to be added to the physician services line item of the fiscal 1983-84 budget. If accepted by the legislature, the incentive will have the effect of increasing physician reimbursement immediately at the start of the 1983 fiscal year by 12.5%. As an additional incentive, physicians stand to receive further reimbursement increases if anticipated savings from decreases in inpatient and outpatient hospital utilization are realized.

As development of the Primary Care Physician Program proceeds, the comments of interested physicians are welcomed. A list of the physicians serving on the Physician Advisory Council was published in the January issue of *Colorado Medicine*. Comments and questions may be directed to them or to the Division of Medical Economics and Professional Relations, 321-8590.

## ROCKY MOUNTAIN MEDICAL JOURNAL

Copies are still available of the special Centennial Year Book edition of the Rocky Mountain Medical Journal. This edition commemorates the 100th anniversary of the University of Colorado School of Medicine.

Take a look back through the school's colorful history and a look forward into the next century of one of the United States' outstanding medical teaching and research institutions.

Cost is \$8.40 per copy, prepaid, including tax, postage and handling. For more information contact:

First Interstate Bank  
of Denver's Health  
Care Professionals'

Banking Program specializes in personalized, comprehensive service for those in the field who practice or are in administration. We realize that in banking, like medicine, there's a world of difference between a simple answer and a simplistic one. You need more than a pat response to your banking questions. First Interstate has the people and the resources to provide you with a complete array of financial services, including innovative trust plans, facilities financing and investment programs. And, we offer all these services with personal attention and meetings scheduled for your convenience—at your office or ours.

You'll work directly  
with a professional  
banker who is able to

help you develop a customized financial plan for you or your employees. Our integrated team approach means you'll receive efficient, accurate responses to your questions. In addition, because we're part of an eleven western state banking network, you'll enjoy personal attention and have the resources of First Interstate Bancorp, the eighth largest banking system in the nation, behind you.

To find out how you can benefit from First Interstate's Health Care Professionals' program, contact Shirley Good, Assistant Vice President, Health Care Banking Department at 572-1776.

# Henry K. Silver

*by James J. Delaney, Jr., MD, CMS Historian*

Henry K. Silver, MD, the current Dean of Admissions of the University of Colorado Medical Center and a professor of pediatrics is a workaholic who has recently completed 25 years of service to the education of health professionals in Colorado.

He was born in Philadelphia, Pennsylvania in 1918. His father was a produce merchant who died of a ruptured appendix when Henry was seven years old. His mother remarried and the family moved to southern California where he received most of his education. His only sibling is a half sister. His

undergraduate education was at UCLA. He was admitted to medical school at the University of California in Berkeley after three years of college.

In those days admission to medical school depended almost entirely on grades, and one applied for admission much as one applies for admission to an undergraduate program today. He completed his formal medical school training in 1941 but did not receive his MD degree until he completed a straight pediatric internship at the University of California Hospital in San Fran-

cisco in 1942.

He then began an abbreviated residency in pediatrics at the Philadelphia Childrens Hospital. He returned to the University of California in 1944 where he was still nominally a resident, but also assumed the position of an instructor. It was at this time that he met C. Henry Kempe, MD, who was to play a major role in his future life. Dr. Kempe was a product of the accelerated medical school curricula of the war years. They worked together on a variety of projects.

After completing a fellowship he stayed on at the University of California as an assistant professor until 1951 when he moved on to Yale as an associate professor.

C. Henry Kempe was appointed Professor and Chairman of Pediatrics at the University of Colorado in 1956 and invited Henry Silver to come to Colorado as a professor in 1957. He has been here ever since. When he first came to CU he remembers the physical facilities as being the worst he had ever seen and the optimism and spirit of the faculty as being the best he could imagine. He says Dr. Kempe persuaded his faculty that they were good and they all believed they were and responded accordingly. There were four full-time faculty in pediatrics when he came. There are now about 90.

In 1962 Dr. Silver became State Chairman of the American Academy of Pediatrics. This local organization was smaller and less active than it is now. His compulsiveness drove him to use his position to advantage. He recognized that there was a shortage of quality pediatric care in many areas of the state, so he began looking for ways to meet this need. The first Nurse Practitioner Program was the result of his efforts. The first group of nurses completed their training of 1965 and were enthusiastically received by local practitioners, according to Henry. At about the same time the physicians' assistant movement was beginning to be promoted also. There was a perceived shortage of physicians and people who had worked with military corpsmen recognized that non-physicians could provide a lot of technical assistance in the care of patients. Dr. Silver felt that non-physicians could be trained to do more than technical procedures. He

*Henry K. Silver, MD*

put his ideas to work by developing the Child Health Associate Program, which remains a unique allied health program and has served as a model for other programs. He spent many hours developing a curriculum, guiding enabling state legislation and finally initiated the program in 1969. The first class was graduated in 1972 after two years of formal training, followed by a one-year internship.

In 1979 he was appointed Associate Dean for Admissions at the medical school. As those who have preceded him know, there is a great potential for frustration in this job. Whenever there is intense competition for a position as desirable as admission to medical school, there are bound to be many complaints and pressures regarding both successful and unsuccessful candidates. Dr. Silver feels that as long as he achieves his goal of making the admissions process fair to all applicants, he can accept the frustrations of the job with tranquility.

In describing the selection process, he says he has set up a system that he feels is eminently fair. He claims that almost everyone who criticizes the selection process usually is satisfied after learning how the process works.

There are several factors that are used to give each candidate a numerical score based on a rather complicated, computerized statistical formula. The factors include:

1. Academic performance as measured by overall grade point average, grade point average in science and mathematics courses and GPA in the last full year of study.
2. Medical school admissions test scores.
3. Evaluation on personal interviews with two members of the 18 person admissions committee. Three members of the committee are from the community.

The average GPA of the last few classes has been  $3.6 \pm 0.05$ . There is no minimum GPA for a candidate, but it would be an unusual individual who would be considered with a GPA of less than 3.0. Possible MCAT scores range from 1-15. The average score of all candidates taking the exams is 8. The average score of the last few classes at UCMC has

been 9.4. Each candidate who is seriously considered for admission is required to have two 45 minute interviews. The primary purpose of the interview is to evaluate the "overall potential" and qualifications of the candidate. There are no written guidelines for the interviews, but Henry says all interviewers have worked together enough so that there is a general consensus on how to conduct and score interviews.

All candidates have provided biographical information and have

---

"Dr. Silver felt that non-physicians could be trained to do more than technical procedures. He put his ideas to work by developing the Child Health Associate Program, which remains a unique allied health program and has served as a model for other programs."

---

been asked to write a personal narrative comment in which they can discuss anything else they want the admissions committee to know about them. All the information about an applicant is available to the interviewers and reviewed before the interview begins. In addition to the above-mentioned criteria, the committee tries to determine the interest and motivation of the applicant in being a physician.

In this regard an applicant's involvement, or lack of involvement, in a health-related activity can be revealing. Just because a candidate indicates that he or she knows what it means to be a doctor may not be enough. Has the candidate actually had direct patient contact? How did this affect him? Was he able to have an effect on the patient?

Another factor that affects the scoring of the interview is the manner in which a candidate responds to questions regarding hypothetical, ethical and clinical situations. Some examples of such questions include how to deal with a middle-aged man with hypertension who refuses to take the physician's advice or the medication that was prescribed, or

how to deal in a general way with a pregnant teenager.

Interviews are held on Friday afternoons beginning in October and ending in February or March. The committee also meets together from 3 to 6 on Monday afternoons to review applicants' files. Each member spends an average of eight hours per week on admissions business. Dr. Silver reviews all applicants' scores and begins offering admission from October on to the superior candidates.

The final selection process is completed by the first week of March by which time one-half of the places in the class have been filled. A final computerized print-out lists candidates by score and rank. The remaining positions in the class are offered on the basis of the candidates' ranking on this print-out. In addition to the candidates accepted for admission, the next are selected according to their ranking on the list when openings develop in the class. Alternates may be selected from the list throughout the spring and summer and as late as the first week of classes.

Henry personally meets with any candidate who fails to gain admission if the candidate so requests. He attempts to tell the candidate the exact reasons why he or she failed to be admitted and to provide information that may be of value to them. There are numerous advantages to the candidate if he or she wishes to take advantage of this opportunity to meet with him.

Dr. Silver recently wrote an article in the *Journal of the American Medical Association* regarding the pressures that are placed on medical school admission committees. It makes interesting reading for those who might have a child or friend thinking about medical school.

Henry continues to teach at all levels of medical education, is a pro-life writer as well and I'm sure has several new ideas about medical education and manpower needs revolving in his fertile mind. There are many other interesting facets of this man's professional career. He has received many honors and awards, is a member of numerous organizations and even has a syndrome named for him since he was the first person to describe the clinical findings.

# Trials of a Jail Physician

by Sheila Swan,  
Publications Editor

The expectant mother in Greeley knew the importance of proper obstetric care. Every time she was pregnant and began to go into labor, she would arrange to be treated by the same physician she had had with her previous pregnancies. The catch is that in order to contact his physician, she would commit a misdemeanor, get herself arrested and arrive at the county jail in time to deliver.

Her doctor was Tom Flower, DO, a family practice physician who is also the jail physician for Weld and Larimer County jails. Dr. Flower has

worked with the Weld County Jail since June, 1978 and with Larimer since October, 1981. Although he had considered working in prison health care at one time, he became involved with the jails "by chance," through the recommendation of a local internist.

Dr. Flower said he spends approximately 25% of his time, or about one and one-half days a week, working at the jails. However, he added, he is on call 24 hours a day.

According to Tom Flower, "jail health care is still one of the underserved areas of health care" in

our society. Underserved areas are nothing new to him, however, since he spent five years working in migrant health clinics.

Dental disease and psychiatric problems are two of the biggest health care concerns in the jails, Dr. Flower said. "About 30% of the jail inmates have mental health problems," he noted. Because of state funding cutbacks, many mental health patients have been released from state hospitals. The result is that "some folks are receiving their mental health care from the jails, which should not be the case."

One of the problems with providing quality medical care to jail inmates is that "they do not take care of themselves on the outside," Dr. Flower said. Repeat offenders often wait until they get to jail to take care of their health problems, he added.

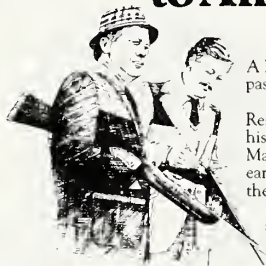

The jail health care programs were already set up when Dr. Flower took over as jail physician for Larimer and Weld counties. However, he developed the procedures and protocols for the two jails. Although they differ in facilities, programs, etc., both jails have in-house mental health counselors, nursing staff and consulting dentists. Inmates are sent out to see medical specialists as needed. Larimer County has a visiting psychiatrist two days a week.

The Larimer County Jail also has an extensive recreation and exercise program, which includes classes on how to quit smoking, nutrition, GED classes, etc., for the inmates. The exercise program, Dr. Flower commented has "decreased tension" among the inmates. The county is also planning new jail facility quarters which will have an in-house dental component. One of the administrative problems at the jails is the "high turnover of nursing staff," Dr. Flower said. He said this turnover is due to the high pressures of the job and the lack of continuing education in the area of jail health care.

The search for continuing education in jail health care is what first brought Dr. Flower into contact with the CMS Jail Health Care Project. He is now a member of the Committee on Medical Care in Correctional Institutions.

Jail health care accreditation is growing, but slowly, according to Tom Flower. The first Colorado jail

## From One Landmark to Another.

A Denver Landmark is gone, but its past is not forgotten.

In the late 1800's Sullivan's Reservoir had a long and colorful history with water disputes, Bat Masterson and gunfights. In the early 1950's it became the home of the Cherry Creek Gun Club.

Today the area has been appropriately named Gun Club Green and represents one of Denver's most exclusive and

distinctive residential communities. Located at one of the highest points in Southeast Denver—Gun Club Green offers unprecedented custom built homes (sites also available). It encompasses a magnificently landscaped private park in a country club setting. Including: security entrance, trout ponds, jogging trails, tennis courts, swimming pool and an exercise pavilion.

Gun Club Green. An extraordinary life-style starting at \$165,000. The high spot 2½ blocks north of Tamarac Square at 8101 East Dartmouth Ave.

received accreditation in the summer of 1981, he said. "Basically these programs have resulted from (inmates) lawsuits," he said.

"Sheriffs are becoming aware of their legal responsibilities," in jail health care, he noted. Additionally, people are becoming more aware of the problem of jail health care, due to publicity from such lawsuits and from vehicles such as the CMS Jail Health Care Project newsletter.

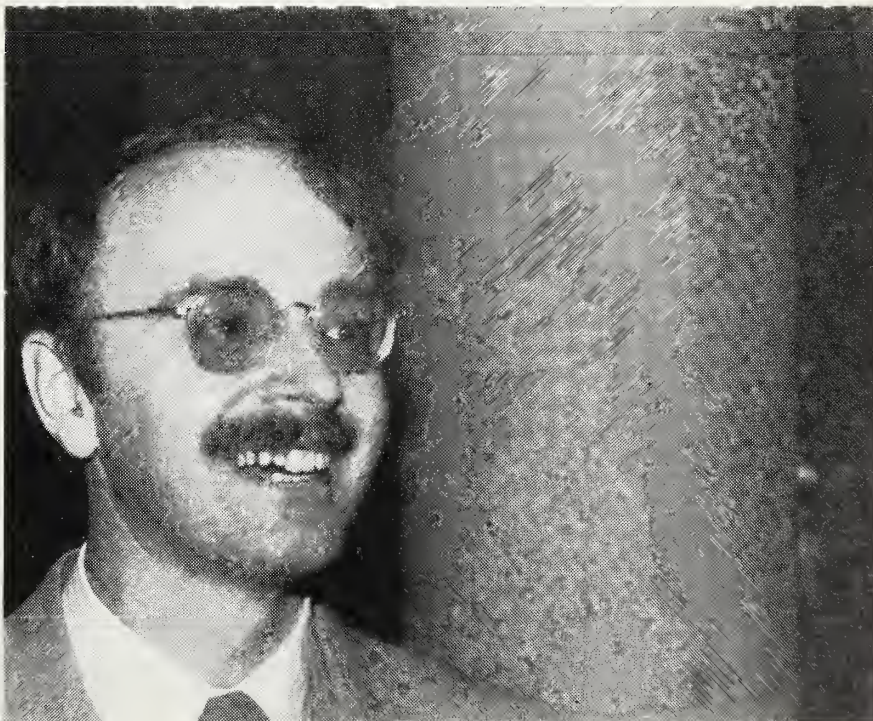

Dr. Flower mentioned two areas of need, the fulfillment of which could help to facilitate better jail

health treatment. One is the need to standardize the medical care forms used in Colorado jails and prisons. Such standardization would help to prevent the repetition and duplication of medical tests and physicals given to inmates who are moved to different jails, or who go on from jail to prison.

Another area of need is jail health care continuing education for physicians and allied health personnel who work with jail inmates. "There are no programs yet to my knowledge," he said.

Left to right, Capt. Al Minisch; Karen Mack; Larimer County Sheriff Jim Black; Governor Richard A. Lamm; CMS President-elect John Whitesel, MD; Larimer County Jail Physician Tom Flower, DO. Governor Lamm presented Larimer County Jail with the AMA/CMS Jail Health Care Standards Accreditation Certificate on February 4. Three other county jails, Weld, Montrose and Denver, also received certificates of accreditation at the ceremony.

# Rural Physicians and Continuing Education Programming

*by Watson A. Bowes, Jr., MD, Professor, Department of Obstetrics and Gynecology, University of North Carolina; George E. Fryer, Jr., MA, MSW, Instructor, Department of Preventive Medicine, and Evaluator, SEARCH program, University of Colorado School of Medicine, and Francis M. Raley, MD, Medical Coordinator for the Western Colorado Area Health Education Center.*

## Abstract

Schools of medicine have drawn criticism in the last decade for their neglect of the needs of physicians practicing in underserved communities. Failure of these institutions to sponsor quality continuing education for rural physicians has been cited as a detriment to the health professional environment and retention of manpower in underserved areas. The survey data to be discussed in this article documents the gap between available resources from the medical school and the continuing education (CE) needs of rural physicians. Area Health Education Center (AHEC) programs, developed during the 1970's, have identified a dedicated core of rural physicians with both the interest and expertise to complement the continuing education efforts sponsored by schools of medicine.

## Introduction

In the summer of 1980, SEARCH (Statewide Educational Activities for Rural Colorado's Health), an AHEC program sponsored by the University of Colorado Health Sciences Center, undertook a CE topical needs assessment among physicians practicing in its 50 county service area. All physicians of the program's service area were surveyed. Major

benefits from this survey have been described previously.<sup>1</sup>

SEARCH offers continuing medical education programs in underserved areas as a means of retaining local rural practitioners<sup>2</sup> AHEC is intended to be an indirect attack on the problem of the inaccessibility and lack of continuity of quality health care services from which many Americans suffer. It emphasizes the allocation of educational resources, particularly those of medical schools, to underserved areas.

This article examines the capacity of medical schools to meet documented needs for continuing education, and prescribes a role for AHEC in coordinating rural practitioner and university personnel resources.

### Method

A one page, eight item survey was mailed to each of the 1,123 physicians practicing in the SEARCH service area. Provision was made to determine the sources of difficulty encountered in their participation in continuing education activities, as well as the clinical topics they deemed most meaningful. Each topic which was cited by a respondent was categorized by the clinical department within the University of Colorado School of Medicine for

which the topic was most relevant.

The number of full-time faculty members in the respective clinical departments at University Hospital was used as a measure of that department's capability to respond to the need for continuing education in the rural areas. The proportion of the total number of CE requests to which an individual department would be expected to respond was compared to the proportion of the total number of faculty that are in that department. The ratio of the proportion of faculty to the proportion of CE requests is expressed as the "CE response index" for each department. The higher the CE response index, the more favorable is that department's position in having resources to meet requests for CE in rural areas.

### Results:

345 physicians returned completed questionnaires. 265 of these individuals, 23.6% of all surveyed, identified at least one CE topic for which they perceived need for presentation. A total of 648 responses were received; 2.5 per respondent. As an example, Table 1 lists the individual items that were listed on the questionnaire that were categorized under obstetrics and gynecology. There were 63 in-

dividual responses. There were a few items which could have been listed under other major departmental headings. An example is sexually transmitted diseases which might have also been listed under infectious disease. There were only a few ambiguous items that might have been listed under two or more departments.

Table II describes clinical departments, e.g. their percentage of total University of Colorado School of Medicine faculty, the percentage of CE requests and the CE ratio listed by rank order of CE ratio from highest to lowest. The lowest CE ratio is awarded the department that has the fewest faculty members in relation to the number of requests for continuing education.

There were 14 departments with at least three faculty members for which there were five or more requests for CE topics. For six departments, the proportion of total CE requests was approximately comparable to the proportion of faculty represented in that department. In three departments, Orthopedics, Ob/Gyn and Dermatology, there was a very low CE index indicating that the demand for CE far exceeds the department's capability to respond to the need. In five departments, including Radiology, the pro-

portion of faculty was relatively greater than the proportion of the CE topics requested.

## Discussion

One important mission of medical schools is the provision of quality continuing education for practicing physicians. Yet medical schools are disadvantaged in their efforts to provide continuing education. One of the problems is that resources within the medical school do not meet the demand for continuing education. This fact is perhaps best illustrated in the case of Orthopedics. (See Table 2.) There was substantial demand for presentations of CE topics (6.7% of the total) within this major area. The department presently consists of on-

ly four faculty members (1.1% of the faculty). On the other hand, Preventive Medicine, in which the rural physician's CE interest was low (1.1% of the total), has relative to other departments a generous number of faculty members (5.6% of total) to respond to the CE requests.

The demand for CE in several departments thus exceeds the supply of personnel available to meet this demand, due to the educational needs of medical students and residents. As a result, many commercial providers of continuing education have emerged on the scene.

Commercial providers have understandably welcomed the opportunity to fill the void created in

lucrative urban/suburban markets. However, travel and other costs cut sharply into profits from programming in health care in relatively underserved areas. These offerings will usually be attended by only a modest number of physicians.

AHEC coordination of medical school and rural service area resources should prove beneficial. In addition to facilitating the exchange of need and resource information between rural physicians and members of school faculty, AHEC can identify among rural practitioners, individuals with both the expertise and the interest to present continuing education instruction.

For rural physicians who present CE, less travel will be required because they practice within the AHEC areas in which the courses will be offered. Most program participants will know the local instructors, with whom many have had long-standing personal and peer relationships. As instructors, rural physicians have a better understanding of the needs and professional circumstances of those physicians taking part in the programs. Since the individual who presents material lives in the same rural community, other rural physicians have someone nearby to whom they may refer patients when appropriate and with whom they may confer as needed.

A dramatic recent migration of medical specialists into rural areas has been documented nationally.<sup>3</sup> Thus, such continuing education courses in rural areas could provide economic incentives to rural practitioners and foster a spirit of camaraderie, mutual confidence

and interdependence. Utilizing local resources also would make the delivery of medical services in underserved areas more systematic.

There is interest among rural physicians in discharging this responsibility. In response to the survey through which needed CE topics were determined, at least one rural physician volunteered his/her services and expressed interest in course presentation in each of the four most requested areas of medicine. Rural physicians who precept University of Colorado medical students have often commented that the experience fulfills their need to teach. CE presentation should gratify the same basic need.

The involvement of members of the faculty of medical schools, particularly in very specialized areas, should be part of any comprehensive continuing education program for physicians practicing in underserved areas. The cornerstone of these programs should be judicious use of rural physician resources. The role of AHEC in coordinating these resources is an important one.

Perhaps the best example of AHEC coordination of local physician and school of medicine resources is a program on orthopedics scheduled for the spring of 1983 in Crested Butte, Colorado. Orthopedics was one of the most requested topics among SEARCH/AHEC surveyed physicians. The content of Table 2, however, indicates that the capacity to respond of UCMC faculty members in that clinical department is low. Therefore, rural physicians were canvassed by AHEC personnel in an effort to arrange instruction in this area. A number of qualified rural physicians, in this case orthopedists, volunteered their services. Presentation will thus be made by individuals whose expertise in the field is well-established. Preliminary records of registration indicate that the sessions will be very well-attended. Instruction will be oriented toward the needs of primary care physicians rather than orthopedic specialists.

A member of the faculty of the school of medicine will conduct a session devoted to recently developed technology and clinical techniques in orthopedics. Thus, optimal use of the limited resources in this field of the University of Col-

orado School of Medicine is being made.

AHEC's coordinating role consists of the following functions:

1. determination of rural physicians' self-perceived continuing education needs;
2. publication and dissemination of an analysis of these needs to individuals and organizations that provide continuing education;
3. identification of rural physicians practicing in a geographic area of reported need for a given CE topic, who are interested and qualified in presenting instruction;
4. solicitation of the appropriate clinical department of the school of medicine for participation in the proposed course, resources permitting;
5. coordination of rural and school of medicine physician instructors in overall course design;
6. administrative arrangement (facility reservation, registration, publicity, course evaluation); and
7. subsidization as required.

The University of Colorado has for

some time recognized the potential contribution of rural practitioners to its educational processes. Through SEARCH, it has begun to tap these resources. AHEC has brought to bear the expertise of rural health professionals who can present continuing education programs.

Medical schools can become more responsive to public needs. AHEC-sponsored activities are a symbol of the concern of a medical school for the welfare of its previously neglected constituents.

## Rehabilitation Groups of the American Cancer Society Reach to Recovery

Reach to Recovery is a rehabilitation program for women who have had breast surgery. It is designed to help them meet their physical, psychological, and cosmetic needs. Volunteers, who have been selected by their doctors and have completed training, visit patients in the hospital with the physician's approval. No medical advice is given but compassion and emotional support are available.

# Marriage to a Physician: The Stresses and Responsibilities

*A Comparison of the Roles of Physicians' and Lawyers' Wives*

by Barbara Day Lorch, Ph.D, University of Colorado at Colorado Springs and Lou Ellen Crawford, Ph.D, University of Denver

Physicians have a considerably higher incidence of drug abuse, suicide and marital discord than the national average, remarked M. Roy Schwarz, Dean of CU's Medical School in a speech he gave at the CMS Annual Meeting last September. Additionally, physicians' wives suffer a greater incidence of alcohol, drug abuse and marital problems than the average American woman, according to Carla Fine in her recent book, *Married to Medicine*.<sup>1</sup>

An understanding of one potential source of marital and family difficulties which could be a contributing factor to alcohol and drug abuse and suicide may be found by examining the influence of the husband's occupation on his wife. Occupations, especially the absorptive ones which take up a large portion of people's time, in many cases define tasks and performance for other family members. Fowlkes<sup>2</sup> in a study of the successful careers of physicians and university professors points out that the importance of the wife's contribution to a successful career for her husband is more critical in some occupations than in others. The helpmate role is more likely to be characteristic of the wives of professional men than of wives in general due to the high degree of occupational absorption characteristic of the professions. It is the authors' purpose to explore the ways in which the roles of wives of men in two professions, law and medicine, of comparable occupational prestige, may be influenced by their husbands' occupations.

## Methodology

The authors recently conducted a research study of physicians' and lawyers' wives in Colorado Springs,

Colorado, to examine the effect of the husband's occupation on a number of variables, including current employment, desire for future employment, and advantages and disadvantages of being a physician's or lawyer's wife.

The sample of the study was a 50 percent systematic probability sample of physicians' and lawyers' wives in Colorado Springs, Colorado. The return rate on the mailed questionnaires was 49 percent — 79 physicians' wives and 78 lawyers' wives.

This paper will limit itself to only a few findings from the study and will deal with the relationship between husband's occupation and wife's role identity, role expectations, role performance, and reported disadvantages to her role as physician's or lawyer's wife. These findings may shed some light on one source of marital and family difficulties that are likely to arise for physicians' wives.

## Description and Sample

Physicians' wives in this study were somewhat older than lawyers' wives with a mean age of 42.7 compared to 37.4. These wives were well-educated with about three fourths of both physicians' and lawyers' wives having attained a bachelor's degree or above. More lawyers' than physicians' wives had obtained graduate degrees (24% compared with 14%) and more lawyers' wives (68%) than physicians' wives (39%) attended school after their marriage.

The average number of years married at the time of the study was 18.9 for physicians' wives and 13.9 for lawyers' wives. More lawyers' than doctors' wives had no children and the children of lawyers' wives were generally younger than those of

*"Physicians' wives suffer a greater incidence of alcohol, drug abuse and marital problems than the average American woman."*

physicians' wives. This is most probably a reflection of the younger age of the lawyers' wives in our sample and the fact that the average number of years they had been married was less than for the physicians' wives.

Wives of both the physicians and lawyers in the study tend to come from middle and upper-middle class backgrounds. More lawyers' wives (38%) than physicians' wives (25%) were currently employed outside the home, and twice the percentage of lawyers' wives (14%) as compared to physicians' wives (7%) who were not currently employed stated that they would definitely like to obtain a job outside the home.

## Role Identity

When wives in this study were asked their perception of the ways in which members of the community viewed them, 70% of the physicians' and 56% of the lawyers' wives reported that they thought they were perceived as housewives, wives or physicians' or lawyers' wives. When asked to indicate the roles with which they most closely identified, 51% of the physicians' wives and 30% of the lawyers' wives reported housewives, wives or physicians' or lawyers' wives with an additional 28% and 30% respectively identifying primarily with the role of parent. Their perception of the community expectations of a helpmate role was somewhat higher than their own identification with such a helpmate role, and in both cases that identification for physicians' wives was higher than for lawyers' wives.

Many of these wives are selecting a role as the basis for their identity which is merely an extension of their husbands' roles rather than an individual role. Despite the fact that these wives are highly educated and involved in important community activities, with some of them employed outside the home, they predominantly identify with the

traditional female roles of wife, housewife and mother just as other married women do.<sup>3</sup> The difference is that the specific requirements for these roles are greater for wives of physicians and lawyers than wives in general as will be shown in the next section of this article.

### Perceived Community Role Expectations and Wife's Compliance With These Expectations

Wives of both physicians and lawyers feel that they are expected to behave in ways not expected of wives in general. In answer to the question: "What do you feel is expected of you as a lawyer's or physician's wife that is not expected of wives in general?" 73% of the physicians' mentioned one, 13% two, 13% three, and 1% four expectations. For lawyers' wives 81% mentioned one, 11% two, and 8% three expectations. The most frequently mentioned expectations were filling in for one's husband during his absences, doing volunteer work, being intelligent and well-informed, and being impeccable in appearance and deportment. One hundred percent of these professional wives mentioned at least one thing that was expected of them that was not expected of wives in general. This is a strong indication that they perceive their roles as wives of physicians and lawyers as different from those of wives generally.

These wives' perceptions of activities which members of the com-

munity expect them to perform as physicians' or lawyers' wives, as well as the community activities in which they actually participate, are quite similar for wives of physicians and lawyers with the top three for each including volunteer work, membership in community organizations and membership in the women's auxiliary of the Medical or Bar Association. Leadership in community organizations, church participation, entertaining those in the medical or law community, and sacrificing one's personal interests to further the husband's career were also frequently mentioned. These are similar to the role expectations of executives' wives.<sup>4</sup> (See Table 1). Only in their greater participation in leadership in community organizations and entertainment of those in the medical and bar community did physicians' wives differ significantly from lawyers' wives.<sup>5</sup>

The greater participation in leadership roles in community organizations by physicians' wives may be due to the fact that in this sample their average age is five years older than lawyers' wives. Also, they may have more time to devote to such responsibilities since they have fewer younger children at home. The patient referral system in the medical profession might help to explain why physicians' wives reported more entertainment of those in their husband's professional community than did lawyers' wives. Goodwill and friendship of medical colleagues, as well as expertise, may

---

*"In the professions one's absorption in one's work is complete. . . Family members must somehow cope with this fact."*

---

be tied to the patient referral system in medicine, and entertaining could be one way of developing and maintaining that good will.

### Disadvantages of Wife's Role

Physicians' wives reported significantly more disadvantages to their roles than did lawyers' wives with only 1% of the physicians' wives compared with 37% of the lawyers' wives reporting none. Three of the most frequently mentioned disadvantages were (1) husband's absence and interruption of personal and family life — physicians' wives 67%, lawyers' wives 32% (2) role expectations of physicians'/lawyers' wives — physicians' wives 23%, lawyers' wives 8% and (3) society's misconceptions of them — physicians' wives 19%, lawyers' wives 23%. These findings indicate that physicians' wives associate significantly more disadvantages with their position than do lawyers' wives. Furthermore, their remarks indicate that physicians' wives perceive their role as a physician's wife as a heavy, double-duty one and regard this as a definite disadvantage of being married to a

Table 1. Occupation of Husband by Wife's Perception of Community Members' Expectations of Them and By Wife's Participation in Role Activities.

Role Activity	Community Members' Expectations		Wife's Participation in Role Activities	
	Wives of Physicians	Wives of Lawyers	Wives of Physicians	Wives of Lawyers
Member Women's Auxiliary of Bar or Medical Association . . . . .	53%	51%	62%	54%
Volunteer Work . . . . .	59%	54%	62%	68%
Member of Community Organization . . . . .	57%	56%	59%	68%
Leadership in Community Organizations . . . . .	39%	38%	44%	28%
Sacrifice Personal Interests to Further Husband's Career . . . . .	34%	28%	14%	10%
Entertain Those in the Medical or Law Community . .	43%	38%	52%	29%
Church Participation . . . . .	37%	31%	58%	51%
Other . . . . .	41%	36%	21%	15%

physician.

The large amount of time spent in work and work-related activities by physicians is an important factor in explaining the greater role demands and resultant disadvantages for physicians' wives. A comparison of husband's work or work related activities per week, as reported by their wives, shows 29% of physicians and 5% of lawyers work 70 or more hours per week; 33% of physicians and 19% of lawyers 60 to 69 hours; 8% of physicians and 33% of lawyers 40 to 49 hours; and 1% of physicians and 5% of lawyers under 40 hours. These findings support Greenwood's<sup>6</sup> contention that in the professions one's absorption in one's work is complete. It is a personal involvement which influences the after-work life and causes the line between work hours and leisure hours to disappear. To such a person his work is his life. Family members must somehow cope with this fact.

### Discussion of Findings

The helpmate concept is supported in this study. This research shows that four fifths of the physicians' wives and three fifths of the lawyers wives see their major role identity as a mere extension of their husband (wife, housewife, or lawyer's or physician's wife) or as a parent. Their view of the helpmate role is reinforced by the expectations which they perceive the community holds of them as physicians' or lawyers' wives and their compliance with the expectations by actual participation in these role activities. Such activities as membership in the medical or bar auxiliary, volunteer work in the community, membership and leadership in community organizations, church participation, entertaining those in their respective professional communities, and sacrificing personal interests to further their husbands' careers are activities which keep their husbands' names before the public and help to promote and maintain a positive image for them. This promotes and supports their husbands' careers and is in keeping with the professional culture associated with their husbands' occupations.

The similarities found in this study concerning the roles of physicians' and lawyers' wives are most probab-

ly due to their having the same class background and present class position, as well as being wives of professional men, thus being under the influence of a common, general, professional and class culture.<sup>7</sup>

The differences found in this study between the roles of physicians' and lawyers' wives, on the other hand, are likely due to the different subcultures of law and medicine which are variants of the general professional culture. Two main features of the physician's occupation that may produce role requirements for their wives that are different from those of lawyers' wives are the physician's long and unpredictable work hours and the colleague referral system on which they depend somewhat for their patients and for patient information. These two features could partially account for the more demanding role of the physician's wife than of the lawyer's wife.

Not only do physicians' wives, in keeping with their perceived role expectations, do all the things that lawyers' wives do, but they also are involved in more leadership positions in community organizations and do more entertaining of their husbands' professional colleagues. Additionally, they spend much more time filling in socially and in other ways for their husbands during their husbands' absences and coping with interruptions of personal and family life. This places heavy responsibilities and strain on them in handling home and family matters and frequently results in subordination of their own personal interests to those of their husbands. These factors, among others, cause physicians' wives to view their role as a physician's wife as a decided disadvantage of being married to a physician.

The high occurrence of suicide, drug abuse and marital problems for physicians, and the alcoholism, drug abuse and marital disharmony experienced by their wives (referred to at the beginning of this paper) most likely are affected by some characteristics of the profession itself. These involve excessive stress and strain associated with the long hours and great responsibility of the physician's job as well as easy access to drugs. Additionally, the heavy demands this occupation places on the physician's wife, and the fact that she regards the role of the physi-

---

*"Physicians' wives...are involved in more leadership positions in community organizations and do more entertaining of their husband's professional colleagues."*

---

cian's wife as a definite disadvantage of being married to a physician, as demonstrated by this study, may also be an important contributing factor.

## About Copic

This month you will be receiving the annual report of the COPIC Trust. The COPIC Trust is alive and well! This occasion deserves some reflection on how we got where we are in developing a professional liability program for Colorado physicians. I have been fortunate to sit on the Board of Directors of CMS over the past seven years and to have watched this evolution.

Initially I recall the yearly presentations to the board by Hartford and

the trips to Hartford by the CMS presidents, Curtis, Sawyer, Witham, Howard and Lewis. During these years of dealing with the insurance giant, Hartford's inflexibility became apparent. Many changes that we suggested couldn't get through the maze of insurance lawyers and executives and become reality. The insurance "crisis" in 1975-76 pointed out the need for Colorado physicians to have better control over their destiny.

If you want some hair-raising details on that episode, talk to Joe Pollard who was president of CMS

during the "crisis" year. Certainly a feeling by the CMS Board arose out of those early years that Colorado physicians needed their own professional liability company to have a better control over their insurance rates.

1979-80 saw our first attempts to gain that control. Through Mason Howard's initiative, an outside insurance consultant, V.O. Schinnerer and Company, was hired and we were able to get another professional insurance opinion about the Hartford program. It became apparent that there were methods

**"Through the Trust Colorado physicians should see a flexible program that can better meet their professional liability needs as well as control the ultimate costs."**

available to ultimately develop our own company and that we could save money by doing so.

During the year 1980-81 the Colorado Medical Society Professional Liability Trust was established, still under the Hartford umbrella. At the same time, V.O. Schinnerer's representatives, Tom Tucker and Steve Cohen, continued to educate the CMS board about the insurance industry.

Although we were operating our trust under Hartford, we still didn't have the flexibility to implement programs which were specially tailored to physicians' needs. Also, we were not able to develop the capital requirements ultimately needed for our own insurance company.

St. Patrick's Day, March 17, 1982, was a day of destiny for CMS. On that day the CMS board reached an impasse with Hartford, mainly over rate increases. The dispute was also over their rejection of our plan to develop the COPIC Trust as a separate and distinct entity, with the ability to develop capital reserves and to issue policies to CMS members.

At that meeting the CMS Board of Directors instructed Tom Tucker to seek reinsurance for the Trust from other companies. Within a week we had bids from the two largest rein-

## Help Available to Impaired Physicians

The Colorado Medical Society has had an impaired physician program for several years, at the direction of the CMS House of Delegates. The program is designed to assist physicians to confront their problems and find help. Physicians, family members and others also may gain access to the program by contacting the staff of the Division of Professional Relations and Medical Service at the CMS office in Denver, 321-8590. Physicians wishing to assist with the program are urged to contact the committee by calling 321-8590.

The other members of the committee are:

Barry R. Berns, MD, Windsor, 686-7611  
Edmund Casper, MD, Denver, 893-7377  
Telford A. Davis, MD, Durango, 259-0094  
Franklyn M. Newmark, MD, Lakewood, 238-8719  
David R. Rice, MD, Aurora, 343-4655  
Richard E. Troy, MD, Grand Junction, 242-7697  
Paul T. Yoder, MD, La Junta, 384-8766  
Lawrence E. Austin, MD, Pueblo, 542-5250  
N. Kenneth Furlong, MD, Englewood, 789-7928

If you know of a colleague who has problems with drug or alcohol dependency, or if you think you may have a problem, talk to one of the members of the CMS Physician Health and Rehabilitation Committee. The chairman, John S. Avery, MD, may be reached by calling his office in Boulder, 440-3088.

insurance companies in the world. Within a month we signed an agreement with North American Reinsurance Company. Thus the COPIC Trust was born.

What became apparent from these negotiations was that Colorado physicians had a good track record in the insurance industry. Our risk management program in particular was recognized across the country as a model for the industry. Thus the COPIC Trust was born.

The COPIC Trust began operation as a distinct entity on July 1, 1982. The past nine months have been gratifying to all who were involved in creating the Trust. We have seen all areas of the Trust take off and become reality. Policyholder services under the management of Pat Schultz have developed into a smooth operation, giving prompt and courteous responses to physician inquiries.

V.O. Schinnerer is developing the underwriting requirements. Bob Brittain continues his risk management work, screening new applicants and educating physicians in risk management. Bob continues to be innovative. A proposed preferred risk program is another result of his work. Our defense counsel, the firm of Johnson, Mahoney and Scott, attends our board meetings and continues to be active in COPIC.

Through these developmental months we have relied heavily on Tom Tucker for insurance advice. We have also added two insurance executives to our board, Bob Egner and Larry Thrower. They have already contributed direction to the board. Jerry Bowman currently is the administrative executive of the Trust. Plans are to hire a full-time president of the Trust within the next year.

As you can see, the COPIC Trust is alive and well. We appreciate the support of the 1,800 physicians who have already joined COPIC in its first nine months. Through the Trust Colorado physicians should see a flexible program that can better meet their professional liability needs as well as control the ultimate costs. Such programs as mini-trusts for group practices, a new physician premium plan, retroactive coverage for claims-made transfers and a preferred risk program already are or soon will be available.

# Is there a doctor on the road or at the game?

The Committee on Medical Aspects of Sports of Colorado Medical Society hopes to hear from physicians who share its members' interest and concern about medical coverage of running events and interscholastic athletic contests.

## 1984 HHS Budget Submitted

On January 31, the Administration released its proposed budget for the Department of Health And Human Services for the fiscal year starting October 1, 1983. The budget, containing no surprises, proposes outlays of \$289 billion for FY84 — \$14 billion more than in the FY83. A principal feature of the HHS budget is the Health Care Incentives Reform proposal, designed to contain rising health care costs through creating incentives for greater efficiency in the health care system. It is described in detail below.

As in most recent HHS budgets, the lion's share of the \$289 billion in outlays will go to Social Security which is to receive \$195 billion. The Health Care Financing Administration, which administers Medicare and Medicaid, will receive \$81 billion. The Public Health Service receives \$7.7 billion.

## Health Care Incentives Reform Proposal

The Administration's Health Incentives Reform Proposal incorporates many proposals that have been advanced by pro-competition advocates and in addition includes a variety of Medicare changes. The Health Incentives Reform proposal appears to represent the long-awaited "pro-competition" package that the Administration has promised for the last two years, only it is being proposed under a different name.

Basically, the changes being proposed in the Health Incentives Reform initiative can be grouped into six categories: (1) providing for catastrophic coverage for Medicare beneficiaries while increasing beneficiary copayments during the first 60 days of hospitalization; (2) adoption of prospective payment methodology for Medicare; (3) limiting the tax-free status of

employer-paid health insurance benefits; (4) Medicare vouchers; (5) freeze of physicians' Medicare reimbursement; and (6) other changes to reduce Medicare costs. The descriptions that follow are based on an HHS "Fact Sheet" — there has not yet appeared any legislative language to implement these proposals.

(1) **Catastrophic Coverage/Increased Copayments** — The Administration proposes that all covered hospital costs be paid for by Medicare after 60 days hospitalization each year. At present, Medicare hospital coverage expires after 150 days of consecutive hospitalization with escalating patient copayments between the 60th and 150th days. The proposal would alter the current formula for beneficiary cost-sharing for hospitalization as indicated on this chart:

Present System	
First day	Full cost
2nd-15th days	No cost-sharing
16th-60th days	No cost-sharing
61st-150th days	\$87.50 per day in 1984
91st-150th days	\$175 per day in 1984
After 150 days	No coverage

Proposed Change	
First day	Full cost (but only twice in any year at most, compared with no limit today)
2nd-15th days	About \$28 per day in 1984
16th-60th days	About \$17.50 per day in 1984
61st-150th days	New catastrophic coverage takes effect
91st-150th days	New catastrophic coverage in effect
After 150 days	New catastrophic coverage in effect

**Budget effect:**  
\$663 million in savings in FY84.

(2) **Prospective Payment of Hospitals** — this is the diagnostic-

related groups (DRGs) payment methodology that has already been unveiled by the Department of HHS (see LR of January 18, 1983). Basically it calls for hospitals to have their Medicare rates, on a total cost per discharge basis, set in advance, based on a different rate for each of 467 diagnostic-related groups. Rates could be adjusted based on a number of factors. Hospitals with costs of treatment lower than the DRG rate would keep the difference; if a hospital's costs are higher than the prospectively set rate, it would have to bear the difference and could not pass on the cost to Medicare beneficiaries.

(3) **Limitation on Tax-Free Health Benefits** — This is the controversial "tax cap" proposal. The administration proposes that employer contributions for health insurance of \$175 per month for family coverage and \$70 per month for individual coverage should continue to be tax-free, but that any contributions above those caps should be counted as income.

**Budget effect:**  
\$2.3 billion increased revenues in FY84

(4) **Voluntary Medicare Vouchers** — Under this provision, Medicare beneficiaries would be given the option of enrolling in private health insurance plans. The government would pay to the insurance plan chosen by the beneficiary an amount equal to 95% of the per person costs of the Medicare program. Private plans would have to provide coverage at least equal to that provided by Medicare to be eligible for selection. Beneficiaries who opt for the voucher would be permitted to re-enter the Medicare system. Where alternative plans are low-priced, cash rebates could be made to the beneficiaries.

**Budget effect:**  
No effect in FY84

(5) **Freeze Physicians' Reimbursement** — This proposal would freeze increases in physicians' reimbursement rates under Medicare's "reasonable charge" system for one year.

**Budget effect:**  
\$700 million in savings in FY84

(6) **Other Changes** — Other changes

proposed in the Health Incentives Reform proposal include:

- increases in Part B premiums and deductible (following one year freeze of Part B premium) (no savings in FY84 — \$313 million additional costs);
- defer Medicare eligibility to first day of month following a person's 65th birthday instead of first day of month in which he or she turns 65 (FY84 savings: \$201 million);
- expansion of competitive bidding for purchase of non-physician services and supplies (FY84 savings: \$9 million);
- temporary limit on hospital increases enacted last year would be tightened (FY84 savings: \$80 million);
- reimbursement to home health agencies for durable medical equipment would be reduced to 80% rather than the current 100% (FY84 savings: \$15 million);
- imposition of nominal Medicaid co-payments — \$1.00 per outpatient visit and \$1.00 per hospital day (FY84 savings: \$249 million); and
- extension of the reduction in federal Medicaid payments to the states beyond FY84 (no change in FY84 budget; \$525 million in FY85 savings).

### **Thirty-Seventh Annual Rocky Mountain Cancer Conference August 19, 1983**

The American Cancer Society, Colorado Division, Inc., will sponsor its 37th annual Rocky Mountain Cancer Conference on August 19, 1983 at the Marriott Hotel, Denver, Colorado.

The topics will be "Early Breast Cancer Detection/Nutrition and Cancer."

Registration deadline is August 5, 1983.

**For more information,** contact: Midge Cullis, Director, Professional Education American Cancer Society Colorado Division, Inc. 1809 East 18th Avenue Denver, Colorado 80218.

## **Advances In Health Education For The Young**

*by Nadya Thomas, CMS Division of Professional Services.*

*Prepared at the request of the CMS Council on Public Health.*

In the report "Objectives For The Nation" prepared by the U.S. Department of HEW in 1980, the following was stated: "School health education rarely addresses risk factor control and the impact of one's lifestyle on health in a satisfactory way."

Joseph Califano, Secretary of the United States Department of HEW during President Carter's Administration, wrote the forward to the U.S. Surgeon General's Report of 1979. He said, "While death from major acute infectious diseases plummeted between 1900 and 1970, the proportion of mortality from major chronic diseases such as heart disease, cancer and stroke increased 250%. I can compress what we have learned about the causes of these modern killers in three summarizing sentences. 1) We are killing ourselves by our own careless habits. 2) We are killing ourselves by carelessly polluting the environment. 3) We are killing ourselves by permitting harmful social conditions to persist — conditions like poverty, hunger and ignorance — which destroy health especially for infants and children."

Prevention of chronic disease means forsaking those bad habits which many people enjoy — overeating, too much drinking (alcohol), taking pills, staying up at night and smoking. These behavior patterns of Americans can be changed by adequate programs of health education in primary and secondary schools and even colleges. The benefits of community-based health education programs is evident. The case for improved health education programs in our nation's schools is supported by both health professionals and educators.

The Council on Public Health in conjunction with the Health Education and School Health Committee would like to make physicians aware of two excellent programs available

in Colorado: the Primary Grades/School Health Curriculum Project and the Colorado Teenage Health Teaching Modules. Both projects are cosponsored by a number of private and public agencies.

The Primary Grades/School Health Curriculum Project is a program designed to provide special learning experiences for students that will result in good health habits and attitudes and to promote care of their bodies. It is a means to achieve the goal of a healthy life. Maintaining health requires an understanding of the body's potential for health, recognition of specific threats to health, ability to prevent or avert those threats, and a lifestyle that cultivates good personal health practices. This program was created for grades K thru 8. In the curriculum children study their senses, feelings, and their bodies, because these are the resources they will have throughout their lives. Children learn early how alcohol, drug abuse and smoking affect the body. They learn the benefits of good nutrition and exercise. They learn they can assume the responsibility for how good they feel.

Teenage Health Teaching Modules is a comprehensive health education program for junior high and senior high school students. The program incorporates traditional health content and fundamental health skills into a set of sixteen modules dealing with the basic adolescent health tasks. The program design embodies the belief that adolescents who have an understanding of each of the developmental health tasks and some practice in applying the requisite health knowledge, skills, and attitudes are more likely to make choices that will enhance their health and well-being, now and for the future.

When this project was in the formulation stage the specific charge was to develop a program that (a) is built on the assessment of health problems/health risks in the population, (b) incorporate innovative teaching strategies appropriate to the adolescent pupil, and (c) is so structured as to assure acceptance and replicability in a wide variety of educational settings.

The result is the above two pro-

Chairman, Environment Committee

*Ed. Note: This paper has been approved for publication by the CMS Council on Public Health and CMS Board of Directors.*

The CMS House of Delegates adopted a resolution at the 1983 Interim Meeting asking Congress to address the issue of asbestos-related illness. (See minutes contained in this issue)

Asbestos is a commercial term used to describe a mixture of hydrous silicates of magnesium, sodium and iron in various proportions and in fibrous form. The two major types are the three amphiboles (crocidolite or blue; amosite or brown; and anthophyllite) and chrysotile (white).

The amphibole, especially the crocidolite, fibers are longer, thinner and straighter than chrysotile fibers, which are thicker, shorter and serpentine. Both may incite fibrosis, but the latter appear to be more readily cleared from the lungs and hence are less dangerous than the amphiboles.

Asbestos for many decades has been the cheapest and best heat and fire-resistant material available. World production still exceeded six million tons per year in 1977, but has been drastically curtailed since then.

Exposure to asbestos may occur in many ways; they include the mining and manufacturing of brake and clutch facings, textiles, fabrics, tiles, pipes, ceramics and cement; cutting or drilling asbestos-containing

# Preliminary Program

14th Annual Meeting of the Colorado Medical Society, October 13-15, 1983  
Sageamarron Resort, Near Durango, Colorado  
**Scientific Session: Brave New World of Medicine—1984**

Friday, October 14, 1983

## —Futurism: Survival in an Age of Change

### The Future of Medical Care as We Know It

8:30-9:00 a.m.

### The Hospital and its Medical Staff

9:00-10:00 a.m.

Competition, the fire-breathing dragon, has brought with it a totally new language — DRG's, new cost reimbursement profiles, and an end to cost shifting. Hospitals have suddenly been placed in the difficult position of a major cost containment effort with many factors involved over which they have no control; i.e. utilization of services by their medical staff.

These problems will no doubt impact on the hospital activities of the medical staff. Out of this sometimes chaotic environment a new partnership of cooperation, communication and compromise will evolve to meet this challenge. There are important steps that need to be taken to deal with these changes. The medical staff will, of necessity, be involved in the more intricate decisions of hospital management.

## II—High Technology

### The Ultimate in High Technology: The Newborn Intensive Care Nursery

10:00-11:00 a.m.

One might question this area of clinical medicine as representative of the "ultimate" in high technology. The advances in the field of neonatology in the first decade are a tribute to the pioneers in this field. We no longer talk about survival of one and one-half to two lb. infants, but rather expect it. The frontiers of technology are now

pushing on to 500-700 gram babies, and no doubt will progress to even lower birth weights.

Society is also faced with the financial burden of their care as well as the moral implications of their survival. Infants with less than optimal intelligence, in a technological world, may face bleak prospects for meaningful employment.

Has the level of care in neonatal nurseries improved the overall outcome of these infants, and where will the future take us?

## III—Preventive Medicine

### The Environment and Workplace as a Health Hazard

11:00 a.m.-12:00 p.m.

The age of high technology has brought with it a multitude of social and medical problems that seem to geometrically increase. Organic and psychoemotional disorders are now increasingly linked to the ecology of our planet, our work place, and even our final castle "our home." Perhaps we are beginning to awaken to the reality that The Earth is "man's castle."

Cancer and birth defects appear to be increasingly related to the by-products of industrial life on this planet. Fifty thousand chemical products are presently in use in this nation. Five hundred new ones are developed each year. We know very little about their effect on our health. Whose responsibility is it to deal with these issues?

In the next decade what will the work place look like, or "How do you learn to love a computer?"

## IV—Auxiliary Presentation

### Recognizing Drug Abuse and Alcoholism

1:00-2:30 p.m.

The Colorado Medical Society Auxiliary will present a program on drug abuse. The guest speaker will be Joseph

R. Cruse, MD, who is Medical Director of the Betty Ford Center at Eisenhower Medical Center in Rancho Mirage, California.

In addition to his medical director position, Dr. Cruse serves on local, state and national alcohol advisory boards and is on the Board of Directors of the National Council on Alcoholism. Dr. Cruse has given many lectures and has publications and papers focusing on alcoholism.

The presentation by Dr. Cruse for the Scientific Session at the Annual Meeting will focus on recognizing drug abuse and alcoholism and current treatment programs.

## **V—Aging**

### **Even You Will Have to Face It! (will deal with psychology of aging and dementia)**

**2:30–4:30 p.m.**

Man's brief journey across the sands of time brings with it a new set of problems as we change from Toffler's "first and second wave civilizations" to a "third wave society."

The problems of an aging population must be addressed. The pathopsychology of aging still remains a vexing mystery. Some of the major building blocks are beginning to fall into place and will be discussed.

It is hard to imagine that, at one time, man's average life span was approximately 30 years. As the great limiting factors of disease and famine were defeated we were faced with an aging population which manifests new problems. A major new problem of importance is that of dementia which has now become one of the leading medical problems in the nation. As there are indeed genetic implications attached to this diagnosis, it gains even more importance.

What is this disorder we call dementia? What causes it? Can we prevent it? How will society deal with it?

**Saturday, October 15, 1983**

## **Workshops**

### **I—Dealing with the Patient that Doesn't Make You Feel Good**

**9:00–10:00 a.m..**

All health professionals experience moments of anger, frustration, and despair in some of their contacts with pa-

tients. Our training leaves us inexperienced and ill-prepared to deal with the hysterical, demanding, angry, seductive, and manipulative patients we confront in our practices.

The objective of this workshop is to assist health professionals in recognizing these situations, gaining insight into their own feelings, and learning the skills needed to effectively deal with these problems.

This workshop is perhaps better titled "How to Feel Good About Yourself After a Day of Practice."

## **II—Modern Cardiology and Cardiovascular Surgery: A Cost Effective Approach to Today's Technology**

**10:00–11:00 a.m.**

This past decade has seen a phenomenal change in diagnosis, medical management, and surgical treatment of cardiac problems. Keeping up with the technology, drugs, and clinical decisions involved in each patient's care becomes an ever increasing problem.

This workshop will provide a cost effect overview of changes in these fields. Its basic purpose is to assist the physician in understanding the benefits and shortcomings of the new technology and medications in making day-to-day decisions for their patients.

This workshop will provide an updated picture of cardiac bypass surgery, angiography and angioplasty, the place of medical management in cardiology, and what's new in diagnostic technology (non-invasive coronary angiography, etc.)

## **III—Ethical Problems in Medical Practice: Difficult Decisions at the Bedside**

**11:00 a.m.–12:00 p.m.**

An era of regulation, cost containment and public awareness makes it increasingly important that we develop our own means of assisting patients, families, physicians, and other hospital staff with the problems posed by such topics as:

1. The government's role in medical ethics
2. "Do not resuscitate" orders
3. The resuscitation of severely handicapped newborns
4. Issues beyond the "legal consent"
5. New reproductive techniques

This workshop will present one hospital's experience in dealing with such problems.

materials; applying and removing insulations of walls, electrical cables and pipes; insulation and space filler in shipbuilding; and loading and unloading sacks of asbestos during shipment. Asbestos shields were once used in hair dryers and gas masks. Asbestos-containing material has been sprayed onto the walls and ceiling of buildings for insulation; it dries out in time and flakes off into the air. The restoration and demolition of old buildings commonly containing much asbestos will continue to present a hazard unless workmen use effective respirators. Exposure may also occur non-occupationally; from living near asbestos mining, milling, construction and demolition and from the dust brought home on a workman's clothing.

Materials currently used in place of asbestos include fiberglass and rock wool, neither of which are of much use in making textiles and fabrics. Metal wool is useful for disc brake linings. Other adjustments have been tried, but nothing so far has come close to the usefulness and the economy of asbestos.

The diseases with which asbestos exposure is associated are: Asbestosis, lung cancer, colon cancer and pleural peritoneal mesothelioma.

## CMS Membership Survey Gives Current Directions

In October, 1982, Colorado Medical Society Executive Vice President R.G. ("Jerry") Bowman reported to the Board of Directors that the Member Services functions of CMS needed a current picture of the membership makeup, in order to better shape its programs, projects and ancillary services. Mr. Bowman added that "the membership changes constantly in terms of physician age, length of practice, specialty

interests etc..." This survey, he said, would be used to construct a more definitive questionnaire to go to a broader cross-section of CMS. As a result, a questionnaire was authorized to be sent to a small sampling of members in early 1983. *Colorado Medicine* shares some of the results of this first poll.

- A large majority of CMS membership are members of the COPIC Trust, which corroborates findings recently reported by the Trust in its third quarter.
- That same large majority uses the CMS Physicians Directory on a regular basis.
- More than a third participate in other CMS-sponsored workshops and seminars.
- Three quarters of the physicians travel away from their practice area in Colorado at least twice a year. More than half travel out of Colorado at least twice each year. The majority of these trips are business-related.
- More than a third of the members receive and read *Colorado Medicine* thoroughly each month, while more than half say they "skim through" the magazine each month.
- Some major concerns among the CMS members who responded to the survey are:

- ▶ Federal government interference and encroachment into the medical practice field
- ▶ "Third-party" interference
- ▶ Rising health care costs and rising costs in general
- ▶ Physician surplus

The survey is now being refined for distribution to a broader cross-section of CMS membership, in an attempt to pinpoint specific private practice needs. Jerry Bowman stated that within the next 60 to 90 days a questionnaire will be sent to a *statistically valid* sampling of the total membership. He urged all members receiving this survey to respond as quickly and as thoroughly as possible, assuring CMS membership that the survey results were strictly for CMS use, and "doctors should not fear misuse of personal information or opinion."

## Grievance of the Month

Mrs. A. wrote a rambling, loosely-worded grievance to the Grievance Committee of the Colorado Medical Society against Dr. X., stating he had caused her considerable expense and pain by failing to find the "poison" which was causing her continued abdominal pain and some diarrhea. She felt this poison was somehow placed in her house. He had ordered an X-ray of her bowel and a scoping, which had not cured her problem and, in fact, caused her more pain. She wouldn't go back to him and hadn't paid her bill.

**Investigation:** The grievance was forwarded to the local grievance committee for them to handle. Dr. X. wrote back a comprehensive medical report with presumptive diagnosis of Irritable Bowel Syndrome. Tests ordered were to substantiate that diagnosis. Findings on sigmoidoscope supported diagnosis of Irritable Bowel Syndrome. Dr. X. further reported finding out from family that Mrs. A. had a series of hospitalizations for paranoid schizophrenia in the past.

**Recommendation:** That Dr. X. call Mrs. A. and try to get her into the office and help her see how emotions can cause these kinds of symptoms and get her back into psychiatric care. Patient was reassured that the investigation done by Dr. X. was proper and medically indicated and that she could communicate further with him.

## Final Medicare Regulations for Provider-based Physicians

On October 1, 1982, the Health Care Financing Administration (HCFA) published proposed regulations governing reimbursement of provider-based physicians (i.e., physicians who are compensated

**This publication  
is available  
in microform.**

**University Microfilms  
International**

300 North Zeeb Road  
Dept. P.R.  
Ann Arbor, Mi. 48106

30-32 Mortimer Street  
Dept. P.R.  
London W1N 7RA  
England

directly by a hospital, skilled nursing facility, or comprehensive outpatient rehabilitation facility). The regulations were proposed in order to implement Section 108 of the Tax Equity and Fiscal Responsibility Act (TEFRA) of 1982.

Section 108 directs the Secretary of Health and Human Services (HHS) to develop rules that distinguish between medical services that are furnished to individual patients and contribute to the patient's diagnosis or treatment (and are reimbursable under Medicare Part B as "reasonable charges"), and those services which benefit the hospital's patients generally (which will be reimbursed under Part A as "reasonable costs").

In response to the more than 3,500 substantive comments which HCFA received concerning the regulations, the original implementation date was delayed.

A revised set of regulations has now been published in the March 2, 1983 *Federal Register*, with an effective date of May 3, 1983. The deadline for comments on the proposed rules is April 1, 1983.

The major revisions in the new regulations are as follows:

- (1) The final regulations will not apply the Reasonable Compensation Equivalent (RCE) limits to Medicare Part B reasonable charge payments for physician services to patients; the RCEs will only be applied to Medicare Part A services.
- (2) The final regulations will permit Part B reasonable charge payments to be made for up to four (instead of two) concurrent anesthesia procedures.
- (3) The criteria for a physician to be reimbursed on a reasonable charge basis have been changed by deleting the requirement that such services not be "frequently and consistently furnished by a non-physician."
- (4) Consideration is being given to eliminating combined billing for hospital and physician services.
- (5) The methodology for computing the reasonable cost equivalents (RCEs) has been refined, and adjustments to the RCE limits to account for the costs of malpractice insurance, and continuing medical

education, will be allowed.

HCFA is requesting that comments not address issues to which they have already responded, and is specifically soliciting comments on the proposal to eliminate combined billing, and any "new" issues.

## AAMA To Sponsor Educational Seminar

The American Association of Medical Assistants, Inc. (AAMA), Colorado Society, Capitol Chapter, is sponsoring an educational seminar for medical personnel. The seminar will take place Saturday, April 30, 1983 from 8:30 a.m. to 4:30 p.m. at the University of Colorado Health Sciences Center, Room 3829 in the medical school.

Topics will be "Collections: Patient Accounts You — Pay, conducted by Michael Yont, Market Manager, PAYCO and "Medicare /Blue Shield Updates," conducted by Jan McCusker, RN, Physician Service Representative from Blue Shield.

Fees are \$25.00 for members and students, \$45.00 for non-members. .6 CEU credit has been applied for.

Registration deadline is April 27, 1983. For more information, contact Linda McCarty, 232-5745 or 420-1344, or Bonnie M. Bruntz, 761-2870 or 761-8834.

## CMS Files Grievance Against Rocky Mountain News

On March 11, 1983, Colorado Medical Society President Merlin G. Otteman, MD filed a formal grievance with the Colorado Code of Cooperation and against the Rocky Mountain News for articles "published on two consecutive days, February 27, 1983 and February 28, 1983, which the Colorado Medical Society feels were irresponsibly written, unfairly biased, and which may have caused irreparable harm to the individuals and community that were the subjects of said articles."

Dr. Otteman's grievance refers to articles presenting, in detail, the medical qualifications of Gerald E. Puls, MD, and a dispute with the Rangely District Hospital. Dr. Otteman pointed out that the articles contained "excerpts from a **highly confidential** report" prepared by CMS at the request of the hospital's board of directors. The grievance also states that subsequent information received by CMS that publication of the articles "will **seriously impede** the Board of Medical Examiners in its investigation into the charges against Dr. Puls."

The Colorado Code of Cooperation Committee, through its established grievance procedure, will investigate details of the grievance and the response by the Rocky Mountain News to determine if this matter should go to a full hearing before the committee.

The Colorado Code of Cooperation Committee is made up of representatives from all news media, hospitals, both private and public and physician members of the Colorado Medical Society, representatives of the Colorado Broadcasters Association, the Colorado Press Association and the Radio-Television News Directors Association.

## 1983 President's Planning Session and Leadership Conference

This year's President's Planning Session and Leadership Conference is scheduled for Saturday, June 4. Component society presidents, specialty society presidents as well as other physicians in leadership positions will, by invitation, be asked to participate in setting the CMS programs/projects. Between now and the scheduled meeting, if you have an issue of concern which you would like to be brought before the medical society or should you have an opinion about the focus for CMS in 1984, please contact your component or specialty society president and urge him or her to attend carrying your issues.

First Interstate Bank  
of Denver's Health  
Care Professionals'

Banking Program specializes in personalized, comprehensive service for those in the field who practice or are in administration. We realize that in banking, like medicine, there's a world of difference between a simple answer and a simplistic one. You need more than a pat response to your banking questions. First Interstate has the people and the resources to provide you with a complete array of financial services, including innovative trust plans, facilities financing and investment programs. And, we offer all these services with personal attention and meetings scheduled for your convenience—at your office or ours.

You'll work directly  
with a professional  
banker who is able to

help you develop a customized financial plan for you or your employees. Our integrated team approach means you'll receive efficient, accurate responses to your questions. In addition, because we're part of an eleven western state banking network, you'll enjoy personal attention and have the resources of First Interstate Bancorp, the eighth largest banking system in the nation, behind you.

To find out how you can benefit from First Interstate's Health Care Professionals' program, contact Shirley Good, Assistant Vice President, Health Care Banking Department at 572-1776.

## Winds of Change

"Four score and seven years ago, our Fathers brought forth on this continent, a new nation, conceived in Liberty, and dedicated to the proposition that all men are created equal." Abraham Lincoln delivered these immortal words to a troubled nation almost 120 years ago. Profound changes had enveloped the country, times were uncertain and relationships would never be the same again. American medicine now faces similar uncertainties. The winds of change are blowing sharply upon us. The greatest health care delivery system that the world has ever known, is now experiencing forces from business, government, labor consumers and also providers to change. These forces are rooted primarily in economics as our nation finds that it cannot afford the system that it has created.

However, it is also causing those both in and outside the health care system, to re-evaluate traditional roles, relationships and goals. Where will the changes lead us? I propose to you that we not be led! I recommend to you that we recognize these forces as legitimate concerns of the people of our nation and respond to them by becoming leaders in this medical metamorphosis. We are experts in the delivery of health care and we must see that this expertise is effectively utilized in the development of any changes in the present system. The elements of quality and access must not be sacrificed to the force of cost. Any alterations in our present system must answer present day problems but not compromise those

aspect which have made it great!

How can we answer this challenge? We can answer it by becoming aware of the problems, making a commitment to do something about them, taking the initiative directing change and making certain the foundation from which we obtain our strength is ongoing and solid! This foundation is our medical society. I would like to elaborate a bit on areas which will increase the strength of our foundation.

### Membership

Basic to our organization is the member, the interested and active member. We are impotent without him or her. Therefore, we must establish a membership committee whose mission is to garner and retain this type of member through a vigorous recruitment and retention program which offers solutions to current problems making our society relative to his/her needs.

### Leadership

The present effectiveness and future success of our organization depends on dynamic leadership. We may have many such physicians in our society. You are one of them. An environment is being developed that will encourage them to continue their participation and commit their experience and energies to the goals and projects of the society. One of the first thrusts in this direction is to change the Spring *President's Planning Session* to the *President's Planning Session and Leadership Conference*. Another, which is presented to you at this Interim Meeting, is to elect the Nominating Committee earlier in the administrative year and direct the committee

members to actively seek candidates who will strengthen our society and fulfill its needs.

### Long Range Planning

Too often policy and plans develop as an answer to sudden and unexpected pressures. As a result, they are reactive measures and therefore are frequently short-lived. Resources may be unnecessarily spent in this fashion. A *Long Range Planning Committee* will be proposed which will address our and our patients' long-term needs, avoiding short-term crisis situations and which will interface with the Health Policy Agenda being established by the AMA and participating organizations.

### Financial Base

An organization whose operations and projects are largely dependent upon dues from its members is extremely limited and vulnerable. We must develop other reserve sources over and above dues. The AMA, in 1974, had almost "0" liquid assets and was borrowing one million dollars per month to meet its payroll. The problem was addressed and in 1982, operating reserve was \$94.3 million dollars of which over 50 percent was non-dues income. We must attack our problem and the appropriate committees will be so directed.

From a firm foundation we can pursue our goal of seizing the initiative, becoming leaders in the medical metamorphosis in order that the background and expertise of the practicing physician will become the framework from which these changes are made. Ingenuity and ex-

perience will assist us in this task of preserving the present pluralistic health care delivery system and the private enterprise practices of medicine. We must also respond with a system that does not neglect the health requirements of the citizens of this state and nation, continues the growth of technology but presents reasonable, final price. Not an easy task! However, working with other providers, government, third-party payors, business and consumers, we must and will succeed in our efforts to direct change into the proper mode. The alternative is unacceptable.

We will lead in the effort to respond to the forces of change by consideration and then implementation of appropriate measures of cost containment within our purview. We will go beyond these measures and consider their impact upon former and future relationships by scheduling a forum for hospital staffs and hospital administrators at the President's Planning Session and Leadership Conference. A section for hospital staffs will be established in our state society as the relationship between hospital staffs, administrators and board of directors becomes extremely important for an efficient health system as the winds blow. The individual practitioner will not be forgotten in this age of HMOs, IPAs and PPOs; his/her issues will also be addressed at the June meeting and an ad hoc committee will be established to study the status, influences and direction present forces are taking the individual practitioner. Input from government, business, labor, third-party payors and consumers will be solicited. In this fashion our leaders will be informed and given suggestions as well as solutions to the forces of change.

The "Winds of Change" are upon us. It will require a unified effort from us all to direct these forces appropriately. It demands the force of your commitment, the force of your involvement, and the force of your conviction to see this effort through to a constructive conclusion for all. May His force be with us so that we may go forward together to make even better the greatest health care system the world has ever known.

# Close your eyes. Now have someone read this to you.

You are blind. A student. Facing four years of college. With about thirty-two textbooks to read. Plus fifty supplemental texts. How are you going to manage?

With Recording for the Blind. Since 1951, we've helped over 53,000 blind, perceptually and physically handicapped students get through school. By sending them recordings of the books they need to read. Free.

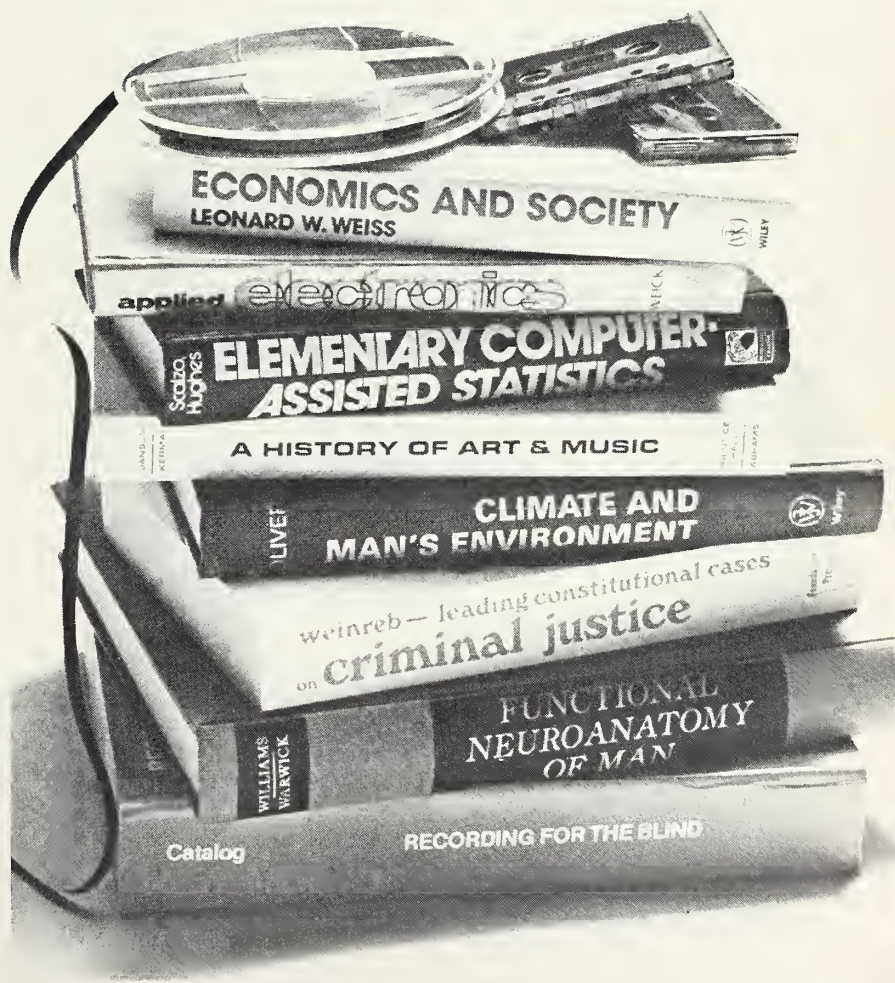

Recording for the Blind is non-profit, and supported by volunteers and contributions from people like you who can imagine what it's like to be blind.

Your tax-deductible donation will help our students meet their educational goals. We'd all be grateful.

Joseph L. Kovarik, MD  
CMS delegate to the American Medical Association

*The AMA Update is a series of editorial columns written at the request of the Colorado Medical Society by the CMS delegates to the AMA. The articles represent the opinions of the authors and do not necessarily reflect the official viewpoints of CMS or AMA.*

## AMA Vs. the American College of Surgeons?

Since the American College of Surgeons (ACS) withdrew its delegate to the AMA two years ago, a number of questions of interest not only to the surgeons who are Fellows of the ACS, but also to our non-surgical colleagues, prompt me to offer the following remarks concerning the relationship of these two organizations. These remarks stem

from my perspective of serving on the Board of Governors of the American College of Surgeons and as one of your Colorado Delegates to the AMA.

There are distinct differences between the two organizations and many of us feel that their functions are complementary rather than competitive. The decision to

withdraw the ACS delegate from the AMA was announced by the ACS Board of Regents with the explanation that the Board of Trustees of the AMA was the legal spokesman for that organization and thus for any component or constituent body. The regents felt that the College of Surgeons should not and could not have another group speaking for them. It is interesting that none of the other specialty organizations have followed the lead of the ACS by withdrawing their delegates to the AMA. This casts some doubt on the validity of the reason the ACS regents used to support their action.

There are two main issues in recent years on which the college disagreed with the position of the AMA, namely the revision of the Principles of Medical Ethics and the "softening" in the AMA stance toward chiropractors. Part of the reason for revision of the AMA Principles of Medical Ethics was that the Federal Trade Commission (FTC) and other governmental agencies were threatening to sue the AMA for restraint of trade because of the AMA's proscription against advertising. Recently the American Bar Association and the American Dental Association have been under similar scrutiny.

As far as the chiropractors are concerned, there would be no problem if they were not legally licensed in every state of the union. Since they are licensed practitioners, they have initiated suits in various parts of the country against the AMA and other organizations pleading discrimination and restraint of trade. The result

## NAVY NURSING: 2 CAREERS IN 1!

19th and California St.  
Denver, CO 80202

**NAVY NURSE.**  
**IT'S NOT JUST A JOB, IT'S AN ADVENTURE.**

is that the AMA can no longer require its members to avoid association with chiropractors, but have left this issue up to each of us individually.

The fact that the American College of Surgeons was not threatened with a multi-million dollar lawsuit while the AMA was, may have some bearing on this matter. Despite these two areas of disagreement, there are many other areas where the ACS and the AMA have cooperated throughout the years, including participation in the JCAH, graduate medical education and continuing medical education. The ACS is an integral participant in the AMA's current development of a Health Policy Agenda for the American people. The ACS is becoming more involved in the socio-economic and political arena and has initiated a "Key Man Program" in Washington, D.C.

However, the college has elected not to hire its own lobbyist because it has access to the very excellent and efficient lobbyists of the AMA. Even after the ACS decision to withdraw its delegate to the AMA, each governor of the ACS continued to receive a copy of the weekly AMA newsletter mailed by the college.

When the resolution concerning the ACS withdrawal of its delegate was introduced at the AMA House of Delegates, it was not accepted. The House directed the AMA Board of Trustees to hold the delegate seat open in case the ACS should change its mind in the future. The House also specifically directed the AMA Board of Trustees to work with the ACS Board of Regents to resolve any known or potential problems.

Of the more than 240 AMA delegates at that time, 135 were also Fellows of the American College of Surgeons. Almost every one signed a petition to the college asking the regents to reconsider their action. Five of us in the AMA House, as either delegates or alternate delegates, were also governors of the ACS. We subsequently submitted a resolution at the American College of Surgeons Clinical Congress meeting in October 1981 asking the Board of Regents to reconsider this action. The resolution passed by a majority vote of the governors and was subsequently submitted to the Board of Regents who reaffirmed their original stand.

I might point out that the ACS is an organization run by the directors and 19 regents, while the Board of Governors acts in an advisory capacity only. This makes for an efficient, but not necessarily democratic, organization. On the other hand, the AMA is structured so that the House of Delegates is the policy-making body and the Board of Trustees is charged with implement-

**"There are distinct differences between the two organizations and many of us feel that their functions are complementary rather than competitive."**

ing such policies. This is the basic organizational difference between the two organizations.

The AMA's areas of involvement naturally are far broader than those of the ACS. This is the main reason why many of us feel that our support of both organizations is necessary and desirable. The chief of surgery at a university medical center has pointed out that the disagreements between the ACS and the AMA are

like watching your mother and father argue. You love them both, can see that neither one is wholly in the right on all issues, but sincerely hope that they can reconcile their differences for the good of all.

The following quotes from Dr. John M. Beal, President of the American College of Surgeons, are pertinent. "We are united with the AMA in our concern about the assaults on fee-for-service medicine and its potential adverse effect on quality." "I think the AMA's program to develop a health policy planning document is an exciting idea, and the college will be working closely with the AMA and other groups to help develop the policy. And of course, the AMA's Washington office remains the 'gold standard' by which other medical lobbying efforts are measured. It is an asset to all of us."

The goals of both organizations, regardless of their political differences, are the maintenance and improvement of quality professional care for the patients we serve, by promoting high standards of education and performance of their members.

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

# DOCS

DOCTORS OFFICE COMPUTER SYSTEMS

## DOCS WORKS FOR YOU, YOUR STAFF, YOUR PATIENTS.

DOCS is a computer system that has been designed to meet the needs of Medical and Dental professionals. Installing a computer programmed with DOCS means that your practice runs more economically. Fewer mistakes are made. You and your staff waste less time on tedious paper work. The result? Increased return on receivables, improved practice information, fewer delinquent accounts. And that's just the beginning.

Because the computer takes care of menial paper work, your staff has time for more important duties, and you have more time for your patients. DOCS is simple for your staff to use. The computer asks a question; your office person enters the answer. DOCS will question invalid numbers, process insurance forms, and prepare billing, just to mention a few functions. Your patients benefit, too. Patients are registered more quickly, their records are immediately available without searching for files, and accounts are kept up-to-date. DOCS does all this and much more.

### THE DOCS SYSTEM PROVIDES:

- ☐ Patient Inquiry
- ☐ Charge and Payment Entries
- ☐ Patient Super Bills
- ☐ Universal Claim Forms
- ☐ Blue-Shield — Champus • Medicare - Medicaid
- ☐ Detailed Aging Reports
- ☐ Selective Aging Reports
- ☐ Labels
- ☐ Collection Letters
- ☐ Alphabetical Computer Look-Up
- ☐ Practice Analysis
- ☐ Cycle Billing
- ☐ Audit Trails
- ☐ General Ledger
- ☐ Word Processing
- ☐ Tax Benefits;  
Investment Tax Credit  
Depreciation

☆☆☆ NOW AT A NEW LOCATION ☆☆☆

## DOCS

3120 S. WADSWORTH BLVD., SUITE 1, DENVER, COLORADO 80227  
(303) 979-1106

- ☐ Please send me more information on the DOCS System.
- ☐ Please phone me to schedule a system demonstration.

## Current Status of State Legislation

Looking forward to the upcoming second "annual" CMS trip to Washington, D.C., April 20-23, your Government Affairs Division reports the current status of state legislation.

It has been an interesting but frustrating year thus far in the state legislature. The mindset of the health committees in the Senate and House has become very different — the Senate committee is very pro-physician; the House is very anti-physician. Thus health bills that survive the legislative process through both houses are destined for final action by conference committees. Often conference committee work in May is yawnable, but this year it will determine the outcome of much of physician-oriented legislation.

Proposed legislative bills include the usual requests by other providers — chiropractors, optometrists, podiatrists, opticians, respiratory therapists, lay midwives, physician assistants, etc. Some we have monitored, some we have actively opposed. The turf battles are ongoing, and physicians are the only group that appear to be the "bad guys" in each battle of certification, licensure, or other form of recognition under Colorado law.

Another group of bills seems to address those who can't command their own destinies. A large number of bills address tightening of child abuse and child molestation laws, and others address disabled adult abuse, automobile restraint systems for children under four years of age, living wills and graceful death (this bill already terminated in a House committee). The current legislature doesn't approve of governmental in-

tervention; but ironically most of the tough child abuse bills are moving rapidly, and the child restraint system bill has its first chance of passage in the three times it has been introduced.

Insurance bills that have been offered address prompt payment to physicians by insurance carriers and put certain controls on the COPIC, the insurance trust created by CMS for its members. These bills are being monitored closely and hopefully amended when necessary as they

progress through the legislature.

A bill to repeal Certificate of Need, and a bill to restore the hospital rate review commission are opposite attempts to look at the control of health care costs. Those costs are of major interest to the governor, to our former allies, and to the legislators both as representatives of a constituency and as individuals. The loss of personal loyalty to physicians is evident.

It is a difficult but interesting year for medicine in Colorado, only reflecting the national scene. May you be successful!

## Emergency! First Aid

**Condition:** Fading professional relationship between health care providers, industry, physicians and third-party-payers.

**Symptoms:** Marked increase in hospital days; lack of physician in-office treatment of ambulatory patients; overall weakening of the maintenance of health care standards.

**First Aid Remedy:** Colorado Foundation for Medical Care... your most effective tool in medical cost efficiency, peer review, third-party payer relations.

CFMC is one of the most successful medical foundations in the U.S., working for you!

For detailed information and a personal consultation, complete the following form and mail immediately to CMS, 6825 East Tennessee, Bldg. 2, Suite 500, Denver, Colorado 80224.

# New, CMS-sponsored "No-limit" Approach to Practice Overhead Expense Insurance

by William Blair Smith and Michael J. Prostrullo

## CMS Announces New Membership Insurance Plan

Health  
Hospital  
Practice  
Overhead  
Disability  
Estate Planning  
Return of Dues

This is the first of a series of articles in Colorado Medicine detailing the specifics of an entirely new personal and business insurance plan available to CMS members. Messrs. William Smith and Michael Prostrullo are the authorized benefit consultants for the Colorado Medical Society program and, as such, will be providing monthly updates and information on this program.

Though the program has been a long time in the development, the lengthy research and planning will now produce positive, cost-saving results as another CMS member service. If you wish immediate information concerning elements of this new insurance program, contact the CMS member services office, 321-8590, or write to CMS, Office of Member Services, 6825 East Tennessee, Building 2, Suite 500, Denver, Colorado 80224.

Bold, new and innovative methods of financial underwriting have produced a "no limit" approach to issue and participation amounts of practice overhead expense insurance that may be secured by members of the Colorado Medical Society.

Significance of this approach becomes apparent when we consider the financial damage that a long-term disability (one lasting longer than ninety days) can do to a physician. Statistics show that approximately one-third of the professional's gross income is "plowed back" into the practice to cover fixed expenses. Should a physician suffer a long-term disability, the daily bills of the practice such as office or building rent, mortgage payments, utility bills, equipment leasing costs, employees' salaries, malpractice insurance premiums, etc., must be paid. Without insurance to cover these costs, the professional owner would either have to:

- (1) Use up personal savings and investments.
- (2) Take out a loan (but who would loan money to a disabled individual?).
- (3) Use personal disability income payments, thus reducing the amount available to the family.
- (4) Liquidate the practice.

The alternatives to an insured plan are frightening, yet the solution is easy and highly affordable. A separate type of policy, business overhead expense, should be used to protect the continuance of the practice. It makes sense to own this type of protection, so that when you are able to go back to your practice, you will have a practice to which

you can go back.

Regardless of age, almost one out of every two physicians will be disabled prior to the age of 65 with a disability lasting longer than 90 days. The probability of at least one long-term disability occurring prior to age 65 for a 30-year-old is 52 percent, for a 40-year-old, 48 percent, and for a 50-year-old, 40 percent.

While there are many fine products in the market place today, a contract for a physician should satisfy the following criteria:

- (1) It should contain not only total disability coverage, but partial as well.
- (2) It must have a "your occupation," "regular occupation," or "his occupation" definition for total disability.
- (3) It must be "open-ended" allowing payments to extend beyond stated benefit period.
- (4) It should have a guaranteed insurability option allowing you to purchase more insurance regardless of your health in the future.
- (5) It must allow sufficient indemnity. It does not help you if your monthly expenses are \$12,000.00 or \$18,000.00 and the maximum coverage you can receive is \$6,000.00 or \$7,000.00 per month. By applying the above criteria to any business overhead expense policy, you can judge its relative worth very quickly.

The new Colorado Medical Society Plan measures up very well against the five important points.

Partial Disability Coverage — one-half of the covered monthly expense benefit is paid, if the insured is only partially disabled and unable to perform some of the key functions of his

or her occupation, for a maximum of three months.

Total Disability means because of injury or sickness:

- (1) You are under the regular and personal care of a physician; and
- (2) You are completely unable to perform the important duties of your regular occupation.

Our contract is open-ended in that we have a 15-month benefit period and an extension of benefits provision whereby if you are continuously totally disabled beyond 15 months, and have not received benefits equal to 15 times the amount for which you are insured,

you will continue to be eligible for benefits up to an additional nine months.

Guaranteed future purchase options allow member physicians, depending on age, to purchase increased monthly benefit of between \$100.00 and \$500.00 every two years. In addition, on the first option date a double option may be exercised.

And last, but perhaps most important, we now have a "no limit" approach to the amount of practice overhead protection that will be issued.

Premiums paid for a Business Overhead Expense plan are fully tax

deductible.\* Although the insurance proceeds must be reported as income, the professional can still deduct most of the corresponding business expenses from his or her income taxes, thus almost offsetting the policy benefits with expenses. To determine how these tax rulings relate to you, we suggest you secure tax and legal counsel.

Most physicians own a large amount of disability income insurance. With rapidly escalating incomes and increasing practice expense, we recommend that a physician review his or her plan yearly.

Premium Payer	Benefits Payable to	Policy Owner	Tax Results	
			Premiums	Benefits
Business	Sole Proprietor	Sole Proprietor	Deductible (REV. RUL. 55-264, 1955-1 C.B. 11)	Reportable as Income* (REV. RUL 55-265, 1955-1 C.B. 11)
Partnership	Partnership	Partnership		
Corporation	Corporation	Corporation		

\* Although the benefits are taxable as income, the actual business expenses are deductible.

\* See above paragraph.

# Highlights of the Interim Meeting of the CMS House of Delegates

March 5-6, 1983, held at the University of Colorado School of Medicine and University of Colorado Health Sciences Center

## Organizational

- Elected the following members to the CMS Nominating Committee:

### **District No. 1**

Peter Standard

### **District No. 2:**

Nancy Nelson — Denver

Mark Rubright — Boulder

Robert Carver — Arapahoe

Lynwood Hopple — Aurora-Adams

Dean Sadler — Clear Creek Valley

### **District No. 3:**

David Martz

### **District No. 4:**

Wesley Boucher

### **District No. 5:**

Telford Davis

- Received a verbal report from Joseph Poynter, MD, Chairman of the CMS Building Committee, in which he discussed the building and land partnerships. It is anticipated that these partnerships will raise approximately \$6 million to help finance the new building.

- Received a verbal report and slide show from K. Mason Howard, MD, Chairman of the COPIC Board of Trustees. Dr. Howard discussed some of the plans for COPIC, including the Preferred Risk Plan, "mini-trust" option for group practices and the hiring of a CEO for the organization.

- Received a verbal report from Sharon Ritzman, President of the CMS Auxiliary. Mrs. Ritzman remarked upon the importance for member spouses of joining the auxiliary. She described some of the new projects of the auxiliary, particularly two new support groups which have been established for physician spouses.

- Received a verbal report from a representative of the CMS Student Medical Society, Harlan Ribnik. Mr. Ribnik discussed the financial needs facing medical students at the University of Colorado. He noted that the school is soliciting support from CMS physician members for two projects to aid the students, the Student Centennial Loan Fund and the Medical Student Employment Referral Service.

- Received verbal reports from two guest speakers, M. Roy Schwarz, MD, Dean of the Medical School and Frank Traylor, MD, Executive Director of the Department of Health. Dr. Traylor mentioned that

## Actions Taken at the Judicial Council Meeting March 5, 1983

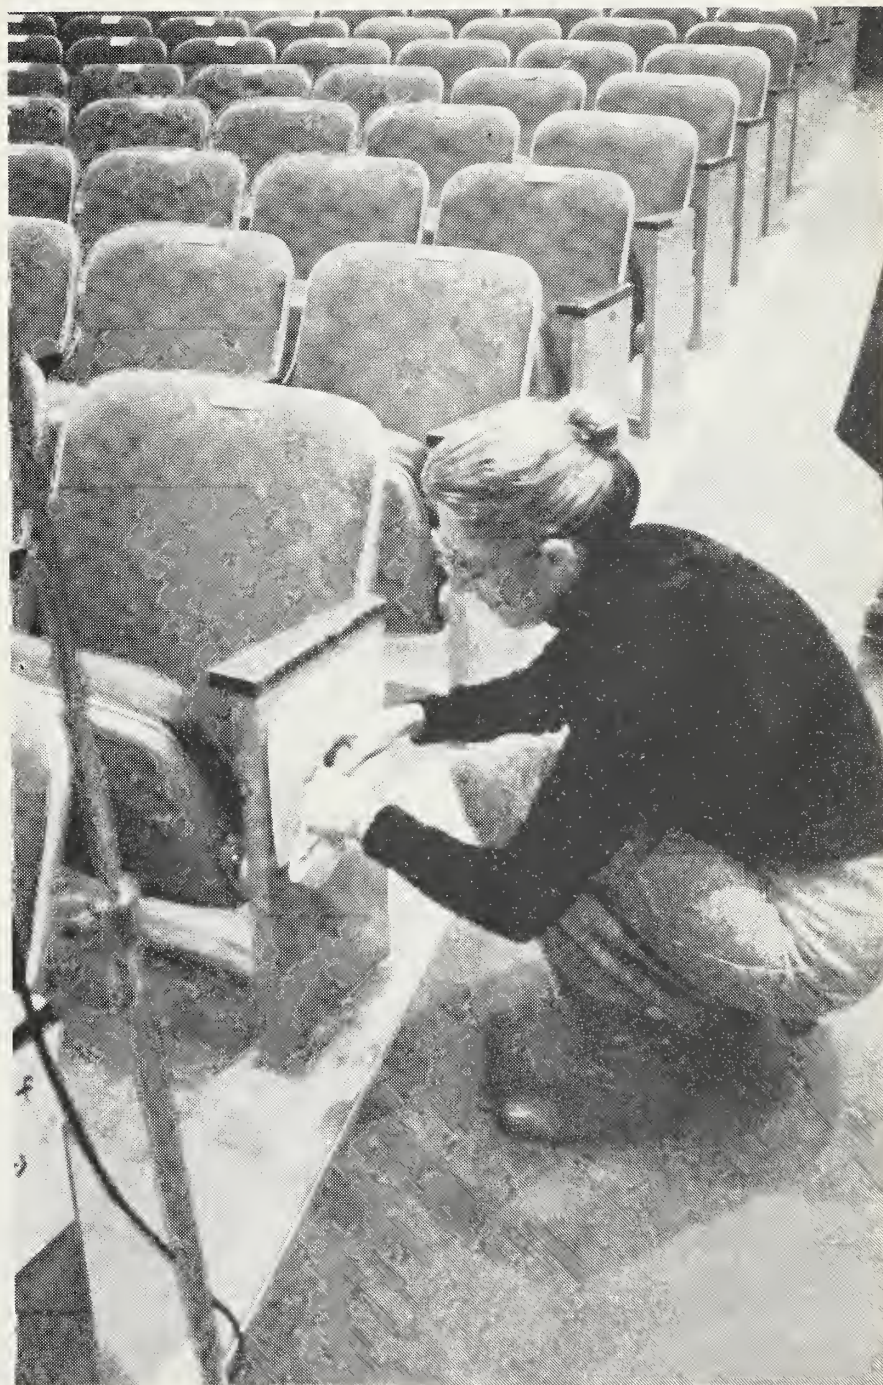

- Reaffirmed the definition of physician adopted by the AMA at the 1972 Annual Meeting and reaffirmed at the 1982 Interim Meeting, as follows:

"A physician is a person who, having been regularly admitted to a medical school, duly recognized in the country in which it is located, and has successfully completed the prescribed course of studies in medicine and has acquired the requisite qualifications to be legally licensed to practice medicine."

- Adopted the AMA opinion on the ethical responsibilities of physicians regarding abuse of children, elderly persons and others at risk. The opinion states in part:

"The physician who fails to comply with the laws requiring reporting of suspected cases of abuse of children and elderly persons and others at risk can expect that the victims could receive more severe abuse that could result in permanent bodily or brain injury or even death."

- Agreed that the issues involved in Yellow Pages specialty listings are beyond control of the profession and are no longer to be items for Judicial Council agenda.

he has resigned his position to be full-time Executive Director of the Department of Institutions.

- Approved the filing of the address of Merlin G. Otteman, MD, CMS President. Dr. Otteman summarized some of the major activities of the society and issues to be faced, including health care cost containment.

- Approved filing of the address of John A. Whitesel, MD, CMS President-elect. Dr. Whitesel discussed the "winds of change" facing the society and areas of importance to the strength and stability of CMS, including membership,

leadership, long range planning and development of a strong financial base for the society. (For full text of his speech, see "View From My Corner" in this issue.)

- Approved the COPIC Annual Report.
- Approved the progress report and supplemental reports of the CMS Board of Directors.
- Approved filing of the Judicial Council report. Actions taken by the council appear on p. 111.
- Approved the progress report and supplemental report of the Executive Vice President.
- Approved the summarized audited financial report.
- Approved the progress report of the Grievance Committee.
- Approved the report of the 1982 AMA Interim Meeting.
- Adopted a resolution thanking University of Colorado School of Medicine and University of Colorado Health Sciences Center for hosting the CMS Interim Meeting.
- Adopted a resolution that

unaudited financial information be made available at the Annual Meetings and audited financial information at the Interim Meetings.

- Adopted a resolution to amend the 1981 bylaws regarding Active Members Emeritus Annual as follows: "An active member may be reclassified Active Member Emeritus — Annual if a temporary financial hardship reduces his practice or occupation to less than half time. This temporary financial hardship may result from physical disability, major illness or personal catastrophe. Reclassification will be made by the Board of Directors upon recommendation of the Component Society and will be reviewed annually by the Component Society. Active Members Emeritus-Annual shall enjoy all the rights and privileges of membership, including the right to vote and hold office."

- Adopted a resolution to amend the 1981 bylaws regarding nominating procedures; that the Nominating Committee "be elected during each Annual Meeting and shall hold an open forum at each Interim Meeting to hear prospective

nominees. The Nominating Committee shall actively solicit recommendations from the Component Societies for all elected positions before each Interim Meeting."

### **Legislation**

- Approved the progress report of the Council on Legislation.
- Approved the COMPAC report, with the note that "all CMS members should seriously consider becoming members of COMPAC."

### **Public Health**

- Approved the progress report of the Council on Public Health.
- Approved the supplemental report on the School Health Nursing Services in Colorado.
- Approved the supplemental report on Preferred Risk Management for Non-smokers.
- Adopted a resolution to ask Congress to address the issue of asbestos-related illnesses and to ask the AMA to do the same.

### **Professional Education**

- Approved the progress report of

## Highlights of the Meeting of the Board of Directors, March 4, 1983

- Approved preliminary summary of Offerings of both Colorado Medical Land Partnership, Ltd. and Colorado Medical Building Partnership, Ltd. subject to final approval after more detailed information is made available to the Board.

- Elected Larry J. Thrower as a lay member of the COPIC Board.

- Approved new COPIC Trust Agreement.

- Approved election process for COPIC Board and initial three-year term for Board members.

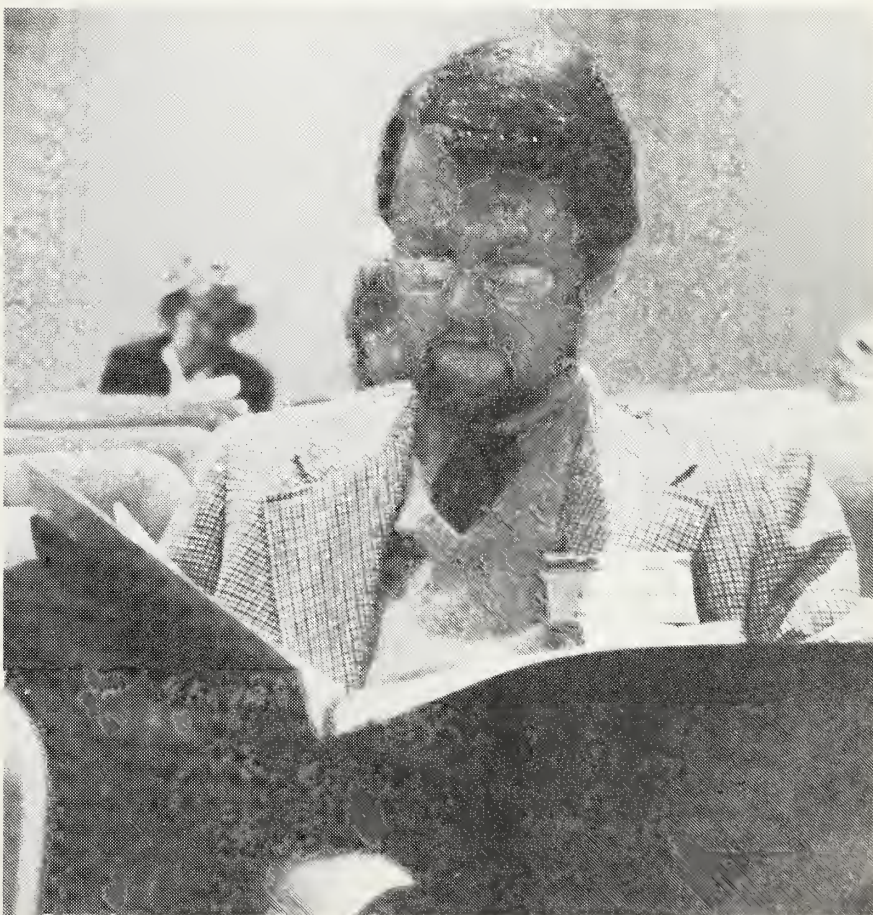

- Approved program and administrative budget cuts in an effort to maintain a balanced budget.

- Approved committee appointments:

Pre-Admission Hospital Physician Advisory Committee — Charles Goldstein;

Medicaid Formulary Committee — Thomas Parry

Insurance Benefit Committee — Theodore Sadler, Chairman; Ross Brechner, Charlie Rawlins and Mrs. Caroline Creswell, pending approval of the Colorado Medical Society Auxiliary.

the Council on Professional Education.

- Adopted a resolution to appropriate sufficient funds (approximately \$2,000) to support one University of Colorado medical student for three months for the 1983 summer Student Clinical Research Program.

- Adopted a resolution to support and encourage "all physicians to participate in continuing medical education on a voluntary basis" and to oppose "a statutory mandate for physicians to fulfill this professional obligation as a prerequisite for license renewal."

### **Professional Relations and Medical Service**

- Approved the progress report of the Council on Professional Relations and Medical Service and an addendum regarding "Proposed Guidelines for Prescription of Controlled Substances, Schedule II, for Treatment of Pain."

- Adopted a resolution that the Colorado Medical Society opposes the changes in the recently revised Accreditation Standards published by the JCAH to change the name of hospital "medical staffs" to "organized staff," which would allow licensed non-physicians to become part of the medical staff.

Under this resolution, CMS also opposes the changes in the January 4th Federal Register, which proposes to change the definition of "physician" under Medicare to include podiatrists and chiropractors. CMS will also submit a resolution to the AMA House of Delegates opposing the JCAH changes. The society will write to the JCAH, in support of the AMA, to request a deferral of action on the revisions "to allow full and open discussion by the AMA House of Delegates at its Annual Meeting in June."

- Adopted a substitute resolution that CMS oppose any action to legalize any practice of midwifery other than by licensed nurse midwives.

- Adopted a substitute resolution

that members be made aware of the existence of the Patient Medication Instruction Program of the AMA.

### **Socio-Economics**

- Approved the progress report of the Council on Socio-Economics.

- Approved the filing of the Cost Containment Report and the Cost Containment Minority Report.

- Referred Addendum No. 1 of the Cost Containment Report, "Colorado Medicaid Primary Care Physician Program" to the Council on Socio-Economics "for development of a plan to advise physicians of the program's implications for them, to monitor its implementation and to report these findings at the Annual Meeting."

- Adopted a resolution regarding cost containment, with a number of amendments; that "The Colorado Medical Society consider the following concepts potential cost-savings mechanisms insofar as they either promote, uphold or do not compromise the quality of care."

In a summarized form, these concepts are:

1. Utilization review;
2. Case management;
3. Ambulatory surgery under certain circumstances, e.g. elective procedures;
4. Alternative delivery systems, "when made available as an element of a pluralistic medical delivery system which includes traditional fee-for-service medicine;"

5. Physician education;
6. Risk sharing, under specific circumstances;
7. Exploration of the "possibility of expanding benefits for care in alternative settings for terminal and convalescent patients;"
8. "Recipient cost-sharing (co-payments and deductibles) under circumstances of private insurance."

The House further resolved "that the Colorado Medical Society oppose implementation of the following measures until they have demonstrated effectiveness in reducing costs and potential for upholding medical care."

In summary, these measures are:

1. Retrospective denial of reimbursement "when it has no connection with standards of care...;"
2. Mandatory second opinion programs, "since the evidence does not support its effectiveness in reducing costs or maintaining quality;"
3. Retroactive recall of reimbursement under circumstances where "neither the physician nor patient (where appropriate) had been notified at the time of payment that the specific services had been referred for review."

Finally, the House resolved that CMS take no position on recipient cost-sharing by indigent patients.

- Adopted a resolution directing the CMS delegation to the AMA to introduce a resolution for the AMA to endeavor to "induce Medicare and its fiscal intermediaries to adopt the AMA Current Procedural Terminology, 4th Edition, with all current and subsequent revisions."

### **Foundation**

- Received two verbal reports, from Frederick A. Lewis, Jr., MD, President of the Board of Directors of CFMC, and Kenneth A. Platt, MD, Medical Director of CFMC, regarding some of the issues facing the Foundation. These issues included the relationship between CFMC and CMS, the addressing of regional and local needs by the Foundation and the dissemination of information by the Foundation.

- Approved the progress report of the Colorado Foundation for Medical Care.

Photos by Phil Stietenroth, UCHSC

# Delegate Attendance — 1983 Interim Meeting

## District I — 19 Delegates

### Larimer — 8 Delegates

(D) Merkel, Lawrence A. (1,2)

# Edward Jackson

by James J. Delaney, Jr., MD, Historian, Colorado Medical Society

***This feature is presented monthly in Colorado Medicine and prepared by the CMS Historian, Dr. James Delaney. The format alternates between a contemporary Colorado physician and one of historical interest or importance. Suggestions of possible candidates to be profiled are welcomed.***

Edward Jackson, MD, was one of Colorado's most famous physicians. His national and international reputation could hardly be surpassed by any other physician. He was born at West Goshen, Chester County, Pennsylvania, March 30, 1856. He first came to Colorado in 1894 seeking a cure for his wife's tuberculosis. He returned to Philadelphia after her death in 1896.

Fearing for the health of his family and remembering the benefits of Colorado weather, he returned to Denver for good in 1898.

Dr. Jackson was graduated from Union College, New York in 1874 with a degree in civil engineering. Two years later he decided to study medicine and received his MD degree from the University of Pennsylvania in 1878. His practice of

general medicine was interrupted by an attack of diphtheria which produced a prolonged period of post-diphtheric paralysis of his legs and ocular muscles. During his convalescence he became interested in refraction and diseases of the eyes. Upon recovery he pursued his new-found interest in ophthalmology. He was elected Professor of Ophthalmology at the Philadelphia Polyclinic in 1888 and surgeon to the Willis Hospital in 1890. At the age of 35, he was the youngest full surgeon on the staff.

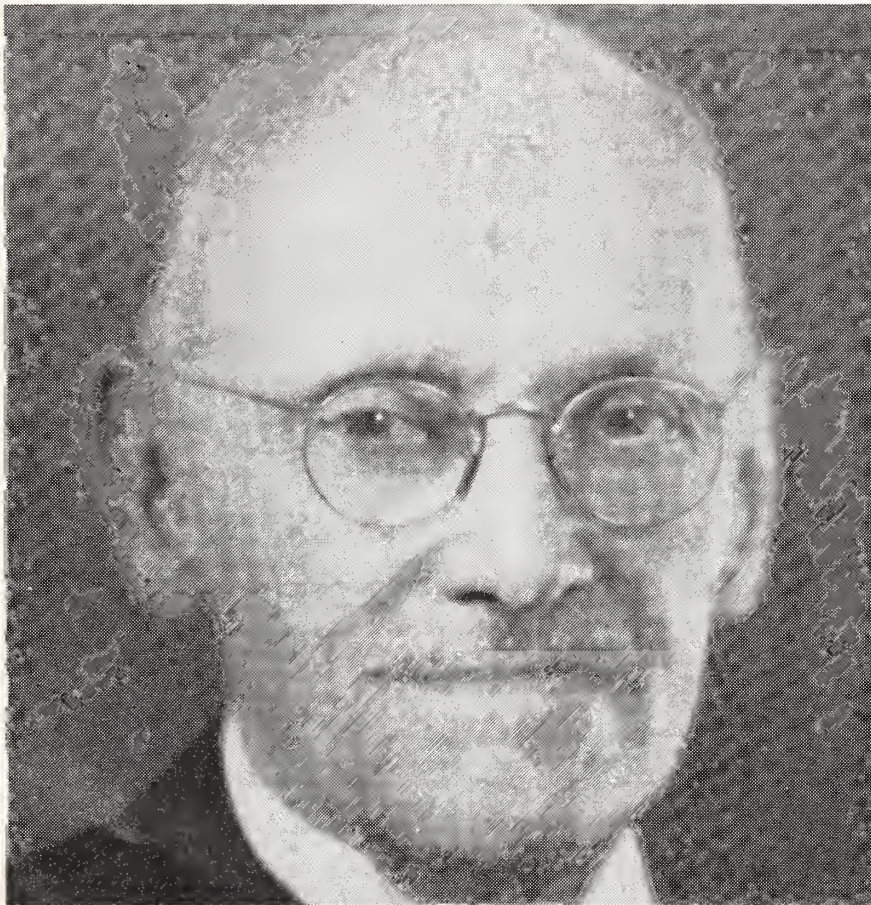

About this time he began to expand his educational and administrative ideas which would lead to his eminence as a leader in all fields of ophthalmology. He was the prime mover of, and became the first president of, the American Board of Ophthalmology, which was the first medical specialty board. It was established in 1914 and was originally called the American Board for Ophthalmic Examinations. He was a founder, contributor, and/or editor of all the major ophthalmologic journals during his 50 years of practice.

His presence in Denver attracted all the finest ophthalmologists in the world to the Mile High City and made Denver a premier center for the diagnosis and treatment of eye diseases.

In 1905 Dr. Jackson became Professor of Ophthalmology in the medical department of the University of Colorado. He became Professor Emeritus in 1921.

From early on in his career he was concerned about the relationship between physicians and those who were concerned primarily with eye refraction. He first wrote about his concern in 1896; this concern was a continuing subject of his addresses and writings throughout his life. Colorado's law prohibiting optometrists and opticians from diagnosing or treating diseases, defects or injuries of the eye, or to use therapeutic measures other than glasses for the treatment of the human eye was instituted at his urging.

His energies seemed to have been boundless. He was a founding member of the Colorado Mountain Club, a member of "Denver Society," Chairman of the AMA Section of Ophthalmology and Otolaryngology, President of the Denver and Colorado Medical Soci-

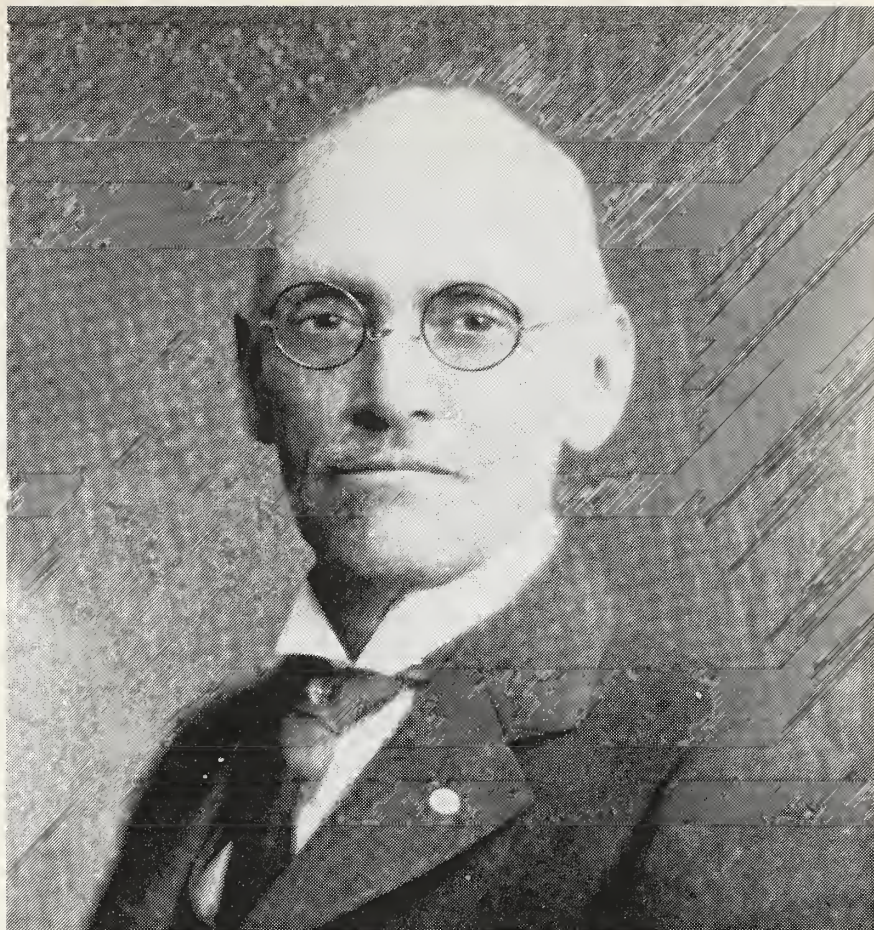

eties and of many other professional societies.

Dr. Jackson died in Denver on October 29, 1942 at the age of 87. Although there was evidence of gradual deterioration of his mental and physical acuity, he remained active and productive until the end. He conducted a conference on office management at the American Academy of Ophthalmology and Otolaryngology in Chicago from October 11 to the 14th, 1942. A week after returning to Denver he walked into the office of a friend asking to be "looked over" because he had felt a little dizzy upon arising that morning.

Dr. Jackson collapsed after taking a shower on the morning of October 27, lapsed into coma and died two days later. Another of Colorado's famous physicians, one who brought fame and reknown to himself and the state, had passed on to his reward.

# Plastic Education: Looking for Mr. Goodbank

The High Cost of Medical Education in Colorado

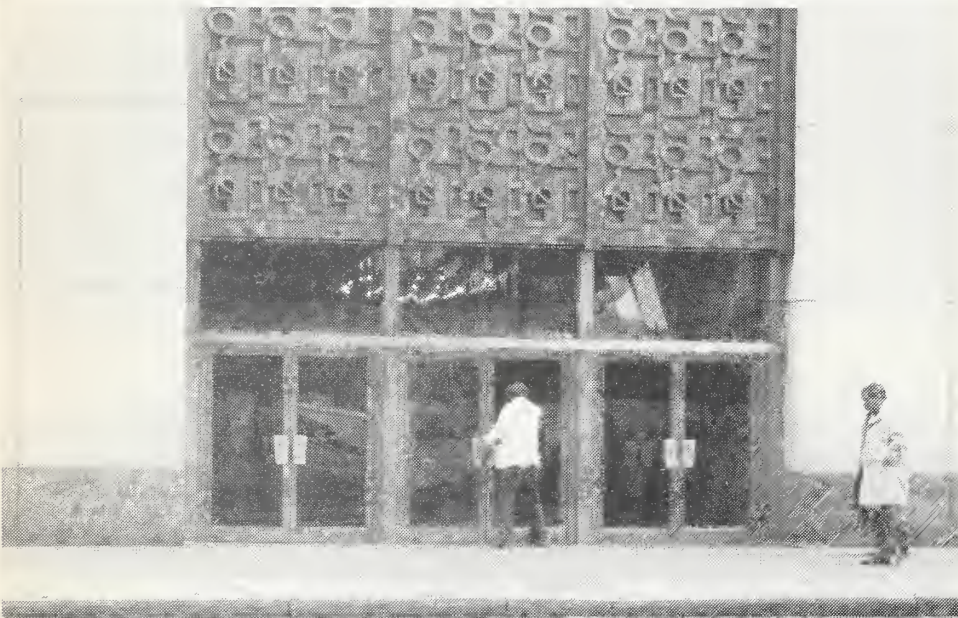

by Sheila Swan  
Publications Editor

"Attending medical school has become a luxury that many students cannot afford," stated Nancy Nelson, MD, Assistant Dean for Counseling and Advocacy at the University of Colorado School of Medicine (UCSM).

In several recent interviews, students, professors and deans at the University of Colorado School of Medicine discussed the financial aid situation at the school with *Colorado Medicine*. The profs were: Jack Nolte, Ph.D, Assistant Dean for Curriculum and Acting Chairman for Anatomy; Ron Franks, MD, Assistant Dean for Student Affairs and Assistant Professor of Psychiatry; Claude Selitrennikoff, Ph.D, Assistant Professor of Anatomy and Dr. Nelson, who is also Associate Clinical Professor of Pediatrics.

The students were Aileen Nobles, Harlan Ribnik and Scott Corliss, who is President of the CMS Student Medical Society.

Medical school at UCSM may never have been cheap, at least in recent years, but today medical students in Colorado are bearing a greater share of the cost of their education than ever before. Currently, tuition for resident first- and second-year medical students is \$5,986. (Five years ago the tuition

was approximately \$1,800.) According to data provided by the medical school, this makes CU the second most expensive state-supported medical school in the country, after Penn State. Out-of-state students are assessed at the full cost of their education, approximately \$24,000 a year.

Dr. Nolte commented that "state support for the Colorado (resident) medical student is the lowest in the Western region." Private medical schools, such as Johns Hopkins, may be more expensive than UCSM. However, Johns Hopkins is more heavily (grant) endowed, making the cost of medical education there less than that at UCSM, he said.

The financial aids office at UCSM estimates that costs for a single student (tuition, fees books and living expenses) exceed \$14,000 per year.

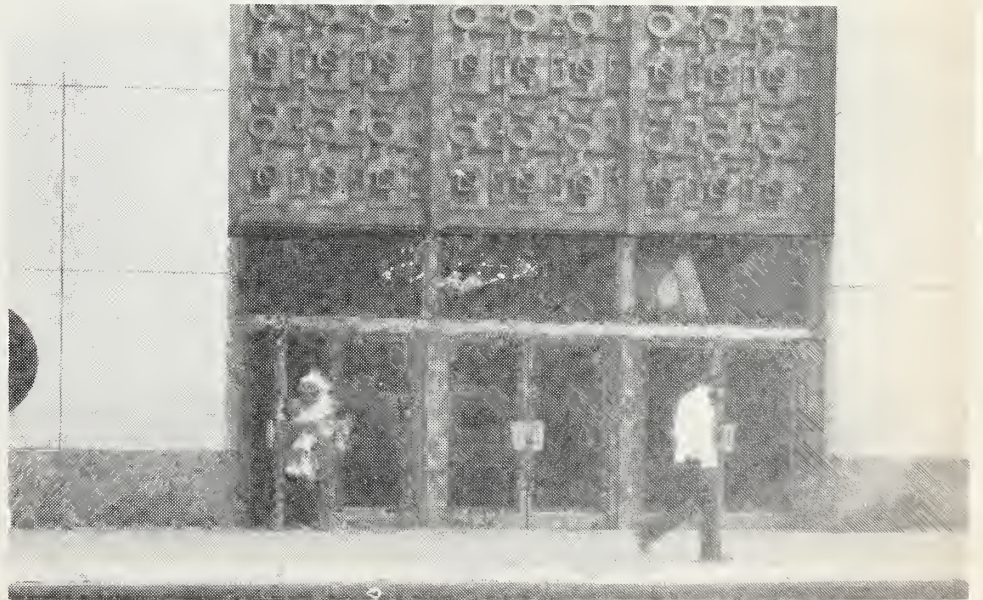

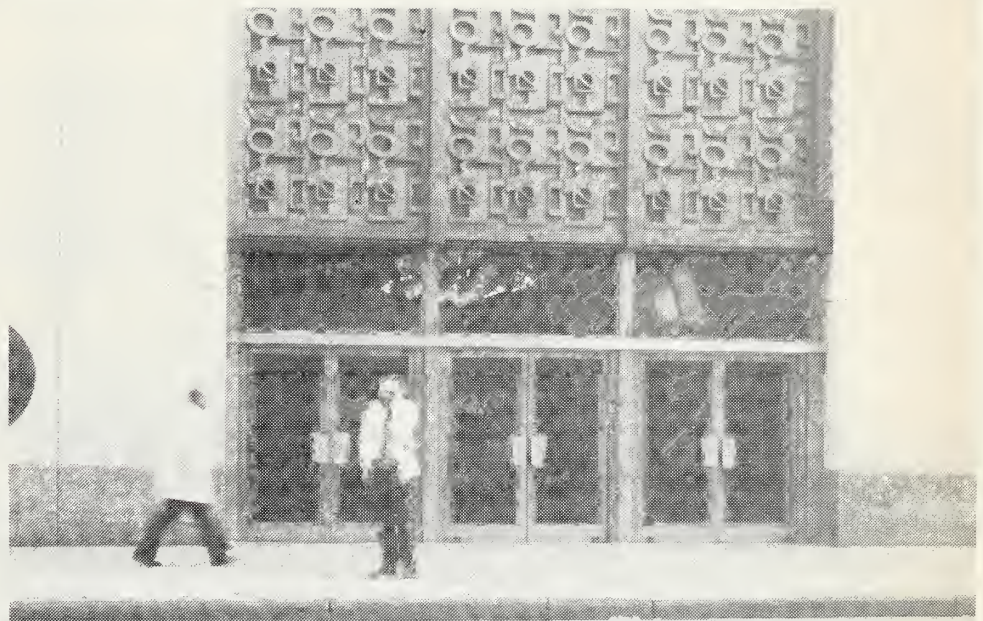

There are a number of reasons why medical school expenses have increased so dramatically. One of the major factors in the tuition increase is a decision made several years ago by the Colorado legislature. According to Dr. Selitrennikoff, the legislature felt that medical students were not paying their fair share of the cost of their education. So, the legislature decided to enforce an existing law which stipulated that resident students must pay 25% of their direct education costs. Prior to this decision, medical students had been paying a much lower percentage of these costs.

At the same time, sources of financial aid are declining. Available grants are small in size and number. Other endowments, such as military scholarships, are highly competitive.

More than 75% of the students at UCSM have borrowed money from federally-subsidized sources. However, the availability of these loans is beginning to decline and the amount a student can borrow does not meet the total need. According to Dr. Selitrennikoff, the unmet financial need at the medical school is approximately \$475,000, "and that is a conservative estimate."

Other factors affect the cost of a student's education as well, stated Dr. Franks. Because enrollment is up, not all the student rotations can be handled at University Hospital. Thus, he noted, third and fourth-year students need cars to get to their rotations at different metro area hospitals.

Dr. Nelson commented that in the

**State support for the Colorado (resident) medical student is the lowest in the Western region.**

last 10 years, she has observed a wider mix of students matriculating into medical school. The students have a wider variety of economic and social backgrounds; "probably the average family income is less," she added.

Additionally, 40% of all the medical students today are women. Because more students of both sexes are entering medical school at a later age, more of them are likely to be married and to have children while in medical school, Dr. Nelson said.

What are the effects on the students of the high cost of medical education and what are some potential solutions?

The students and deans all spoke of the psychological stresses on many of the students because of their financial worries, stresses "that really eat you up," Mr. Ribnik commented.

The pressures are becoming significant for many of the students. Mr. Corliss noted that at a recent meeting of 300 medical students, 150, or half those present, said they would not be able to continue school unless they could find additional sources of financial aid.

Students try hard to live frugally, Mr. Corliss commented. "A lot of people buy generic food," he said. Used medical texts are also a common purchase. Many students live "double or triple" to an apartment. For entertainment, "anything you can do free" is popular, he said. Additionally, students enjoy getting on

the difference between the financial needs of medical students and the amount available through the financial aids office can usually be met only by means of unsubsidized loans.

These loans, such as the Health Education Assistance Loan (HEAL) program, charge market interest rates. The HEAL loans charged 16% interest during the 1981-82 academic year. Interest compounds and accrues while the student is in school.

In order to pay medical school expenses, students may incur debts of more than \$50,000, Dr. Selitrennikoff said. Dr. Franks added that it is a "specious argument" that physicians will get back their financial outlay from their practice income. Their income will depend on "what they practice and where they practice," he said.

Dr. Franks referred to these programs as "loans of last resort," noting that "the payoff is 10 to 1 over a 10-year period." He added, "it would be like putting your house (payments) on Mastercard."

However, what Dr. Franks called "plastic education" may be the only solution to which students can resort, unless other sources of aid are found.

Why should established physicians be concerned about the medical students at the University of Colorado when many believe that the medical field is becoming overcrowded? One answer, according to Dr. Nelson, is that the medical field

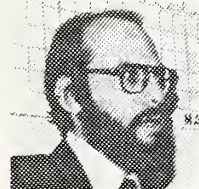

Approximately 46-47% of the graduates have stayed on or returned to Colorado, according to Dr. Franks. He stated that the majority of practicing physicians in the rural areas of Colorado are graduates of the University of Colorado. He added that non-Colorado graduates are more likely to settle in the Front Range area.

The question of what kinds of specialties the students will enter and where they practice, may be affected by their economic situation. According to Dr. Nelson, a number of students interested in primary care or research have indicated to her that they will have to go into the more lucrative subspecialties "because of the high cost of their medical educators." Ms. Nobles commented that a lot of her peers "are talking about going into emergency medicine or surgery because of the money."

What can be done to help meet the students' financial needs? The medical school is examining a number of options. Potential ideas include the conversion of some of the trusts endowed to the university into loan funds. Another is to establish sponsorship programs, i.e. whereby a health corporation might pay the expenses of a medical student in return for service after graduation.

Two projects in the making at this time are the Medical Student Employment Referral Service and the Student Centennial Loan Fund. The former program is aimed at increasing the availability of part-time jobs to medical students. However, a student's spare time is very limited. Presently the only summer available to a medical student to work is between his or her freshman and sophomore year. But what with the scarcity of well-paying jobs, especially for temporary work, combined with the need to pay expenses while working, students cannot save much money from a summer job. "If you're lucky, you can probably save \$1,000 in a summer," Mr. Corliss commented.

During the school year a student's time is even more limited. Currently a student must have the dean's approval to work. Although Dr. Franks said he is hoping to change that rule by the end of this academic year, neither the professors nor the

**Approximately 46-47% of the (UCSM) graduates have stayed on or returned to Colorado.**

committees, "because there are always free lunches."

What are needed, everyone agreed, are additional sources of financial aid. "Students are not afraid to borrow the money," Dr. Nolte commented. However, according to the medical school data,

and the citizens of Colorado in general will benefit from UCSM graduates who work in geographically underserved areas of the state or who take up their careers in less-lucrative specialties, e.g. pediatrics, or areas of academic research.

students perceive jobs for the students as the major solution to their financial woes.

For example, first and second-year students have to be in class 30-35 hours a week and another 35-40 hours, minimum, need to be saved for studying, Mr. Corliss said. Dr. Nolte noted that combining work with an already overcrowded study schedule is academically damaging for many students.

Ms. Nobles commented that she was working a part-time job until very recently. "Then the pressure got to be too much," she said. "I was neglecting my studies because I was too tired."

However, many practicing physicians had to work at least part of the time while they were in medical school. To the argument, "I had to go through tough times when I was in medical school," Dr. Franks responded, "But wouldn't you have been better prepared (to be a physician) had you been able to concentrate solely on your medical studies?"

Even though some students must combine jobs and studies, "it's a joke to think that a medical student can get a job which will pay all his

## Attending medical school has become a luxury that many students cannot afford.

expenses," Mr. Ribnik said. A student would need to earn at least \$12,000 (after taxes) from what would have to be a part-time job. "I can't do it," he said, "even with a master's (degree) in computer science, years of professional experience and a good professional reputation."

However, through the jobs program, students can build toward their professional futures "by meeting some of the docs in practice and making some contacts," Mr. Ribnik said.

What can interested (physician) medical society members do to help the students? "There are three things we would like to ask medical society members to do," Dr. Nelson said. She added, "we, and a number of the medical students, would be delighted to travel to any component (medical) society to discuss this situation."

First, physicians can discuss the

"urgent need" of medical students for the continued availability of loan funds at "reasonable interest rates" and a "reasonable repayment schedule."

Second, physicians or component societies can become "patrons" by making loans to individual students. Dr. Selitrennikoff said that these loans will be administered and facilitated through the medical school financial aids office.

Third, physicians can make donations to the Centennial Loan Fund. This fund, Dr. Nelson commented, "commemorates the continued joint efforts of the Colorado Medical Society and the University of Colorado School of Medicine in the second century of medical education in Colorado."

For more information on how to contribute to the student financial aids program, contact Dr. Franks' office at 394-7678.

# Cost Containment Report

---

***At its recent Spring meeting, the House of Delegates of the Colorado Medical Society engaged in considerable debate over the issue of cost containment. The opinions expressed and comments offered reflected a broad spectrum of viewpoints as to the position the CMS should take on the topic. The result of the discussion was the adoption of a resolution outlining the CMS policy on a number of measures that have been put forth as cost containment techniques. The resolution, together with the supporting report developed by a task force of the Council on Socio-Economics, is published below.***

---

Cost containment continues to be the most widely discussed topic within the health care field, and the debate goes on as to the nature of the "problem" and the most appropriate means to tackle it. In the midst of the continuing discussions, a number of initiatives are being undertaken in both the private and public sectors which are aimed at helping to reduce costs despite the absence of empirical evidence as to the effectiveness of the measures in achieving that objective. At the same time, expansion of efforts which, in the past, have demonstrated effectiveness in controlling costs is underway.

In Colorado, the public sector, via the Medicaid program, has begun the development and implementation of a number of activities that will, at least in part, alter both the structure for the delivery of health care and the reimbursement system. One of the catalysts for the current changes was the report of the Medicaid Task Force of the Colorado Medical Society. Among the cost containment proposals recommended in that report were suggestions for: recipient cost sharing (copayments); risk sharing between providers and payors (incentive pool); extensive utilization review; including the development of both patient and provider profiles; and, programs for patient and physician

education in helping to control costs.

Recognizing that further measures to control utilization, and thereby reduce costs, might be forthcoming, several resolutions were proposed to the CMS Board of Directors last year. Two proposed resolutions asked the CMS to consider such measures as mandatory ambulatory surgery, case manager systems, pre-authorization requirements, and retrospective denial of payment for services, and to arrive at a consensus as to whether to support or oppose the measures. After considering the resolutions, the Board directed that the subject of Medicaid be referred to the Council on Socio-Economics with a request that data concerning the effectiveness of the types of programs outlined in the Medicaid Task Force Report and the proposed resolutions be assembled and provided to the component medical societies for their consideration and response.

In November of 1982, the Cost Containment Effectiveness Task Force was organized under the auspices of the Council on Socio-Economics with the expressed purpose of the exploration of the literature basis for the cost containment proposals outlined above.

Despite the relatively extensive search for documentation, which included on-line electronic literature

searches, contacts with third party payors, with the Health Administration faculty of the University of Colorado Health Sciences Center, and with the Department of Social Services and other interested parties, the relative newness of many of the proposals resulted in a paucity of written studies of the effectiveness of the measures for controlling costs.

What the literature did reveal was an extensive application of a number of cost containment programs by a wide variety of employers, insurers, governmental programs and others which included some of the measures discussed above, but which also included such programs as: pre-admission testing, second-opinion programs; and expansion of alternative delivery systems (e.g., HMOs and IPAs, as well as PPOs).

In the report below an attempt is made to summarize the available literature on the effectiveness of the measures discussed above. In some instances, the documentation is absent, in others it is equivocal at best; in some the documentation is quite clear. Given the breadth and depth of the overriding topic under consideration — cost containment — the report is not meant to be an exhaustive analysis, but rather a topical overview.

The Task Force recommendations are embodied in Resolution 12, adopted as amended at the Spring 1983 Interim Meeting, and included at the end of this report.

## Case Management

As a result of the Omnibus Reconciliation Act of 1981, states have been granted the flexibility to institute programs (upon receipt of an approved waiver from HHS) which lock-in Medicaid recipients to specific providers for the coordination of all their health services. The programs variously known as "case manager systems," or "primary care provider networks," are now being implemented in a number of states — Utah, Michigan, California, New Jersey, Iowa, and Massachusetts, among others.

The concept of a primary care physician serving as the coordinator, or gatekeeper, to the utilization of services arises primarily from the experience in the HMO setting. Its application to the fee-for-service sec-

tor, and particularly in Medicaid programs, however, is quite new.

The premise of this approach is that the doctor-patient relationship will be improved, and appropriate utilization ("doctor-shopping," inappropriate specialty self-referral, and inappropriate use of the emergency room) will be curtailed through the identification of a single physician for the coordination of the patient's care.

To date, the only literature which is available comes out of the results of a pilot case management program that was implemented in Massachusetts. Despite the fact that there were a number of problems encountered in the implementation of the program, the evaluation of the program results seems to indicate that the case management approach may be effective in lowering utilization, maintaining quality of care and patient satisfaction, and lowering Medicaid program costs.<sup>1</sup>

In a research paper prepared under the auspices of a grant from the Office of Research, Demonstrations and Statistics of the Health Care Financing Administration, Bruce Spitz states that, "An extensive literature on (primary care) networks (PCNs) does not exist." However, he goes on to say that, "PCNs seems to be the most promising for introducing competition into the market, altering expensive and inefficient incentives in the delivery system, and providing care in a manner consistent with public policy."<sup>2</sup>

Despite the unavailability of specific documentation as to the cost savings realizable from the primary care network approach, the Colorado Medicaid program is proceeding with the development of a case manager system which will be implemented in several counties to begin with, and eventually, on a state-wide basis.

The program specifics are being developed with extensive physician input through the Physician Advisory Committee which includes physicians representative of a wide variety of geographic, specialty, and practice-setting criteria. The case management concept for the Colorado Medicaid program received the endorsement of the CMS Council on Socio-Economics following a presentation by the Department of Social Services in

November, 1982.

### **Mandatory Ambulatory Surgery**

There was no literature available that addressed the issue of ambulatory surgery on a mandatory basis. The available literature did discuss the efforts currently underway to encourage the use of ambulatory surgery over in-patient surgery for those procedures that are appropriate, and where other circumstances that would contraindicate ambulatory surgery do not exist.

There seems to be a consensus that approximately 20-40% of surgical procedures can safely and appropriately be done on an ambulatory basis. There is a great variation, however, in the amount of ambulatory surgeries currently being done both within and across geographical areas.

In a number of the programs cited, incentives in the form of full coverage or lower cost sharing are provided to insureds who have their surgeries performed on a "same day" basis. In others, the incentives are extended to physicians as well, reimbursing at a slightly higher rate if the surgery is performed in an ambulatory setting.

The Health Research Institute, in a recent study, found that 92% of 507 employers surveyed encouraged, and provided coverage for ambulatory surgery.<sup>3</sup> Examples of companies who have instituted plans to encourage ambulatory surgery include: Burlington Industries, Inc. (Greensboro, N.C.), Campbell Soup Company (Camden, N.J.), The Columbia Gas System, Inc. (Wilmington, Del.), International Harvester (Chicago, Ill.), Mobil Oil Corp. (New York, N.Y.), and Motorola, Inc. (Schaumburg, Ill.).

Studies have indicated that ambulatory surgery can be performed safely. The Society for the Advancement of Free Standing Ambulatory Surgical Care reported no deaths in 80,000 operations performed in 19 Free Standing Ambulatory Surgery Centers (FASC) through 1976. In 1976, only three of 22,000 patients were hospitalized for emergency complications from their outpatient surgery in these same facilities.<sup>4</sup>

Substantial savings may accrue to individual patients when the cost of a two or three day hospitalization

can be avoided. In one study, it was found that average total costs ranged from 18.6% to 38.7% less in the FASC setting than in a hospital inpatient setting.<sup>5</sup> Unresolved, as yet, is the issue of total community costs as surgeries are shifted from the inpatient to the ambulatory setting.

Recently, Blue Cross and Blue Shield of Colorado proposed the implementation of a program requiring surgeries to be performed on an ambulatory basis unless certification was received prior to the procedure that there were existing factors which indicated the surgery should be performed on an inpatient basis. The list of 51 procedures was developed without physician input. Due to the significant amount of protest that BC&BS received from individual physicians and CMS, the program was withdrawn pending further dialogue with the medical community.

### **Pre-certification Programs**

Pre-certification refers to the requirement of receiving authorization prior to admission into an inpatient setting for non-emergency surgical procedures, diagnostic work, medical observation, etc., or payment will be withheld or denied.

Pre-certification also arises primarily from the IPA/HMO setting where careful review of inpatient utilization is required for the continuing viability of the program.

Recently the concept of pre-certification has been adopted in a number of insurance plans, and preliminary results indicate that it has resulted in cost avoidance and savings in some instances. The Health Research Institute, a California based research/consulting firm, surveyed 507 employers in 1981 and found that 13% have health insurance plans that provide for pre-certification of all non-emergency hospitalization. The average savings was estimated to be 1% of the employer's total health care costs.<sup>6</sup>

An Inter Study report for the National Chamber Foundation reports that a Certified Hospital Admission Program (CHAP) instituted in 1972 by the Medical Care Foundation of Sacramento, California, to contain costs in their Medicare program resulted in savings of an estimated 15,795 hospital days in its first year of operation.<sup>7</sup>

Similarly, Blue Cross of Central Ohio has implemented a pre-admission review program and reported that, while, "...it is too early to tell if the program definitely is changing utilization patterns in the area... Blue Cross has been encouraged by the results."<sup>8</sup>

The State of Maryland has signed a contract with the state medical society to perform pre-admission review. The medical society then subcontracts with local foundations and PSROs to perform the reviews. Once again, the relative recency of the program precluded the availability of conclusive evidence on the anticipated savings, but preliminary results would seem to indicate the possibility for significant decreases.

The Health Maintenance Life Insurance Company of Fountain Valley, California, reports a significant reduction in the hospital utilization rate for those it insures by using a mandatory prior authorization program. They reported that of 714 days/1,000 requested, 492 days/1,000 were authorized and 510 days/1,000 used in 1978. In 1979, the utilization figure was 450 days/1,000 insured. Company officials credit the low hospital utilization rate directly to the prior authorization policy.<sup>9</sup>

Obviously the reports cited do not go into detail on the programs, nor do they explain whether the results reported are the outcomes of careful evaluative studies. Nevertheless, the anecdotal information appears to strongly support the concept as a cost containment measure.

### **Retrospective Denial of Reimbursement**

No literature could be located that specifically addressed retrospective denial as a single cost control measure. Undoubtedly, it exists as a feature of the overall utilization review program of some health plans.

Writing in the *Journal of the American Medical Association*, Eisenberg and Williams reported on a survey of studies that used various incentives and sanctions to alter physician practice toward a higher cognizance of the cost implications of their clinical decisions. They note that the, "...use of penalties shows equivocal results."<sup>10</sup>

Writing in a later article published in *Medical Care*, however, the same authors report, "Several prototype programs have shown that change in physician behavior may be accomplished, particularly when there exists the threat of denial of payment for unnecessary services."<sup>11</sup>

### **Recipient Cost Sharing**

A number of studies have been, and are currently being, conducted on the potential of cost sharing by recipients as a means of controlling the utilization of services. The premise has been that patients fail to consider the economic consequences of their health services utilization decisions when they are not responsible for paying the bill. The studies have been conducted to test whether increasing the recipient's proportion of out-of-pocket expenses will result in lower utilization of services. One of the pressing issues that isn't adequately addressed is whether decisions to forgo the use of health services result in increasing risk for negative health consequences.

A recent U.S. Government Accounting Office report cites the results of studies on cost sharing, including the study currently underway by the Rand Corporation, and states, "...several major studies have shown that increased consumer sharing of health care costs reduced the quantity of services used and, as a result, lowered total health care expenditures."<sup>12</sup>

### **Risk Sharing**

The concept of risk sharing is somewhat nebulous, but is used here to describe a program or system in which some portion of a physician's reimbursement for services rendered is retained in a separate fund that becomes available to the physician if total program costs do not exceed a given parameter.

Eisenberg and Williams, reporting in *JAMA*, note that the, "...most convincing evidence of the effectiveness of financial incentives to change physician behavior comes from studies in which physicians are at risk for both financial penalties and rewards."<sup>13</sup>

Risk sharing most often occurs in IPA/HMO type systems, and the concept rarely (if ever) is im-

plemented as a cost containment technique in and of itself. There is evidence, however, that this is an effective method of restraining costs and will be discussed in greater detail under the category Alternative Delivery Systems.

### **Utilization Review**

Perhaps no other aspect of cost containment quality control has received as much attention as the concept of utilization review. UR programs tend to have contingents of both advocates and opponents, both of which strongly (and sometimes vehemently) defend their views. The evidence on the effectiveness of utilization review as a cost containment technique is conflicting. A number of reports allege to the substantial savings that UR programs effect, while others still contest the validity of the findings or report opposite results.

There are three approaches to utilization review: prospective (discussed above under Pre-Certification), concurrent, and retrospective. Concurrent review involves determining the necessity and appropriateness of treatment and continued inpatient care during a patient's hospitalization. Retrospective review examines whether care provided was appropriate, and the extent to which a hospitalization and services received should be reimbursed.

The information available from a number of foundations for medical care (FMCs) and professional standards review organizations (PSROs) supports the concept of utilization review as a cost savings measure. Colorado's own foundation for medical care, CFMC, reports that from 1976-1979 they were able to save the Prudential Corporation \$578,831 through costs avoided by utilization review.<sup>14</sup> They report saving 13,967 hospital days for 1979 through all of their programs, resulting in a cost savings of approximately \$2.1 million. In a more recent report, the CFMC cites a cost savings of \$800,000, and reduction (or savings) in hospital days of 3,000 through the implementation of a utilization review program for the CF&I Corporation.<sup>15</sup>

A report by the National Chamber Foundation notes that, "Goodyear Tire and Rubber Company ex-

perienced a 12% reduction in average length of stay in 1974 ...after implementing utilization review." Based on 600 hospital admissions, management calculated a resultant savings of \$30,000.<sup>16</sup>

The development of profiles to identify physicians with unusually high levels of billing, and to assess whether the high level in a given case is justified, or the result of "over servicing," is a development increasingly being implemented as reported in a recent article in *Inquiry*. Without citing specific figures, the study reports that, "...the very establishment of a monitoring system...quite apart from its operations, may induce compliance with a stated policy."<sup>17</sup>

Nevertheless, the evidence for the effectiveness of UR is not conclusive. In the National Chamber article cited above, the authors note that studies purporting to demonstrate the effectiveness of UR, "...may overestimate savings or estimate them inaccurately..."<sup>18</sup>

The most common shortcomings and errors are listed by the authors, including:<sup>19</sup>

1. Estimated savings are often based on the assumption that reductions in average length of stay for the study population are due *only* to the utilization review process.
2. Costs of alternative treatment are often ignored in an effectiveness analysis.
3. Savings cannot be simply calculated by multiplying saved hospital days by a hospital's per diem rate.
4. Some of the documented savings generated through utilization review programs may in fact be largely accounted for by administrative denial of payment.
5. No standardized guidelines exist for determining what level of utilization is appropriate.
6. There are great varieties in age and sex distribution which preclude the applicability of findings from one population to another.

The debate over utilization review will undoubtedly be intensified with the publication of regulations affecting review that will implement sections of the Tax Equity and Fiscal Responsibility Act of 1982. As the ostensible and manifest purpose of

the process becomes cost reduction rather than quality of care, the generation of data that demonstrates whether UR is indeed effective in promulgating savings will become even more important.

### Pre-admission Testing

A number of reports have been published concerning the cost savings potential of pre-admission testing (PAT), but here, as well, the evidence does not conclusively settle the issue one way or another.

The Health Research Institute reports, in its study, that approximately 76% of employers surveyed had provided coverage for pre-admission testing. The resulting savings were estimated to be 0.8% of total health costs.<sup>20</sup>

A 1978 article by Magerlein, et al, in *Hospital Financial Management*, states that, "...PAT can, on the average, remove 0.5 days from the LOS (length of stay) for all schedulable adult medical/surgical and pediatric patients. Furthermore, it is assumed that two percent of those patients who have PAT will subsequently not be admitted to the hospital."<sup>21</sup>

Additional studies, however, indicate that the effectiveness of PAT has not been established. Recent evaluations in Massachusetts, Michigan, and Pennsylvania found that PAT may not achieve high cost-savings. One report concluded that, "...these (PAT) programs alone do little to reduce hospital lengths of stay."<sup>21</sup> Additionally, it was stated that, "PAT may have limited usefulness in traditional fee-for-service settings, since providers in these settings lack the financial incentives to use the programs."<sup>22</sup>

On a more optimistic note, one of the studies cited above indicated that, "Widespread interest in PAT may encourage hospitals to be more efficient in their admission and inpatient presurgical testing procedures."<sup>23</sup>

### Second Opinion Programs

The Health Research Institute found in its survey that 67% of employers were paying for second opinions for their insureds; 47% were actively encouraging second opinions; and 2.1% made second opinions mandatory. The overall savings from second opinions was

estimated to be 0.7% of total paid claims.<sup>24</sup>

In two studies reported in the January, 1982 issue of *Medical Care*, the conclusions reached were that second opinions do result in cost savings. Ruchlin reported that 16% of individuals required by their insurance carrier to obtain a second opinion received a non-confirmation of their surgery and the benefit-cost ratio of the program was 2.6:1 (i.e., for each \$1 spent, \$2.60 was saved).<sup>25</sup>

Grisez-Martin, et al, determined that non-confirmation rates averaged 14.5%, and reductions in the volume of relevant procedures was 20%. The benefit-cost ratio was estimated to be between 3-and 4:1.<sup>26</sup>

An editorial opinion on the two studies above, appearing in the same issue of *Medical Care*, however, stated, "First, mandatory second opinion programs probably do save more money than they cost. They are, by the metric, 'cost beneficial.' Second, knowing that S.O. (second opinion) programs successfully deter surgery and save money tells us little about whose surgery was forestalled. We cannot yet describe the consequences of these programs on the health status of the population to which they are applied."<sup>27</sup>

The issue of voluntary vs. mandatory second opinion programs in terms of potential for cost savings is not settled either. Studies by Eugene McCarthy of Cornell University indicate that, "...of the two types of second opinion programs, mandatory programs have the greater cost savings potential..."<sup>28</sup> However, it is also reported that, "a mandatory program is also difficult to enforce; denial of payment if second opinions are not obtained is likely to cause considerable dissatisfaction and could even invite legal challenge."<sup>29</sup>

Because of the conflicting evidence and problems inherent in second opinion programs, their effectiveness as cost containment mechanisms has not yet been proven.

### Alternative Delivery Systems

Alternative Delivery Systems (ADSs) is the term generally used to describe the service provision ar-

rangements generally characterized by Pre-paid Group Practice (PGP) HMOs, Independent Practitioner Associations (IPA) HMOs, and, most recently, Preferred Provider Organizations (PPOs). Although there is considerable variation among these examples of ADSs, their common feature is a change in the incentive structure for providing and paying for services delivered that differentiate them from traditional fee-for-service medicine.

The controversy over the cost and quality issues in HMOs has been taking place for years. To this point, the evidence seems to fall heavily on the side of the effectiveness of HMOs (specifically the pre-paid group practice models) in saving costs while maintaining quality.

A recent publication of the American Medical Association representing the results of an extensive study of HMOs states, "In general the two parts of the study yielded consistent results. In regard to cost, HMOs appear able to provide care for their members at a lower total cost (premium plus out-of-pocket) than most other health care delivery and financing systems. To the extent that various factors used in quality assessment have been used to measure care for HMO enrollees and for a comparable fee-for-service population, the medical care delivered by the HMOs appear to be of a generally high quality."<sup>30</sup>

Fuller, et al, in a "Report on a Study of Medicaid Utilization of Services in a Prepaid Group Practice Health Plan," found, "Results indicate: Ambulatory physician encounter rates decreased 15%, drug utilization was down 18%, hospital admissions decreased 30%, and hospital days declined 32% after enrollment." The savings attributable to the program were estimated at 37% when compared to Medicaid fee-for-service per capita costs over the same period.<sup>31</sup>

The cost savings attributable to PGP type HMOs have not been as well documented in IPA type HMOs. A recent study by the U.S. Government Accounting Office states, "There is substantial evidence that PGPs have lower total enrollee health costs...when compared to enrollees in conventional insurance plans. Limited studies of IPAs show that similar cost savings have not

been realized."<sup>32</sup>

*American Medical News* recently reported on an essay by David Mechanic, Ph.D, Dean of the Faculty of Arts and Sciences at Rutgers University. Dr. Mechanic stated there was, "ample documentation that prepaid group practices — the dominant type of HMO — reduce hospital costs by 20% to 40%. The cost advantages of independent practice associations (IPAs) are less evident."<sup>33</sup> Dr. Mechanic attributed the cost effectiveness of HMOs to the structure of the incentive program. "Physicians who work in prepaid group practices, primarily on salary, do not have incentives to hospitalize a patient unnecessarily. Indeed, this may require more time, effort and inconvenience, with no further remuneration."<sup>34</sup>

The evidence that HMOs may be effective cost containment mechanisms is one of the principal reasons for the growing number of HMOs across the country. The Health Research Institute, in the study cited earlier, indicated that 67% of employers surveyed were offering Alternative Delivery Systems as part of their employee health plans. ADSs are estimated to have saved 8.5% of total health care costs, with most of the savings attributable to HMOs.

The cost effectiveness potential for HMOs is not without challenges, however. Writing in the Fall 1982 issue of *Inquiry*, Hellinger, in an article entitled "Perspectives on Enthoven's Consumer Choice Health Plan," quotes another researcher who has done extensive studies on HMOs and states, "If competition between HMOs and conventional providers does affect overall costs, one might expect this situation to appear in California with its massive Kaiser plans, its competing HMOs, and a documented history of Blue Cross concern...but there is no evidence that massive HMO enrollment has resulted in overall cost containment."<sup>35</sup> Further on in the article, the author claims, "It is important to note...that it has never been empirically determined whether HMOs have attained their cost savings because of the structure of their financial incentive or because of the nature of their members and physicians...In sum, there is no firm empirical evidence

on the ability of ADSs to limit physician use of resources."<sup>36</sup>

PPOs, or Preferred Provider Organizations, are the most recent development in the category of alternative delivery systems. Because of the recency of their development, PPOs have not been documented in the literature as to their cost containment effectiveness.

### Physician Education

Until recently, little attention was given in traditional medical training to the business side of medical practice, especially any concern with the costs of health care. Lately a number of efforts have been undertaken to raise physician awareness of the cost effects of their clinical decision making.

Several studies have been undertaken to determine the effectiveness of the educational efforts to help physicians provide more cost effective services. Some of the studies set up experimental programs in which a variety of incentives and sanctions were introduced to determine their effect on behavior. The most effective approach, apparently, was one in which the physicians were included in the early discussions of the "problem" of costs, and then given feedback about their performance relative to standards which they had designed.

Two recent articles in *Medical Care* appear to substantiate the claim for the effectiveness of educational efforts. David Cohen, MD, et al, found that in providing cost information to physicians regarding various tests ordered, "Test usage fell during the experimental conditions and continued to fall after the experiment ended."<sup>37</sup> A second study, reported that, "overall, auditing of physicians test-ordering behavior along with feedback concerning appropriate test ordering appears to be the most consistently effective strategy for modifying physician test-ordering behavior."<sup>38</sup>

Writing in the May 1981 issue of *Colorado Medicine*, Steven Lowenstein, MD, stated, "Experience suggests that health professionals and trainees can learn more effective habits of practice, and that costs can be reduced with no adverse effect upon the quality of patient care."<sup>39</sup>

## Conclusion

The plethora of cost containment mechanisms currently in place and under development indicates the debate will continue, for years to come, over which are effective and which are not. As the measures are implemented by increasing numbers of employers, third party payors, and governmental programs, physicians will be faced more and more frequently with the dilemma of refusing to participate and thus being shut out, to a growing degree, to access to the patient market, or going along with measures that have been implemented without their advice or consent, and which may be fundamentally anathema to the principles under which they have traditionally provided care. The task for physicians appears to be, at least in part, that of deciding which mechanisms are worthy of further pursuit; and meriting physician advice about their development and implementation.

In making those decisions, the first criterion must always be that of quality of care. Any mechanism which adversely effects the quality of medical care, regardless of demonstrated or presumed potential for cost savings, must necessarily be rejected without further consideration. Those measures which uphold quality standards for medical practice and which may at the same time promote savings in cost are deserving of physician support.

The Task Force, therefore, recommends that serious consideration be given to Resolution 12 which outlines the findings reported above and calls for the Colorado Medical Society to adopt specific policies.

## Resolution 12

### Introduced by:

Council on Socio-Economics

### Subject:

Cost Containment

### Referred to:

Reference Committee  
on Socio-Economics

**Whereas**, the Report of the Cost Containment Task Force addressed a number of cost-containment measures, and has attempted to delineate those which may have  
(Continued on p. 135.)

There was an extensive presentation by the Building Committee at the recent Interim Meeting of the House of Delegates. The following Partnership proposals were presented in detail, recommended for approval by the Building Committee and the Board of Directors, and approved by the House of Delegates.

## **FOR INFORMATIONAL PURPOSES ONLY**

### **SUMMARY OF OFFERING**

**\$2,600,000 maximum March 1, 1983**

## **COLORADO MEDICAL LAND PARTNERSHIP, LTD.**

5,200 Units of Limited Partnership Interests — \$500 Per Unit

Minimum Investment: Five Units (\$2,500); or

Four Units (\$2,000) for an Individual Retirement Account

### **PARTNERSHIP OBJECTIVES:**

Acquire 10.0 acres of land from the Colorado Medical Society ("CMS"), sell approximately 5.0 acres ("East Tract") for a substantial return of funds to investors and to lease the remaining 5.0 acres ("West Tract") to the Colorado Medical Building Partnership, Ltd. with the sale of the West Tract to CMS to occur within 7-10 years.

### **FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Land Partnership.

2) Units of Interest to be sold: Up to 5,200 Units for maximum gross proceeds of \$2,600,000.

### **INVESTMENT OBJECTIVES:**

The Land Partnership's objectives are primarily designed for pension and profit sharing programs and include: (i) to share in the appreciation of the equity of the East and West Tracts, which appreciation will be realized upon the sale of such Tracts; (ii) to provide the Limited Partners with cash distributions generated through lease payments commencing approximately August 1, 1983; (iii) to provide the Limited Partners with a substantial return of funds upon the sale of the East Tract for a minimum of \$1,400,000 guaranteed by CMS; any cash in excess of \$1,400,000 will be allocated 75% to the Limited Partners and 25% to the General Partners; (iv) to obtain long-term appreciation in the West Tract of not less than \$1,500,000, guaranteed by CMS, with the sale to occur within 7-10 years; and (v) to provide Limited Partners with an increased projected after tax annual return upon the sale of the East Tract.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

**FOR INFORMATIONAL PURPOSES ONLY**

## **SUMMARY OF OFFERING**

**\$3,800,000 maximum March 1, 1983**

### **COLORADO MEDICAL BUILDING PARTNERSHIP, LTD.**

7,600 Units of Limited Partnership Interests — \$500 Per Unit

Minimum Investment: Five Units (\$2,500); or

Four Units (\$2,000) for an Individual Retirement Account

#### **PARTNERSHIP OBJECTIVES:**

To lease approximately 5.0 acres of land from the Colorado Medical Land Partnership, Ltd. and construct a commercial office building thereon of five stories to become the headquarters and conference center for the Colorado Medical Society ("CMS") and its affiliated entities and to lease the remaining office space to third parties.

#### **FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Partnership.

2) Units of Interest to be sold: Up to 7,600 Units for maximum gross proceeds of \$3,800,000. In addition to using gross proceeds from the sale of Units, the Partnership will obtain additional funds in the form of a mortgage in the amount of approximately \$5,000,000 to finance the proposed building.

#### **INVESTMENT OBJECTIVES:**

The Partnership's objectives are primarily designed for individual investors and include: (i) to obtain long-term appreciation in the value of the building; (ii) to pay 99% of the tax benefits to the Limited Partners; and (iii) to provide Limited Partners with a projected after tax 3 for 1 return of their net investment within 8 years through a mandatory buy-out of this Partnership by CMS.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

**FOR INFORMATIONAL PURPOSES ONLY**  
**COLORADO MEDICAL SOCIETY**  
**EXPRESSION OF INTEREST**

Based on the summary descriptions of the proposed Limited Partnerships, the EXPRESSION OF INTEREST can be shown, as follows:

A. Land Units of the proposed Colorado Medical Land Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,00] for an Individual Retirement Account) to be sold at \$500 per Unit.

B. Building Units of the proposed Colorado Medical Building Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,000] for an Individual Retirement Account) to be sold at \$500 per Unit.

Units in either the Land or the Building Partnerships, Ltd., can be purchased through 1) Individual Ownership, 2) Trustee (Trust, Pension Plan, Keogh, IRA), 3) Corporation, 4) Custodian or through 5) Rollover of Existing Colorado Medical Society Bond Proceeds.

If you wish to make an EXPRESSION OF INTEREST, please complete the following and return to the Colorado Medical Society, 6825 E. Tennessee Avenue, Building 2, Suite 500, Denver, CO 80224:

These proposed Units would be registered as follows:

## April

**15 High Risk Pregnancy** — UCLA, Los Angeles, 8:30 am to 4:30 pm, Room A2-342, A level auditorium, Factor Building. 6 hours Category 1 credit. Fee: \$90 for physicians, \$65 for nurses. For more information, contact Health Sciences, UCLA Extension, PO Box 24901, Los Angeles, California 90024. Phone: (213) 825-8421.

**16 The History of the Division of Child Psychiatry, University of Colorado Medical School** — The Denver Hilton, Denver, Colorado. Evening banquet speaker to be announced. Contact Sylvia Bowen, Colorado Child and Adolescent Psychiatric Society, 8674 West Rice Ave., Littleton, Colorado 80123. Phone: (303) 979-6310.

**20-24 Mountain Medicine** — Stanford Sierra Lodge, Fallen Leaf Lake, California. 29 credit hours. Contact Wanda Ransdell, Office of Continuing Medical Education, School of Medicine, University of California at Davis, Davis, California 95616. Phone: (916) 752-0328.

**22 Children's Orthopaedic Day** — The Children's Hospital, Denver, Colorado. AMA Category 1 credit. Visiting Professors: Robert L. Larson, MD, of Eugene, Oregon and Dennis Lyne, MD, of Detroit Michigan. Contact Robert E. Eilert, MD, 1056 East 19th Ave., Denver, Colorado 80218. Phone: 861-6600.

**22-23 Alzheimer's Disease Update** — Denver, Colorado. Sponsored by Alzheimer's Disease & Related Disorders Association and Rose Medical Center, Denver, Colorado. Speaker: Robert Katzman, M.D., Professor and Chairman, Department of Neurology, Albert Einstein College of Medicine. April 22, 1983, 4:00 to 5:00 pm: Rose Medical Center Auditorium, 4567 E. 9th Ave.; for physicians, nurses, social workers and Allied Health Professionals. April 23, 1983, 10:00 am to 12:00 noon: University of Colorado Health Sciences Center, 2nd floor lecture hall, E. 8th Ave. at Albion St.; parking at E. 8th Ave. at Albion St. and E. 8th Ave. at Ash St.; for family members, the above listed persons and those unable to attend the April 22nd meeting. Contact Janice R. DeTemple, Alzheimer's Disease and Related Disorders Association, 4567 E. 9th Ave., Denver, Colorado 80220 for more information. Phone: (303) 393-7675.

**24-29 April 30 Optional — Clinical Management and Control of Tuberculosis** — Denver, Colorado. Contact Thomas S. Moulding, MD, Course Director, National Jewish Hospital and Research Center/National Asthma Center, 3800 East Colfax Ave., Denver, Colorado 80206. Phone: (303) 388-4461.

**28-30 Advanced Cardiac Imaging** — Sheraton Harbor Island Hotel, San Diego, California.

Sponsored by the San Diego Cardiac Center, Sharp Memorial Hospital. 18.5 Category 1 CME credit hours. Fee: \$250, \$150 for fellows and residents. For more information contact Nomi Feldman, Conference Coordinator, 3770 Tansy, San Diego, California 92121. (619) 453-6222.

## Apr 28-May 1 Third Annual Colorado Symposium on Emergency

**Care** — Tamarron Resort, Durango, Colorado. Featuring and international faculty with additional hands on experience. 28 hours of instruction offered. Continuing education for EMT's, paramedics, nurses and physicians. For more information contact Dr. Randall Schultz, Mercy Medical Arts, Suite 302, 1810 E. 3rd Ave., Durango, Colorado 81301, (303) 259-2015 or Karl Graham, REMT, Coordinator of Ambulance Services, Mercy Medical Center, Durango, Colorado 81301, (303) 247-4311, ext. 465.

**30 First Annual Horizons in Cardiology** — Sangre de Cristo Arts and Conference Center, Pueblo, Colorado. St. Mary-Corwin Hospital Regional Medical and Health Center, South Colorado Clinic, University of Southern Colorado. Contact James A. Sbarbaro, MD, FACC, Program Director, St. Mary-Corwin Hospital, 1008 Minnequa Ave., Pueblo, Colorado 81004. Phone: (303) 560-4000.

**30 Genital Herpes, New Dimensions in Therapy** — 8 a.m. to 5 p.m., 2250 Young Hall, UCLA, Los Angeles. 6.5 hours Category 1 credit. Fee: \$45.00. Contact Health Sciences, UCLA Extension, PO Box 24901, Los Angeles, California 90024. (213) 825-7257.

## May

**4 The Child as a Witness in Criminal Law** — Denver, Colorado. 7:30 p.m., Room 2H17, UCHSC Psychiatric Clinic. Contact Sylvia Bowen, Colorado Child and Adolescent Psychiatric Society, 8674 West Rice Ave., Littleton, Colorado 80123. Phone: (303) 979-6310.

**5 Neuropsychiatric Grand Rounds** — Colorado State Hospital, Pueblo, Colorado, Conference Room A. Contact James A. Scully, MD, 1600 West 24th Street, Pueblo, Colorado. Phone: (303) 543-1170.

**5-7 Arrhythmia Diagnosis and Management for the Non-Cardiologist** — The Inn at Loretto, Santa Fe, New Mexico. Sponsored by the New Mexico Heart Institute. Fee: \$150.00, includes workbook and answer book. 18 hours CME credit: AMA Category 1, AAFP, ACEP. Contact Barry W. Ramo, MD, Course Director, 201 Cedar, SE, Suite 604, Albuquerque, New Mexico 87106. Phone: (505) 242-2796.

**5-15** Great Britain - Spring Seminar: Diagnostic Imaging — London, England. Sponsored through the Department of Continuing Medical Education at West Park Hospital. Will be accredited by the American College of Radiology. Presenters: Drs. David Cosgrove, England; Keith Dewbry, England; Paul A. Dubbins, England; George Leopold, USA; Francis Weill, France. Contact the Secretary, Spring Seminar, West Park Medical Office Building, 22135 Roscoe Blvd., #104, Canoga Park, California 91304 USA. Phone: (213) 340-0580, ext. 280.

**6-14** 5th Annual Current Concepts in Musculoskeletal Radiology and Orthopedics held immediately following and in conjunction with the Inter-American Congress of Radiology in Acapulco, May 1-5, 1983. May 6th seminar will be at Coyoac and Mexico City, Mexico. 24 hours AMA PRA Category 1 credit. Fee: \$350. Contact Louis A. Gilula, MD, Mallinckrodt Institute of Radiology, 510 South Kingshighway Blvd., St. Louis, Missouri 63110 USA. (No phone given)

**17** Recent Advances in the Diagnosis and Treatment of Depression — Sterling, Colorado. Speaker: Charles Baucum, M.D. 2 hours Category 1 and AAFP prescribed credit. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 E. Colfax Ave., Denver, Colorado 80202.

**19** Acute Pediatric Emergencies — Vail, Colorado. Speaker: Eugene Klenk, MD. 2 hours Colorado Medical Society Category 1 and AAFP prescribed credits. Contact Martin J. Rubinowitz, The Denver Clinic, 701 E. Colfax Ave., Denver, Colorado 80202.

**19-20** Vascular Surgery 1983, Current State of the Art — (International Vascular Symposium). 7:30 a.m. to 5:00 p.m., The New York Hilton at Rockefeller Center, 53rd Street at Sixth Ave., New York, NY. Tuition: \$300 for practicing physicians and \$200 for fellows, residents, nurses and technologists. Contact Ann J. Boehme, Continuing Education Coordinator, Long Island Jewish-Hillside Medical Center, New Hyde Park, New York 11042. (212) 470-2114.

**20** Myocardial Infarction, Current Trends in Management — Colorado State University, Ft. Collins, Colorado Program: Northern Colorado Cardiovascular Symposium, 1983. Sponsor: Cardiovascular Associates of Ft. Collins, PC. Fee: \$50 for practicing physicians, \$30 for physicians in training, nurses and paramedical personnel. Contact: The Office of Conferences and Institutes, Colorado State University, Ft. Collins, Colorado 80523. Phone: (303) 491-6222.

**21** Acute Cardiopulmonary Care, Advances and Controversies — Los Angeles. 6 hours AMA Category 1 and 6 hours pending by the California Chapter. Location: Room 13-105, Center for Health Sciences, UCLA. Fee: \$105 for physicians, \$78.75 for faculty UCSM. Contact Health Sciences, UCLA Extension, PO Box 24901, Los Angeles, California 90024. Phone: (213) 825-7257.

**21-22** The 12th Annual Leo G. Rigler Radiology Symposium, Ultrasound in Medicine, Current Advances — Los Angeles, California, Factor Building Auditorium, UCLA. Fee: \$175 for physicians, \$135 for technologists and \$131 for UCSM faculty. 12 hours credit AMA Category 1. Contact Health Sciences, UCLA Extension, PO Box 24901, Los Angeles, California 90024. Phone: (213) 825-7257.

**25** Acute and Chronic Disorders Due to Farm Chemicals — Julesburg, Colorado. Speaker: Daniel Teitelbaum, MD. 2 hours Colorado Medical Society Category 1 and AAFP prescribed credit. Contact Martin J. Rubinowitz, The Denver Clinic, 701 East Colfax Ave., Denver, Colorado 80202.

## June

**1** Inner Experiences in the Infant's Adaptive Organization — University of Colorado Health Science Center, Psychiatric Clinic, Denver, Colorado. Presenter: Louis Sander, MD, Professor of Child Psychiatry, UCHSC. Contact Sylvia Bowen, Colorado Child and Adolescent Psychiatric Society, 8674 W. Rice Ave., Littleton, Colorado 80123. Phone: (303) 979-6310.

**6-10** Clinical Decision Making in Alcoholism and Drug Abuse — New York, New York. Smithers Physicians' Education Program. Contact Andrew J. Gordon, Ph.D, Smithers Alcoholism Treatment and Training Center, St. Luke's Roosevelt Hospital Center, 428 W. 59th St., New York, NY 10019. Phone: (212) 554-6725.

**8** New Modalities in the Treatment of Congestive Heart Failure — Salida, Colorado. Speaker: J. William Richardson, MD. 2 hours AMA Category 1 and AAFP prescribed credit. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 E. Colfax Ave., Denver, Colorado 80203.

**8** Newer Drugs in the Treatment of Cardiovascular Disease — Alamosa, Colorado. 12:00 noon. Speaker J. William Richardson, MD. 2 hours AMA Category 1 and AAFP prescribed credit. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 E. Colfax Ave., Denver, Colorado 80203.

**8-10** 8th Annual Conference on Clinical Application of Hyperbaric Oxygen — Long Beach, California. Contact Michael B. Strauss, MD, Program Chairman, Baromedical Department, Memorial Hospital Medical Center, 2801 Atlantic Ave., Long Beach, California 90801. Phone: (213) 595-3613.

**13-18** 30th Annual Family Practice Review — Estes Park, Colorado, YMCA Conference Center. 30 hours AMA Category 1 and AAFP prescribed credit. Contact The Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 E. 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**18-19** Ender Nailing, An Intensive Motor Skills "Hands-On" Course — Davis California. 13 hours credit. Contact Wanda Ransdell, Office of Continuing Medical Education, TB-150, University of California School of Medicine, Davis, California 95616. Phone: (916) 752-0328.

**19-21** Dopplercardiology Course — The Hague, Netherlands. (Just before 5th Echocardiology Symposium) Contact S. J. Goldberg, MD, Course Director, PO Box 13689, Tucson, Arizona 85732. Phone: (602) 626-7482.

**22-24** 6th Annual Black Hills Seminar in Clinical Pediatrics — Sylvan Lake Resort, Custer, South Dakota. Sponsored by the Department of Pediatrics and Adolescent Medicine, University of South Dakota School of Medicine. Contact Lawrence R. Wellman, MD, Program Coordinator, Department of Pediatrics, University of South Dakota, School of Medicine, 1100 S. Euclid, PO Box 5039, Sioux Falls, South Dakota 57117. Phone: (605) 333-7178.

**23-28** Head and Neck Cancer, Current Ablation and Reconstruction Technique — Davis, California. 30 hours credit. Contact the Office of Continuing Medical Education, School of Medicine, TB-150, University of California, Davis, California 95616. Phone: (916) 752-0328.

## PROFESSIONAL OPPORTUNITIES

FOR SALE: WELL-ESTABLISHED MEDICAL PRACTICE. SUITABLE FOR INTERNAL MEDICINE OR FAMILY PRACTICE. ALL MEDICAL RECORDS AND EQUIPMENT INCLUDED. WILL INTRODUCE. EASY TERMS. LOCATED SOUTH DENVER AREA CLOSE TO PORTER AND SWEDISH HOSPITALS. L. SCOTT FRANK, MD. 2090 S. DOWNING ST., DENVER, CO 80210 (303) 778-0914.

1282-6-6b

PARTNER WANTED: With established practice to join family physician with large practice in central Denver downtown clinic. No OB or Ped. No investment (may buy in if desired.) Share income, expenses and considerable time off. (303) 293-2007.

282-1-2b.

FAMILY PRACTICE or General Practice Physician for Scenic "Rural" Alaska. Challenging and unique position in a 28 bed hospital serving a 40,000 sq. mile area. Out-patient clinic and village travel. Send CV to: Bristol Bay Area Hospital, PO Box 10235, Dillingham, AK 99576 (907) 842-5201. Contact Cindy Ballard or Dave Ingraham, MD.

383-1-1b.

UNIVERSITY OF WYOMING, STUDENT HEALTH CENTER. The Student Health Service will have an opening for a full time physician on July 1, 1983. The physician must be Board Certified in either Internal Medicine or Family Practice and have approved residency training. Applicant must be licensed in the State of Wyoming and have at least two years of primary care experience. Physician to join three full time and three part time physicians to care for 10,000 students on the campus at Laramie, Wyoming. The Student Health Service has its own laboratory, x-ray, pharmacy and infirmary. Salary commensurate with qualifications and experience. The University of Wyoming is an Equal Opportunity/Affirmative Action Employer. Send CV to:

Dale C. Brentlinger, MD  
Director Student Health Service  
University of Wyoming  
University Station Box 3068  
Laramie, Wyoming 82071

383-1-1b.

(Continued from p. 127.)  
cost-saving potential while providing quality care from those which do not, and

**Whereas**, the foremost duty of physicians is ensuring that standards of excellence in medical care are consistently upheld, and

**Whereas**, physicians must share in the responsibility for delivering quality medical care in the most cost efficient manner, therefore be it

**Resolved**, that the Colorado Medical Society consider the following concepts as potential cost-savings mechanisms insofar as they either promote, uphold, or do not compromise quality of care:

1. Utilization review — prospective pre-admission review for elective procedures and admissions, and concurrent review — when conducted under the auspices of physicians and using standards that are developed by physicians to promote quality and not solely cost reduction.

2. Case management, where the physician-patient relationship is strengthened and the physician — the best qualified individual — is in the position to determine what services are necessary and when.

3. Ambulatory surgery for elective procedures and ambulatory medical care including pre-admission testing on an elective basis, when not instituted as a mandatory measure, since some evidence supports the finding that excellence in quality of care may be maintained.

4. Alternative delivery systems, when made available as an element of a pluralistic medical delivery system which includes traditional fee-for-service medicine, and where physician remuneration mechanisms do not allow for conflict of interest in decisions regarding patient care.

5. Physician education, when incorporated into an overall program that integrates the concepts of cost-awareness and cost-reduction into the concept of maintaining excellence in medical care.

6. Risk sharing, where the incentives are appropriately structured so as neither to compromise quality medical care, nor foster conflict of interest.

7. Exploring the possibility of expanding benefits for care in alternative settings for terminal and convalescent patients.

8. Recipient cost-sharing (co-payments and deductibles) under circumstances of private insurance, be it further

**Resolved**, that the Colorado Medical Society opposes implementation of the following measures until they have demonstrated effectiveness in reducing costs and potential for upholding quality medical care:

1. Retrospective denial of reimbursement, when it has no connection with standards of care, and serves only as a punitive behavior modification device.

2. Mandatory second opinion programs, since the evidence does not support its effectiveness in reducing costs or maintaining quality.

3. Retroactive recall of reimbursement, when reviews, conducted subsequent to reimbursement, result in a demand that the payment be returned, and where neither the physician nor patient (where appropriate) had been notified at the time of payment that the specific services had been referred for review; and be it further

**Resolved**, that the Colorado Medical Society takes no position on the following:

1. Recipient cost-sharing by indigent patients.

# An added complication... in the treatment of bacterial bronchitis\*

## Brief Summary Consult the package literature for prescribing information.

**Indications and Usage:** Cefaclor\* (cefaclor, Lilly) is indicated in the treatment of the following infections when caused by susceptible strains of the designated microorganisms.

Lower respiratory infections, including pneumonia caused by *Streptococcus pneumoniae* (*Streptococcus pneumoniae*), *Haemophilus influenzae*, and *S. pyogenes* (group A beta-hemolytic streptococci). Appropriate culture and susceptibility studies should be performed to determine susceptibility of the causative organism to Cefaclor.

**Contraindication:** Cefaclor is contraindicated in patients with known allergy to the cephalosporin group of antibiotics.

**Warnings:** IN PENICILLIN-SENSITIVE PATIENTS, CEPHALOSPORIN ANTIBIOTICS SHOULD BE ADMINISTERED CAUTIOUSLY. THERE IS CLINICAL AND LABORATORY EVIDENCE OF PARTIAL CROSS-ALLERGICITY OF THE PENICILLINS AND THE CEPHALOSPORINS AND THERE ARE INSTANCES IN WHICH PATIENTS HAVE HAD REACTIONS, INCLUDING ANAPHYLAXIS, TO BOTH DRUG CLASSES.

Antibiotics, including Cefaclor, should be administered cautiously to any patient who has demonstrated some form of allergy, particularly to drugs.

Pseudomembranous colitis has been reported with virtually all broad-spectrum antibiotics (including macrolides, semisynthetic penicillins, and cephalosporins); therefore, it is important to consider its diagnosis in patients who develop diarrhea in association with the use of antibiotics. Such colitis may range in severity from mild to life threatening.

Treatment with broad-spectrum antibiotics alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is one primary cause of antibiotic-associated colitis.

Mild cases of pseudomembranous colitis usually respond to drug discontinuance alone. In more severe cases, management should include sigmoidoscopy, appropriate bacteriologic studies, and fluid, electrolyte, and protein supplementation. When the colitis does not improve after the drug has been discontinued, or when it is severe, oral vancomycin is the drug of choice for antibiotic-associated pseudomembranous colitis produced by *C. difficile*. Other causes of colitis should be ruled out.

**Precautions:** General Precautions—If an allergic reaction to Cefaclor occurs, the drug should be discontinued, and, if necessary, the patient should be treated with appropriate agents, e.g., pressor amines, antihistamines, or corticosteroids.

Prolonged use of Cefaclor may result in the overgrowth of nonsusceptible organisms. Careful observation of the patient is essential. If superinfection occurs during therapy, appropriate measures should be taken.

Positive direct Coombs' tests have been reported during treatment with the cephalosporin antibiotics. In hematologic studies or in transfusion cross-matching procedures when antiglobulin tests are performed on the minor side or in Coombs' testing of newborns whose mothers have received cephalosporin antibiotics before parturition, it should be recognized that a positive Coombs' test may be due to the drug.

Cefaclor should be administered with caution in the presence of markedly impaired renal function. Under such conditions, careful clinical observation and laboratory studies should be made because safe dosage may be lower than that usually recommended.

As a result of administration of Cefaclor, a false-positive reaction for glucose in the urine may occur. This has been observed with Benedict's and Fehling's solutions and also with Clinistix® tablets but not with Test-Tape® (Glucose Enzymatic Test Strip, USP, Lilly).

Broad-spectrum antibiotics should be prescribed with caution in individuals with a history of gastrointestinal disease, particularly colitis.

**Usage in Pregnancy—Pregnancy Category B**—Reproduction studies have been performed in mice and rats at doses up to 12 times the human dose and in ferrets given three times the maximum human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Cefaclor. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

**Nursing Mothers**—Small amounts of Cefaclor have been detected in mother's milk following administration of single 500 mg doses. Average levels were 0.18, 0.20, 0.21, and 0.16 mcg/ml at two, three, four, and five hours respectively. Trace amounts were detected at one

## Some ampicillin-resistant strains of *Haemophilus influenzae*—a recognized complication of bacterial bronchitis\*—are sensitive to treatment with Cefaclor.<sup>1,6</sup>

In clinical trials, patients with bacterial bronchitis due to susceptible strains of *Streptococcus pneumoniae*, *H. influenzae*, *S. pyogenes* (group A beta-hemolytic streptococci), or multiple organisms achieved a satisfactory clinical response with Cefaclor.<sup>7</sup>

# Cefaclor®

## Cefaclor

Pulvules®, 250 and 500 mg

hour. The effect on nursing infants is not known. Caution should be exercised when Cefaclor\* (cefaclor, Lilly) is administered to a nursing woman.

**Usage in Children**—Safety and effectiveness of this product for use in infants less than one month of age have not been established.

**Adverse Reactions:** Adverse effects considered related to therapy with Cefaclor are uncommon and are listed below. Gastrointestinal symptoms occur in about 2.5 percent of patients and include diarrhea (1 in 70).

Symptoms of pseudomembranous colitis may appear either during or after antibiotic treatment. Nausea and vomiting have been reported rarely.

**Hypersensitivity reactions** have been reported in about 1.5 percent of patients and include morbilliform eruptions (1 in 100), Pruritus, urticaria, and positive Coombs' tests each occur in less than 1 in 200 patients. Cases of serum sickness-like reactions (erythema multiforme or the skin manifestations accompanied by arthralgia/arthritis and, frequently, fever) have been reported. These reactions are apparently due to hypersensitivity and have usually occurred during or following a second course of therapy with Cefaclor. Such reactions have been reported more frequently in children than in adults. Signs and symptoms usually occur a few days after initiation of therapy and subside within a few days after cessation of therapy. No serious sequelae have been reported. Antihistamines and corticosteroids appear to enhance resolution of the syndrome. Cases of anaphylaxis have been reported, half of which have occurred in patients with a history of penicillin allergy.

Other effects considered related to therapy included eosinophilia (1 in 50 patients) and genital pruritus or vaginitis (less than 1 in 100 patients).

**Causal Relationship Uncertain**—Transient abnormalities in clinical laboratory test results have been reported. Although they were of uncertain etiology, they are listed below to serve as alerting information for the physician.

**Hepatic**—Slight elevations of SGOT, SGPT, or alkaline phosphatase values (1 in 40).

**Hematologic**—Transient fluctuations in leukocyte count, predominantly lymphocytosis occurring in infants and young children (1 in 40).

**Renal**—Slight elevations in BUN or serum creatinine (less than 1 in 500) or abnormal urinalysis (less than 1 in 200).

(051782R)

\*Many authorities attribute acute infectious exacerbations of chronic bronchitis to either *S. pneumoniae* or *H. influenzae*.

**Note:** Cefaclor is contraindicated in patients with known allergy to the cephalosporins and should be given cautiously to penicillin allergic patients.

Penicillin is the usual drug of choice in the treatment and prevention of streptococcal infections, including the prophylaxis of rheumatic fever. See prescribing information.

## 1983 Physicians' Directory

#### Brief Prescribing Information

**CONTRAINDICATIONS:** Patients with severe hypertension, severe coronary artery disease, and in patients on MAO inhibitor therapy, narrow-angle glaucoma, urinary retention, peptic ulcer, during an asthmatic attack.

**Hypersensitivity:** Contraindicated in patients with hypersensitivity or idiosyncrasy to sympathomimetic amines or phenanthrene derivatives.

**Nursing Mothers:** Contraindicated because of the higher than usual risk for infants from sympathomimetic amines.

**WARNINGS:** Use judiciously and sparingly in patients with hypertension, diabetes mellitus, ischemic heart disease, increased intraocular pressure, hyperthyroidism, or prostatic hypertrophy. May produce CNS stimulation and convulsions or cardiovascular collapse with accompanying hypotension.

Use with caution in patients with increased intraocular pressure, cardiovascular disease, hypertension or in patients with a history of bronchial asthma. Do not exceed recommended dose.

**Use in Elderly:** The elderly (60 years and older) are more likely to have adverse reactions to sympathomimetics. Overdosage in this age group may cause hallucinations, convulsions, CNS depression and death.

**PRECAUTIONS: General:** Should be used with caution in patients with diabetes, hypertension, cardiovascular disease and hyperreactivity to epinephrine. The antihistaminic may cause drowsiness and ambulatory patients who operate machinery of motor vehicles should be cautioned accordingly.

**Information for Patients:** Antihistamines may impair mental and physical abilities required for the performance of potentially hazardous tasks, such as driving a vehicle or operating machinery, and mental alertness in children.

**Drug Interactions:** MAO inhibitors and beta adrenergic blockers increase the effect of sympathomimetics. Sympathomimetics may reduce the antihypertensive effects of methyldopa, mecamylamine, reserpine and veratrum alkaloids. Concomitant use of antihistamines with alcohol, tricyclic antidepressants, barbiturates and other CNS depressants may have an additive effect.

**Pregnancy Category C:** Animal reproduction studies have not been conducted with NOVAFED A capsules. It is also not known whether NOVAFED A capsules can cause fetal harm when administered to a pregnant woman or can affect reproduction capacity. NOVAFED A capsules may be given to a pregnant woman only if clearly needed.

**Nursing Mothers:** Pseudoephedrine is contraindicated in nursing mothers because of the higher than usual risk for infants from sympathomimetic amines.

**ADVERSE REACTIONS:** Hyperreactive individuals may display epinephrine-like reactions such as tachycardia, palpitations, headache, dizziness, or nausea. Patients sensitive to antihistamines may experience mild sedation. Sympathomimetic drugs have been associated with certain untoward reactions including fear, anxiety, tenseness, restlessness, tremor, weakness, pallor, respiratory difficulty, dysuria, insomnia, hallucinations, convulsions, CNS depression, arrhythmias, and cardiovascular collapse with hypotension.

Possible side effects of antihistamines are drowsiness, restlessness, dizziness, weakness, dry mouth, anorexia, nausea, headache, nervousness, blurring of vision, heartburn, dysuria and very rarely dermatitis. Patient idiosyncrasy to adrenergic agents may be manifested by insomnia, dizziness, weakness, tremor or arrhythmias.

**OVERDOSAGE:** Acute overdosage with NOVAFED A capsules may produce clinical signs of CNS stimulation and variable cardiovascular effects. Pressor amines should be used with great caution in the presence of pseudoephedrine. Patients with signs of stimulation should be treated conservatively.

**DOSAGE AND ADMINISTRATION:** One capsule every 12 hours. Do not give to children under 12 years of age.

**CAUTION:** Federal law prohibits dispensing without prescription.

MERRELL DOW PHARMACEUTICALS INC.

# Prescription relief For the wet symptoms of allergies...

## Novafed<sup>®</sup> Capsules

each capsule contains pseudoephedrine hydrochloride 120 mg, chlorpheniramine maleate 8 mg

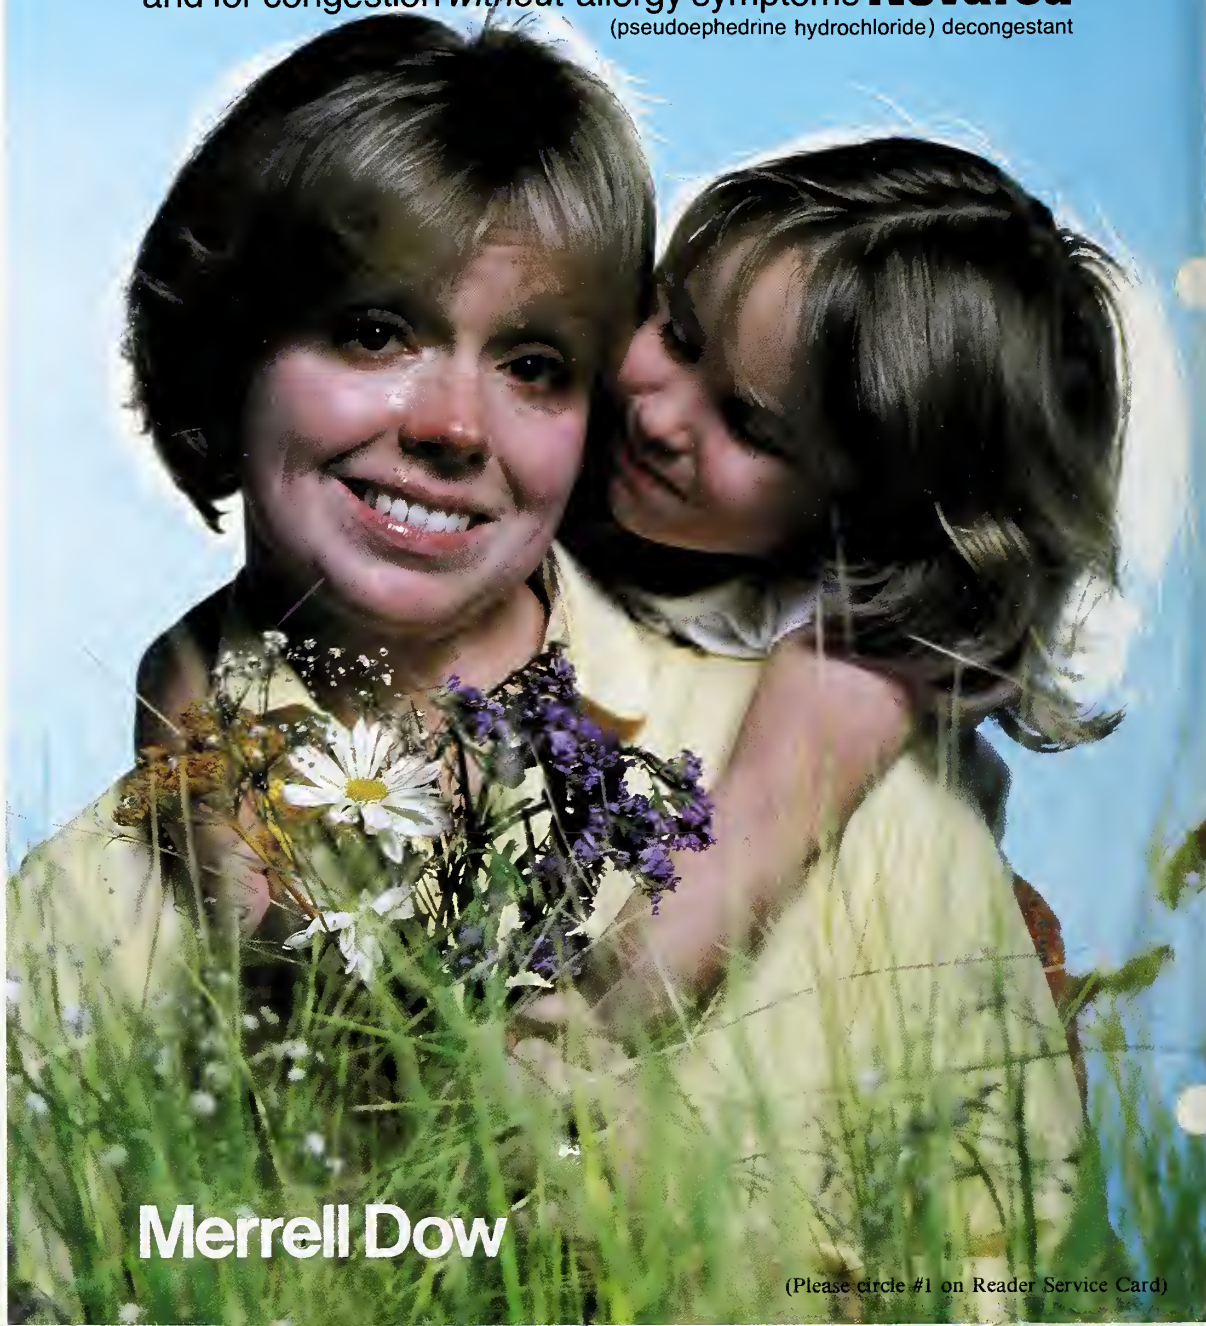

(also available in liquid forms)

Controlled-release decongestant plus antihistamine

## Works for 12 full hours

- stops runny nose with decongestant
- relieves allergy symptoms with antihistamine
- dries watery eyes as a result

and for congestion *without* allergy symptoms **Novafed<sup>®</sup>**  
(pseudoephedrine hydrochloride) decongestant

## Merrell Dow

(Please circle #1 on Reader Service Card)

When mild  
to moderate pain  
is a side effect  
of "Fitness"

**RUFEN<sup>®</sup>**  
(ibuprofen)

measures up...  
at a reasonable  
cost!

**A Single-Entity Pain Reliever  
As-Good-As or Better-Than Codeine  
Combinations**

"...particularly effective in soft tissue disorders including sports injuries,"<sup>1</sup> Rufen stops pain at the site of injury and inflammation, not at the level of central perception. There is no dulled sensorium, no special need for warnings about driving or cautions about use of machinery. Your patient gets fast, effective pain relief...potent anti-inflammatory action...excellent tolerance...*plus* the exceptional economy that only Rufen offers. Next time one of your patients asks for pain relief, let Rufen show you how it measures up.

**Boots Pharmaceuticals, Inc.**  
Shreveport, LA 71106  
**Pioneers in medicine for the family**

See next page for brief summary of prescribing information.

# Measure RUFEN® (ibuprofen) against "standard" mild to moderate pain

# Measure RUFEN® (ibuprofen) against any mild to moderate pain

Dental pain and episiotomy pain are predictable, reproducible "standards" that make possible objective comparisons of effectiveness of different analgesic agents.

- Measured against 15, 30 and 60 mg doses of codeine phosphate in a double-blind study of 287 patients, 400-mg doses of ibuprofen proved "significantly better than codeine on almost all pain intensity, degree of relief and duration of analgesia parameters."<sup>2</sup>
- Measured against a propoxyphene-acetaminophen combination for pain relief after 3rd molar extractions, ibuprofen proved equally effective and caused fewer side effects. Ibuprofen was associated with faster recovery, evidenced by more rapid reduction of trismus and return to normal function.<sup>3</sup>
- Measured against post-episiotomy pain in 30 patients, "ibuprofen was effective in treating the swelling as well as pain...during the first and worst days. Therefore, it is not only the analgesic but also the anti-inflammatory effect of ibuprofen that are the beneficial factors..."<sup>4</sup>

## RUFEN

- single-entity, peripheral-acting analgesia
- powerful treatment of both pain and inflammation
- better tolerated than aspirin
- no narcotic risk, red tape, records

- matchless economy in a modern NSAID

## Acetaminophen + codeine combinations

- combined drugs act partly through central opioid pathways
- virtually no treatment of the inflammatory component
- combined side effects of two drugs — warning required about driving or operating machinery; possible respiratory depression with alcohol, tranquilizers, other common medications
- narcotic precautions required

## And Rufen® Measures Up Best

### RUFEN® (ibuprofen) Tablets

**INDICATIONS AND USAGE:** Treatment of signs and symptoms of rheumatoid arthritis and osteoarthritis during acute flares and in the long-term management of these diseases. Safety and effectiveness have not been established for Functional Class IV rheumatoid arthritis.

**Relief of mild to moderate pain.** Treatment of primary dysmenorrhea.

**CONTRAINDICATIONS:** Patients hypersensitive to ibuprofen, or with the syndrome of nasal polyps, angio-edema and bronchospastic reactivity to aspirin or other nonsteroidal anti-inflammatory drugs (see WARNINGS).

**WARNINGS:** Anaphylactoid reactions have occurred in patients hypersensitive to aspirin (see CONTRAINDICATIONS). Peptic ulceration and gastrointestinal bleeding, sometimes severe, have been reported. Peptic ulceration, perforation, or gastrointestinal bleeding can end fatally; however, an association has not been established. Rufen should be given under close supervision to patients with a history of upper gastrointestinal tract disease, and only after consulting the ADVERSE REACTIONS.

In patients with active peptic ulcer and active rheumatoid arthritis, nonulcerogenic drugs, such as gold, should be attempted. If Rufen must be given, the patient should be under close supervision for signs of ulcer perforation or gastrointestinal bleeding.

**PRECAUTIONS:** Blurred and/or diminished vision, scotomata, and/or changes in color vision have been reported. If developed, discontinue Rufen and administer an ophthalmologic examination.

Fluid retention and edema have been associated with Rufen; caution should be used in patients with a history of cardiac decompensation.

Rufen can inhibit platelet aggregation and prolong bleeding time. Use with caution in patients with intrinsic coagulation defects and those taking anticoagulants.

Patients should report signs or symptoms of gastrointestinal ulceration or bleeding, blurred vision or other eye symptoms, skin rash, weight gain or edema.

To avoid exacerbation of disease or adrenal insufficiency, patients on prolonged corticosteroid therapy, this therapy should be tapered slowly when adding Rufen.

**DRUG INTERACTION:** Coumarin-type anticoagulants. The physician should be cautious when administering Rufen to patients on anticoagulants.

**Aspirin.** Concomitant use may decrease Rufen blood levels.

**PREGNANCY AND NURSING MOTHERS:** Rufen should not be taken during pregnancy nor by nursing mothers.

**ADVERSE REACTIONS:** Incidence greater than 1%. **Gastrointestinal:** The most frequent adverse reaction is gastrointestinal (4 to 16%). Includes nausea\*, epigastric pain\*, heartburn\*, diarrhea, abdominal distress, nausea and vomiting, indigestion, constipation, abdominal cramps or pain, fullness of GI tract (bloating and flatulence). **Central Nervous System:** dizziness\*, headache, nervousness. **Dermatologic:** rash\* (including maculopapular type), pruritus. **Special Senses:** tinnitus. **Metabolic:** decreased appetite, edema, fluid retention. Fluid retention generally responds promptly to drug discontinuation (see PRECAUTIONS). \*Incidence 3% to 9%.

**Incidence less than 1 in 100. Gastrointestinal:** gastric or duodenal ulcer with bleeding and/or perforation, hemorrhage, melena. **Central Nervous System:** depression, insomnia, confusion, emotional lability, somnolence, aseptic meningitis with fever and coma. **Dermatologic:** vesiculobullous eruptions, urticaria, erythema multiforme, Stevens-Johnson syndrome and alopecia. **Special Senses:** hearing loss, amblyopia (blurred and/or diminished vision, scotomata and/or changes in color vision) [see PRECAUTIONS]. **Hematologic:** neutropenia, agranulocytosis, aplastic anemia, hemolytic anemia (sometimes Coombs' positive), thrombocytopenia with or without purpura eosinophilia, decreases in hemoglobin and hematocrit. **Cardiovascular:** congestive heart failure in patients with marginal cardiac function, elevated blood pressure. **Allergic:** syndrome of abdominal pain, fever, chills, nausea and vomiting, anaphylaxis, bronchospasms (see CONTRAINDICATIONS). **Renal:** acute renal failure in patients with preexisting significantly impaired renal function, decreased creatinine clearance, polyuria, azotemia, cystitis, hematuria. **Miscellaneous:** dry eyes and mouth, gingival ulcers, rhinitis.

**Causal relationship unknown. Gastrointestinal:** pancreatitis. **Central Nervous System:** paresthesias, hallucinations, dream abnormalities, pseudotumor cerebri. **Dermatologic:** toxic epidermal necrolysis, photo-allergic skin reactions. **Special Senses:** conjunctivitis, diplopia, optic neuritis. **Hematologic:** bleeding episodes. **Allergic:** serum sickness, lupus erythematosus syndrome, Henoch-Schönlein vasculitis. **Endocrine:** gynecomastia, hypoglycemia. **Cardiovascular:** arrhythmias (sinus tachycardia, bradycardia, and palpitations). **Renal:** renal papillary necrosis.

**OVERDOSAGE:** Acute overdosage, the stomach should be emptied. Rufen is acidic and excreted in the urine, alkaline diuresis may benefit.

**DOSAGE AND ADMINISTRATION:** Rheumatoid arthritis and osteoarthritis, including flareups of chronic disease: Suggested dosage 400 mg t.i.d. or q.i.d.

**Dysmenorrhea:** 400 mg every 4 hours as necessary.

Mild to moderate pain: 400 mg every 4 to 6 hours as necessary for the relief of pain. Do not exceed 2,400 mg per day.

**CAUTION:** Federal law prohibits dispensing without prescription.

## Notes:

The term of each President began at the Annual Meeting in the year accompenyng his name and expired at the next ensuing Annual Meeting except as otherwise indicated.

(1) Membership figures, except the two years for which records are missing, include Active, Honorary and Associate Members and represent totals as of the opening date of each Annual Meeting until 1928. Beginning in 1929 the figures represent totals as of August 31, the end of the Society's fiscal year.

In 1968 the end of the Society's fiscal year was changed to July 31; beginning in 1969 membership figures represent totals as of July 31.

(2) Dr. Thecker resigned the presidency early in 1878 due to illness and was immediately succeeded by Dr. Dodge, Vice President.

(3) Dr. McNeught held over an additional year due to establishment of the President-Elect system, whereby Dr. Spencer and succeeding Presidents took office one year after their respective elections.

(4) Dr. Milligen resigned the presidency December 27, 1957, due to illness and was immediately succeeded by Dr. Wiley, Vice President.

## MILESTONES OF THE COLORADO MEDICAL SOCIETY

1871	Sept. 19	Organized as Colorado Territorial Medical Society with 25 charter members from eight towns.
1872	May 7	Affiliated with American Medical Association.
1875	July 7	Incorporated as the Colorado Territorial Medical Society.
1888	Oct. 31	Reorganized and reincorporated as the Colorado State Medical Society (Colorado Territory became the State of Colorado August 1, 1876.)
1902	June 25	House of Delegates created to conform with reorganization of American Medical Association; reaffiliated with AMA; 15 county and district medical societies chartered as official components.
1903	Oct. 8	"Colorado Medicine" founded as Society-owned Journal; first issue published November 1, 1903. Previous Annual Transactions discontinued three years later.
1922	May	"Medical Coloradoana," a jubilee volume, published to celebrate Society's semi-centennial.
1926	Jan. 1	"Colorado Medicine" became official journal of the Wyoming State Medical Society.
1929	June 1	Full-time Executive Secretary employed. Semiannual Midwinter Postgraduate Clinic established. Name changed later to Mid-winter Clinics, later still to Colorado Winter Clinics and now name is Interim Meeting.
1936	Aug. 3	Society established the Colorado Medical Foundation.
1938	Jan. 1	Name of Journal changed from "Colorado Medicine" to "Rocky Mountain Medical Journal," which became simultaneously official journal for Utah State Medical Association.
1944	Aug. 1	"Rocky Mountain Medical Journal" became official journal for the New Mexico Medical Society. Reorganization and wide expansion of activities authorized in 1946, completed. Included establishment of "Board of Supervisors" as nation's first public medical self-discipline system, name later changed to "Grievance Committee"; "Code of Cooperation," nation's first public medical-hospital-press-radio code, authorized.
1948	Jan. 1	"Rocky Mountain Medical Journal" became official journal of the Montana Medical Association.
1955	Feb.	Semiannual meetings of House of Delegates inaugurated, at Mid-winter Clinical Sessions.
1958	Dec. 31	Society attained third AMA Delegate by exceeding 2,000 active members.
1959	Jan. 1	"Rocky Mountain Medical Journal" became official journal of the Nevada State Medical Association, the sixth participating state.
1960		Inaugurated Administrative Council structure, eliminating rapidly growing and loosely coordinated Committee activities, under five Administrative Councils, expanded to six Councils in 1968. A seventh Council was added in 1972.
1961	Oct-Dec	Corporate title changed to "Colorado Medical Society"; Society purchased, remodeled, and moved Executive Office into 1809 E. 18th Avenue, Denver, as permanent home office building.
1967		Enlarged the Board of Trustees and amended the By-Laws to assure state-wide representation on the Board.
1968		Created a Specialty Office within the Executive Office to serve medical specialty organizations in Colorado.
1970	June 13	Colorado Foundation for Medical Care was created at a special meeting of the House of Delegates.
	Sept.	100th Annual Session celebrated the Society's Centennial.
1973	March	Moved Executive Office to Denver Medical Society Building, 1601 E. 19th Avenue, Denver.
1977		Reorganized Board of Trustees to provide representation by geographic distribution. Increased membership of Board of Trustees to 15 members plus President and President-Elect. Implemented Task Force recommendations of Staff reorganization.
1980	Sept.	Name of "Board of Trustees" changed to "Board of Directors."
1981	Sept.	Articles of Incorporation, Constitution, Bylaws and CMS Standing Rules updated to implement Society reorganization. Councils reduced to five.
1982	May	Moved Executive Office to 6825 East Tennessee Avenue, Building 2, Suite 500, Denver.
1982	July	COPIC Trust (CMS sponsored professional liability program) created.

denver, colorado 80206  
telephone 355-8324**

## **Wine of the Month**

### **A Vineyard exclusive!**

**R**ecieve an outstanding wine each month for twelve months. Substantial savings! Same wines bought separately would cost more • The "Winepress" magazine without charge, containing advance notice of tastings, seminars, classes, charter flights, tours, special values, etc. • A guarantee of satisfaction. Full return or exchange privileges • Notice to recipient of membership and first bottle gift-wrapped.

**C**hoose one or more selections for yourself or gifts • Prices quoted below are for one bottle per month for twelve months picked up at The Vineyard. Add twelve dollars for deliveries • For Denver deliveries, add 6½% sales tax; for suburban deliveries, add 3½% sales tax.

- 1** DINNER SELECTION: \$49.00. Table wines of outstanding values. For drinking, not sipping.
- 2** DISCOVERY SELECTION: \$49.00. Unique wines from the four corners of the Globe.
- 3** ALL-AMERICAN SELECTION: \$49.00. California's finest. New taste treats for Coloradoans.
- 4** CLEOPATRA'S PEARLS: \$49.00. All white selection from around the globe.
- 5** GOLDEN OLDIES: \$69.00. Excellent wines that have stood the test of time. Includes some of Europe's and America's finest.
- 6** THE PATRICIAN: \$100.00. A selection of great and even rare wines for the connoisseur.
- 7** ONE FOR TWO: \$29.00. Half bottles of fine imported wines. Just right for two.

# MOUNT AIRY PSYCHIATRIC CENTER

- Operated by the non-profit Mount Airy Foundation; governed by a Board of physicians and laymen.
- Dedicated to serving the mental health of the region and providing hospital facilities for patients who wish to be treated by physicians of their choice.
- Alcohol Treatment Program; Therapeutic Milieu Program; Partial Hospitalization Program; Adolescent Treatment Program; and General Psychiatric Unit.
- Fully accredited; participating Blue Cross Hospital; open staff of over 230 psychiatrists.
- Referrals accepted c/o Medical Director, William W. McCaw, Jr., M.D.
- Accredited by Joint Commission on Accreditation of Hospitals.
- 80th Year—Serving the community since 1903.

4455 E. 12th Ave. • Denver, CO 80220  
Telephone (303) 322-1803

## IS UNCLE SAM TAKING TOO MUCH?

He may be, if you're not

- Taking all the deductions you're entitled to
- Sheltering all the taxable income you can
- Receiving the best tax advice available

# LEGISLATION

## *How do I contact my state legislator?*

Letters to your state senators or representatives may be mailed to either the Senate Post Office or House Post Office, State Capitol Building, 200 East Colfax, Denver, CO 80203.

You may also reach your legislators by calling the Capitol Switchboard at 866-3006. The operator will connect you with a secretary in either the Senate or House offices and you may then leave a message for your legislator to return your call.

## *How do I contact my Congressman?*

Since these addresses and telephone numbers change periodically, we advise you to contact the CMS Government Affairs Division and the staff person will give you the current address or phone number. The Government Affairs Division number is 321-8590, Ext. 213.

## *How do I receive information on bills?*

For the status of a bill, you may call 866-3055 at the State Capitol. If you are interested in obtaining a copy of a bill, you may go to the Bill Room in the basement of the Capitol or call the Government Affairs Division at the Colorado Medical Society.

## *How do I receive a copy of a federal bill?*

The House and Senate maintain their own document rooms to distribute their own legislation. You may obtain your copies by writing either of their document rooms. You should list your bills, resolutions, amendments, reports and public laws in numerical order; limit your request to six items; indicate the number of copies you need. You may request up to three copies of an item, but some bills are limited to a single copy. Be Sure To Attach A Self-Addressed Mailing Label.

House Document Room  
H226  
U.S. Capitol  
Washington, D.C. 20515

Senate Document Room  
S325  
U.S. Capitol  
Washington, D.C. 20510

These offices will not take telephone requests for bills, but you may telephone for the status of a particular bill by calling the House Document Room, (202) 225-3456 or the Senate Document Room, (202) 224-4321.

*How do I obtain information on Council on Legislation meetings, a bill I'm aware of in another state's legislature, how my legislator or Congressman voted on a particular issue, or a vacancy on a health-oriented board or commission, etc.?*

Call the CMS Government Affairs Division: 321-8590, Ext. 213.

340 Birch Street 80758  
332-4811

#### Yuma

Yuma District Hospital  
910 South Main Street 80759  
848-5405

# The Colorado Medical Society Councils and Committees

## Board Committees

### **AMA/CMS Membership Services Committee:**

Will work toward recruitment and retention of members, both to CMS and to the AMA, with goal of achieving additional AMA members to gain CMS a third Colorado Delegate and Alternate to the AMA. Will initiate, review, and recommend any services that may be offered to the membership, such as collection agencies, auto leasing and group insurance. Will review and recommend membership classifications and changes to the Board.

**Building Committee:** Advises CMS Finance Committee and Board of Directors concerning CMS building program.

(The Board Standing Rule states that the Committee shall advise the Executive Vice President concerning management of the Society's headquarters building and advise the Finance Committee and Board concerning proposals for major physical alterations of the building and building management policies.)

**Committee on Committees:** 1981 Bylaws, page 18, Chapter V, Section 6, "The President-Elect shall be Chairman of a Committee on Committees which shall include the President, Immediate Past President, Speaker and Vice Speaker. The Committee on Committees shall make recommendations to the Board of Directors for (a) charges of the Councils and Committees, (b) membership on Councils and Committees to include Council and Committee Chairmen and Council Vice Chairmen, and (c) annual sunset evaluation of all CMS Councils and Committees."

**Confidential Awards Committee:** Confidential membership appointed by Board on recommendation of the President, to recommend nominations to the Board for CMS Certificate of Service and for annual recipient of A. H. Robins Award.

**Executive Committee:** 1980 Bylaws, page 18, Chapter V, Section 5, "There shall be an Executive Committee of the Board of Directors composed of the President, President-Elect, Immediate Past President, Treasurer, and member of the Board of Directors to be selected by the Board of Directors. The Executive Vice President shall serve ex officio without vote on the Executive Committee and on the Board of Directors. The Executive Committee shall act for the Board in emergency or in other unusual situations between meetings of the Board, and shall report all its actions in full at the next regular meeting of the Board, for review and appropriate action by the Board."

**Professional Liability Review Committee:** Shall advise the insurance company and defense attorneys of the liability potential of all claims filed against physicians insured under a CMS sponsored insurance program, and any insurance company insuring a CMS member, if asked to do so. The Committee shall be under the direction of a physician coordinator who will convene three-man specialty panels when the insurance company ascertains that they have sufficient questionable cases for review in that specialty or if requested by involved physicians. Reports of the Committee concerning specific cases shall only be forwarded to the defense attorneys representing the physician and the appropriate insurance company covering that physician. The Committee will make periodic reports to the CMS Board concerning its activities and other matters as may be appropriate. The total Committee shall be comprised of three members from each specialty, appointed by the President of the state specialty group and approved by the Board of Directors of the Colorado Medical Society and the CMS Professional Liability Trust Board of Trustees.

**Public Information Committee:** Responsible for a program of communications between the Society and component and individual members. Provides a forum for open dialogue with the general public as well as factual medical information to the public.

**Public Information Subcommittee: CMS Representatives to the Colorado Code of Cooperation Committee:** CMS representatives are the President, President-Elect, Chairman of the CMS Public Information Committee, and the CMS executive who works with the Public Information Committee. The Colorado Committee maintains and improves relationships between the organizations which participate in the Code. (The Colorado Medical Society initiated the formation of the Colorado Code of Cooperation Committee in 1948 to improve relations between medical organizations and the news media, and to define those relationships in the published Colorado Code of Cooperation and in the Committee's Bylaws.)

**Risk Management Committee:** Directs and coordinates the Risk Management program for the CMS Professional Liability Insurance program. The Committee shall investigate applicants for new membership in the liability insurance program. The Committee shall review on-going medical liability loss data and provide continuing education of physicians in the area of professional liability. The investigative and educational work of the Committee shall be performed by Medical Liability Consultants Program, Inc., under an existing contract with CMS and the CMS Professional Liability Trust.

The Committee shall investigate all charges of poor medical practice, record keeping, or other professional behavior from any source. If such investigation reveals evidence of continuing misbehavior, the Committee, based upon criteria

approved by the Insurance Commissioner's office, shall advise the insurance carrier of the relative risk exposure of that physician. The insurance company may then elect a surcharge, supervision program, or non-renewal of insurance. Decisions of the Risk Management Committee may be appealed to the Board of Directors of the Colorado Medical Society, via the CMS Professional Liability Trust Board of Trustees.

**Special Committee for Negotiations:** Represents CMS in those situations where the Board determines negotiations are necessary, such as Medicaid reimbursement.

## **Councils and Their Committees**

**CMS Standing Rule: Council on Legislation.** "The Council shall represent the Society in all matters pertaining to federal, state and local legislation and legislative bodies. It shall promote the determined policies of the Society with regard to: a) all proposed or pending health-related legislation, b) the formulation of rules and regulations of governmental agencies for implementation of existing laws. The Council shall seek advice and assistance from other appropriate Councils or Committees in arriving at policy recommendations."

Shall continue an active legislative program including increased physician involvement in the Colorado State legislative arena. Also, it shall promote the determined policies of the Society with regard to the nomination of persons friendly to medicine to boards and commissions. It shall invite as many resource persons as possible to weekly Council meetings during legislative sessions and shall continue to encourage physicians to visit the capital. Because 1982 is an election year, there will be a concerted effort to have physicians in all campaigns. The Council will consider some type of educational seminar during the early summer of 1982, and the establishment of an annual trip to Washington D.C. for physicians and key CMS staff.

**CMS Standing Rule: Council on Professional Education.** "The Council shall promote the policies of the Society in all matters concerning undergraduate, graduate and postgraduate medical education."

Shall develop and sponsor programs which provide the following:

1. Educational support services for physicians and for continuing education programs.
2. Educational programs for physicians on clinical and non-clinical topics.
3. Continuing liaison on educational matters with organizations, local, state and national, that are concerned with CME.
4. Close and cooperative working relationships with the University of Colorado School of Medicine on educational matters.

**Accreditation Committee:** Advise Council on policies and procedures governing the Society's program of accreditation for continuing medical education credits. Determine which applicants for accreditation shall be surveyed to determine their eligibility for accreditation. Evaluate findings of survey teams, and determine whether or not applicants are accredited, and if so, for what terms.

**Committee on Medical School Relationships:** Provide CMS representation on University of Colorado School of Medicine Committee on Curriculum and advise on specific educational questions. Cooperate with the School of Medicine Office of Post Graduate Education and Office of Educational Services in planning educational programs.

**Continuing Medical Education Committee:** Function under CMS policy as a committee of the Council on Professional Education.

Determine the needs, goals and objectives of educational events presented by or through the CMS, as established by the Accreditation Council for Continuing Medical Education "Essentials" for accreditation.

Establish and maintain the quality of educational events, presented by or through the CMS, as established by the ACCME "Essentials" for accreditation.

## **Medical Students/Residents Financial Assistance Committee:**

Function under CMS policy as a committee of the Council on Professional Education.

Determine mechanisms in funding, determination of eligibility, and implementation of such support.

**CMS Standing Rule: Council on Professional Relations and Medical Service.** "The Council shall represent the Society in matters regarding our profession and other professions and shall promote Society policies which affect the delivery of health care."

Shall monitor legislative and regulatory developments in health related professions and make appropriate recommendations to the Council on Legislation. Shall recommend policies which affect delivery of health care including emergency medicine systems, vogue therapies rendered by licensed and/or unlicensed persons, and proper levels of access to care for each Colorado community and shall convene CMS/CBA medicolegal panels as indicated.

Shall promote patient education to engage the public's awareness of the cost of medical care including scientifically unproven health care practices.

Shall maintain and increase communication with professional organizations, allied professions, and the Hospital Association toward improving delivery of health care.

**Committee on Emergency Medical Care:** To provide physician supervision and direction over the development of a statewide emergency medical delivery system, in liaison with the State Health Department and Board of Medical Examiners, including use of paraprofessionals, transportation, disaster planning and facility categorization.

**Committee on Mental Health:** Shall work through Council in developing more effective input with the Department of Institutions on pertinent subjects. Cooperates with interested component committees on influencing legislative study committees in its review of Colorado psychiatric care, solicits input and cooperation of the Colorado Psychiatric Association regarding health facilities with treatment programs. Cooperates with other committees which desire advice on matters related to mental health.

**Committee on Pharmacy:** Shall study concerns and problems in the area of clinical pharmacy and make recommendations to the Council. Shall design activities aimed at rectifying deficiencies in physician handling of drugs, especially as that relates to easily abused drugs.

**Physician Health and Rehabilitation Committee:** Administers CMS program for voluntary assistance and treatment of impaired physicians. Will serve as an advocate for physicians' re-entry into or continuation of practice. Shall maintain liaison with CMS Risk Management Committee and with Colorado Board of Medical Examiners. Will publicize non-punitive purpose of Committee to physicians and to allied organizations. Will review potential cases and will assign intervenors as needed to individual physicians, and will monitor all cases. Conducts educational sessions for intervenors.

Board approved Committee structure limits central committee to eight physicians appointed by the President, to be broadly representative geographically by specialty and age, and to include one or two previously impaired physicians.

**Pre-Hospital Care Physician Advisor Committee:** Shall encourage and evaluate the quality of pre-hospital emergency care; study and make recommendations to the membership and State Health Department regarding the development, training and practices of emergency medical technicians and their physician advisors pending approval of the Council and the Board of Directors.

**CMS Standing Rule: Council on Public Health.** "The Council shall promote public health policies of the Society."

Shall continue present efforts to educate the public as to their personal health responsibility, through public and private schools and in public seminars.

**Committee on Environment:** Maintain active interest in and support for programs concerning the environment, including air pollution, water pollution, oil shale development and boom-town health care. Increase CMS membership awareness of environmental problems.

**Committee on Health Education and School Health:** Formulate and promote continuing programs of fundamental public instruction in matters affecting the health of individuals and the general public. Assure that mandated alcohol and drug abuse education programs are implemented in all school districts. With the concurrence of the Council on Public Health and the Council on Legislation encourage the legislature to provide the funding necessary for health education in all school districts as set forth in the Health and Survival Education Act. Study and identify exemplary, innovative programs that provide health services and education in schools. Develop policy statements for the Society regarding school health issues. Monitor the effect of regulations promulgated under the Handicapped Children's Education Act. Cooperate with other organizations concerned with the health of Colorado youth.

**Committee on Maternal and Child Health:** Study and make recommendations to the Council and to the State Health Department regarding care of the medically indigent, high-risk mother and infant, homebirth, free standing clinics below Level I standard. Prevent infant abuse through use of a recognition protocol. Will give attention to early childhood years and will look at alternative birthing centers in hospitals.

**Committee on Medical Aspects of Sports:** Serve as a resource for scholastic and recreational athletics in Colorado. Prepare a uniform injury/accident reporting form, offer clinics on athletic safety and injury prevention for high school coaches and trainers, develop a pool of members who are willing to serve as medical staff at large non-profit athletic events and communicate availability of list to public.

**CMS Standing Rule: Council on Socio-Economics.** "The Council shall identify and evaluate social and economic issues which significantly impact physician reimbursement, practice and management (or administration)."

Also shall recommend and promote policies of CMS regarding insurance regulation, anti-trust regulations, health planning and voluntary cost containment efforts in liaison with appropriate state and federal administrative agencies. Shall continue Private Health Insurance Committee and work toward enactment of legislation to immunize Committee from potential anti-trust litigation.

**Medicaid Task Force Committee:** Shall develop and recommend a revised Medicaid benefit and financing program for the Board's (and Councils') consideration.

**Committee on Medical Care in Correctional Institutions:** Shall develop medical guidelines for correctional facilities in Colorado, act as a review body for those facilities interested in guideline compliance and coordinate Jail Health Project.

**Private Health Insurance Committee:** Oversee and mediate insurance company claims for physicians and insurance companies and others, as submitted to the Committee, especially the propriety of procedures rendered.

### **Colorado Medical Society Committees**

**Finance Committee:** Shall review the Society's financial transactions and condition with the Executive Vice President and shall advise the Board of Directors on all financial questions. "The Treasurer shall be Chairman of the Colorado Medical Society's Finance Committee, and as such shall report on the finances of the Society at Board meetings and to the House of Delegates if requested." — 1980 Bylaws, page 20, Chapter VI, Section 5.f.

Amilu S. Rothhammer, Colorado Springs,  
Chairman

J. Richard Brusenhan, Colorado Springs

Frederick A. Lewis, Jr., Denver

Robert F. Linnemeyer, Grand Junction

Merlin G. Otteman, Fort Collins

John A. Whitesel, Denver

#### **Finance Subcommittee**

**Cochems Trust Fund Committee:** Determines eligibility of physicians to receive assistance under the terms of the Jane Nugent Cochems Trust Fund held by the Colorado National Bank of Denver.

Frederick A. Lewis, Jr., Denver

Amilu S. Rothhammer, Colorado Springs

Merlin G. Otteman, Fort Collins

**Organizational Study Committee:** AM '81 CMS Standing Rules, Chapter 4. Section 11. "There shall be a committee of the Colorado Medical Society to be known as the Organizational Study Committee, consisting of six CMS members, each of whom through past service in the Colorado Medical Society has some special knowledge of the organizational and administrative operations of the Society. With advice from the Committee on Committees, the members of such committee shall be appointed by the President, for staggered terms of three years each. The Speaker of the House shall be an ex officio non voting member of the Committee. With respect to the Articles of Incorporation, the Constitution, the Bylaws and the Standing Rules of this Society, and to amendments to the constitution and bylaws of component societies, this Committee shall 1) be a fact finding and advisory body, 2) make a continuing review of these matters, and 3) report its recommendations to the House of Delegates through the Board. Every five years there shall be a review of

Director Districts and Judicial Councilor Districts by the Organizational Study Committee."

### **CMS Representatives**

**To Colorado Hospital Association:** One CMS member to represent CMS in its relations with CHA Board, to submit quarterly reports to CMS Board.

**To Statewide V. E. Committee:** present CMS in its relations with the Statewide Voluntary Effort Committee.

# Colorado Foundation for Medical Care

The Colorado Foundation for Medical Care was established as a non-profit corporation by the physicians of the Colorado Medical Society in June of 1970. The purposes for which the Foundation was established include:

- The promotion of cost effective and high quality medical care,
- The evaluation and improvement of health care methods and facilities, and
- The development and operation of a statewide peer review system.

The Foundation is governed by a 21 member Board of Directors which is made up of 17 doctors of medicine, 1 doctor of osteopathy, 1 hospital administrator representing the Colorado Hospital Association, 1 representative of the nursing home industry, 1 representative of the Colorado Pharmacal Association and 1 dentist representing the Colorado Dental Association as an ex-officio non-voting member. The Board of Directors set the policy of the Foundation and reviews all Foundation activities to insure that they are carried out in conformation with the policies and the objectives set by the Board. The prime spokesman to the Foundation's physician constituency is Dr. Kenneth A. Platt, Medical Director of the Foundation. Three associate medical directors and two physician consultants provide technical consultation and guidance to the Foundation's non-medical staff. The Foundation is administered by an Executive Vice President, R. G. Bowman, and by an Executive Director, Peter Samac.

The Foundation is divided into five administrative departments (finance and administrative services, regional operations, review programs, data systems and technical support, and program planning and evaluation). The various Foundation review programs are implemented and operated by five regional offices in Denver, Grand Junction, Ft. Collins, Colorado Springs and Pueblo.

A host of committees both statewide and regional which are composed by physicians and other health care professionals provide input regarding local standards of health care and review the Foundation-developed policies, criteria, and review data.

The Foundation's operations are structured to provide for local physician input and involvement in all aspects of the on-going review programs. At the program level programs are professionally directed by physician committees. These committees review the program activities as well as the standards and criteria against which review is done.

Foundation programs now include the following:

1. Review of admissions of Medicaid and Medicare patients to Colorado hospitals for appropriateness of admission and continued stay through the CAP program.

2. Review of quality of care in Colorado's hospitals through the Quality Assurance/Medical Care Evaluation program.
3. Review for medical necessity of Medicaid patients seeking admission to Colorado's long term care facilities through the long term care program.
4. Constructive action with nursing homes identified by the State Department of Health as having a need for assistance in solving quality of care problems.
5. Review of ambulatory care for appropriateness under contract with private insurance companies through the ambulatory peer review program.
6. Review of medical necessity and level of care for patients receiving health care under the Office of Civilian Health and Medical Program of the Uniformed Services (OCHAMPUS).

Foundation review programs are supported by a computerized data system and by the Health Care Standards Committee which is responsible for the development of review criteria and guidelines.

Anyone wishing to obtain further information regarding the Foundation or the Foundation's review activities should contact their local Regional Manager in one of the five regional offices:

# How Much Is Too Much?

With health care costs nationwide soaring over \$300 billion this year and some predictions of a one trillion dollar nationwide health care bill by the 1990's — there's cause for real concern in the health care industry.

And we know this concern is shared by you as well as hospitals, third parties, business, labor and consumers.

This common concern is how to continue to provide quality health care that is affordable.

Now, more than ever, it takes the dedicated cooperation of all of us in the health care field to strive for this goal.

Together we can reach it.

# Colorado Medical Society Auxiliary

## AIMS

The purposes of the Colorado Medical Society Auxiliary as stated in its Bylaws is to "support" the Colorado Medical Society in its program to improve the quality of life through health education and service and to support its component auxiliaries.

In 1979-80 the Auxiliary gave birth to *Health Power*; a statewide project designed to stimulate health awareness and urge the public to assume responsibility for its own health.

Throughout the state the CMS Auxiliary is actively involved in the promotion of good health by programs ranging from CPR education to immunization to scholarships.

The elected and appointed officers and chairmen of CMS Auxiliary have initiated many exciting programs and stand ready to be of assistance to the Colorado Medical Society and its members.

# **PUBLIC INFORMATION GUIDELINES FOR HOSPITALS, PHYSICIANS AND NEWS MEDIA**

## **Colorado Code of Cooperation**

**Media inquiries about patient condition  
are to be directed to:**

**DAY:  
NIGHT:**

Other news media inquiries should be  
directed to the hospital's  
public relations officer:

(Title)

Federal law requires broadcasters to tell  
a person being interviewed if that interview  
is to be broadcast. If in doubt, please ask.

**INFORMATION ABOUT PATIENTS  
SHOULD NOT BE RELEASED  
WITHOUT THE PATIENT'S  
PERMISSION EXCEPT IN CASES OF  
"PUBLIC RECORD."  
(Refer to attached guidelines  
for details)**

Cases of "Public Record" are those reportable to public  
authorities, such as police, coroner, fire or public health  
officer. These commonly include, but are not limited to,  
persons brought to the hospital by authorities, persons  
under arrest or held under police surveillance, alleged  
stabblings, poisonings, shootings, automobile injury,  
burns, assault, bites and unusual industrial accidents.

In cases of "Public Record," the following information  
may be released:

Name, city, marital status, age, sex, occupation and  
employer.

Name of parent may be given for minor or incompe-  
tent. **Exception:** No identity or information that could  
identify the person is to be released for sexual assault  
victims or psychiatric, drug or alcohol abuse patients  
(federal law).

Nature of accident, e.g., auto, fire, shooting, etc., but  
no statement of cause.

General information on nature of injury and condition  
of patient.

## **PATIENT CONDITION:**

**GOOD:** Vital signs, such as pulse, temperature and blood  
pressure are stable and within normal limits. Patient is  
conscious and comfortable. Outlook for recovery is good  
or excellent.

**FAIR:** Vital signs are stable and within normal limits.  
Patient is conscious. Patient is uncomfortable or may  
have minor complications. Favorable outlook.

**SERIOUS:** Acutely ill with questionable outlook. Vital  
signs may be unstable or not within normal limits. A  
chance for improved outlook.

**CRITICAL:** Questionable outlook. Vital signs are  
unstable or not within normal limits. There are major  
complications.

**DEATH:** May be reported by hospital AFTER next of kin  
has been notified or after reasonable effort has been  
made.

Questions about release of information may be directed  
to:

(Hospitals) Colorado Hospital Association, 758-1630  
(Physicians) Colorado Medical Society, 861-1221  
(Physicians) Colorado Society of Osteopathic Medicine,  
322-1752

## **INTRODUCTION**

This guide is an attempt to balance the public's right  
to certain information with hospital, physician and patient  
rights. It should be tempered by sound judgment, recog-  
nition of special circumstances, knowledge of local  
conditions and a generous dose of common sense.

These guidelines were developed by the Colorado  
Code of Cooperation Committee with participation from:

Associated Press  
Colorado Broadcasters Association  
Colorado Department of Health  
Colorado Department of Institutions  
Colorado Medical Society  
Colorado Press Association  
Colorado Hospital Association  
Denver Department of Health and Hospitals  
Denver Medical Society  
The Denver Post  
Metropolitan Denver Hospital Council  
University of Colorado Health Sciences Center  
Colorado Society of Osteopathic Medicine  
Sentinel Newspapers  
Colorado Society for Hospital Public Relations  
Radio-TV News Directors Association

Originally published: 1948

Revised: 1955, 1975, 1980

## **HOSPITALS**

### **COOPERATION**

It is the policy of the Colorado Hospital Association  
to maintain full cooperation with news media and to  
encourage its 105 member hospitals to maintain a similar  
policy. Media people who have difficulty in obtaining basic  
information from hospitals are advised to call the Public  
Relations Director at the Colorado Hospital Association  
at 303 758-1630.

Each hospital should have available at all times an  
authorized spokesman or alternate to answer media

questions. Names of designated spokesmen should be easily available within the hospital and to the news media.

Acknowledging the news media's deadline pressures, hospitals should provide authorized information as rapidly as possible or advise of delays.

## **INFORMATION ABOUT PATIENTS**

News about patients can be divided into two categories: cases not recorded publicly, but thought to be in the general interest and cases of public record.

**INFORMATION ABOUT PATIENTS SHOULD NOT BE RELEASED WITHOUT THE PATIENT'S PERMISSION EXCEPT IN CASES OF "PUBLIC RECORD."**

### **I. USUAL CASES (OTHER THAN PUBLIC RECORD)**

If the patient is conscious and can communicate with the doctor or nurse in charge, the patient should be asked whether he will permit information about his illness to be released. If the patient agrees to allow release of information, it may be released following the same guidelines as for a case of public record. In the case of minors or incompetents, a parent or guardian must consent to release of information. If it is not possible to communicate with the patient, the next of kin may give permission.

If the physician deems it advisable to release information because of jeopardizing the patient's health, information may not be released.

Under ordinary circumstances, acknowledgement of a patient's admission may be made without consent. If a patient specifically requests that the admission not be made public, the decision is left to the hospital administrator, who must recognize that the news media will largely determine the public's interest in the admission.

### **II. CASES OF PUBLIC RECORD**

Cases of "public record" are those reportable to public authorities, such as police, coroner (medically unattended deaths), fire or public health officer. These commonly include, but are not limited to, persons brought to the hospital by authorities, persons under arrest or held under police surveillance, alleged stabbings, poisonings, shootings, automobile injuries, burns, assaults, bites and unusual industrial accidents.

In case of "public record," the following information may be released:

A. Name, city, marital status, age, sex, occupation and employer. Name of parent or guardian may be given for minor or incompetent. **EXCEPTION:** No identity or information that could identify the person is to be released for sexual assault victims, or psychiatric, drug or alcohol abuse patients. No address (except city) is given out for the protection of patients.

B. Nature of Accident or Illness.

A general statement may be made that the patient was injured by automobile, plane crash, explosion, shooting, etc., with no statement as to cause.

**Shooting/Stabbing** — Give general location of the wound. Refer to law enforcement authorities.

**Suicide or attempted suicide** — No identity or information.

**Sexual Assault** — Release no names and make no statement on the nature of the incident, injuries. Condition, age and sex may be given.

**Psychiatric** — No identity or information.

**Battered Children** — Do not discuss possible child abuse. Injuries may be described.

### **STANDARD DEFINITIONS OF PATIENT CONDITION**

Hospitals generally use the following standard definitions of patient condition, reserving the right to amend as necessary:

**GOOD:** Vital signs, such as pulse, temperature, and blood pressure are stable and within normal limits. Patient is conscious and comfortable. His outlook for recovery is good or excellent.

**FAIR:** Vital signs are stable and within normal limits. Patient is conscious. He is uncomfortable or may have minor complications. Favorable outlook.

**SERIOUS:** Acutely ill with questionable outlook. Vital signs may be unstable or not within normal limits. A chance for improved outlook.

**CRITICAL:** Questionable outlook. Vital signs are unstable or not within normal limits. There are major complications; death may be imminent.

**NOTE:** "Vital" according to Dorland's Medical Dictionary, 25th edition (1974), means "necessary to, or pertaining to life."

#### **C. General information on the nature of the injury.**

**Attending Physician** — Spokesman may give the name of the attending physician, unless the physician specifically directs the name not to be released.

**Fractures** — State location only if a limb is involved and if fracture is simple or compound.

**Head/Internal Injuries** — state only head or internal injuries.

**Unconscious** — If patient was unconscious when brought to the hospital it may be stated.

**Poisoning** — Only state that the patient is being treated for suspected poisoning. No speculation on suicide or accident. Poisonous compound may be identified by generic name — such as caustic, cleaning compound, etc., — if it has been firmly established by attending physician.

**Intoxication or Drug Abuse** — No statement.

Transplants and Organ Donors — Nature of the transplant and condition, age and sex of the recipient may be provided. Release of names of recipient and donor requires prior consent. If donor is deceased, name may not be given out without consent of the family.

Burns — It may be stated that a patient is burned and the general location and percent of the body burned. After physician's diagnosis, degree of burns may be given.

**FIRST DEGREE BURN:** Superficial.

**SECOND DEGREE BURN:** Blistered.

**THIRD DEGREE BURN:** All skin layers destroyed.

## DEATHS

News of the death of a patient should not be made public until AFTER the family has been notified. Information on the cause of death must come from the patient's physician, and its release must be approved by a member of the immediate family.

If a death becomes the object of a coroner's or medical examiner's investigation, inquiries as to the cause and circumstances of death should be directed to the appropriate office. In instances other than police or coroner's cases, release of information may be made after all reasonable attempts to notify the family have failed and a reasonable period of time has passed.

The name of the mortician receiving a body may be released. (Refer to "PUBLIC FIGURES" for death of prominent persons.)

While hospitalization is basically a private matter, well-known persons and public figures have to a great extent relinquished their right of privacy.

When public interest exists, the hospital should arrange for periodic medical bulletins, in the early morning, noon, and in the afternoon.

If the person prefers that news of his illness be handled by his own spokesman, the hospital should insure that information relative to the patient's medical condition is provided by an authorized source.

When continuing demands for interviews of a public figure prove detrimental to the patient's well being or disruptive to the welfare of other patients and the staff's functioning, the hospital may limit or prohibit the admission of news media, or confine the coverage to a pool arrangement.

The patient's discharge should be handled with caution. Publicly at this time can have an adverse effect on the patient's condition. His permission should be obtained before time and date of his discharge is announced. He may prefer his departure to be made public after he has gone.

There are times when circumstances create a famous person out of an ordinary citizen (an organ transplant, for example). Under certain circumstances this person may become a public person and give up certain rights to privacy.

In the event of the death of a person of sufficient prominence, the hospital should notify news media after notifying the deceased's family.

## MEDICAL RECORDS

Medical records are private and confidential. Release of medical records is strictly governed by Colorado law. Refer to the Colorado Hospital Association Consent Manual or contact legal counsel.

## LITIGATION

Hospital spokesmen may not release information in situations where the hospital and/or members of the medical or nursing staff are parties to or threatened by litigation, without the advice and consent of legal counsel, including legal counsel for any insurance company involved. Give the news media the name of the hospital attorney for further information.

## EXCLUSIVES

If a reporter, through his own initiative, obtains an exclusive story concerning a hospital, physician or patient, the right to an exclusive will be respected to the extent that the hospital or physician will not take the initiative in giving that story to another news agency. If the hospital or physician is approached on the same story by another agency, they are obliged to release the information to that publication or station as well.

On matters of general news interest, all media shall be given equal access to information.

## PHOTOGRAPHY

When a request is made to photograph a patient in the hospital, such permission will be given only:

— If, in the opinion of the attending physician, the patient's condition will not be jeopardized, and,

— If the patient (or in the case of a minor or incompetent, a parent or guardian) is willing to have photographs taken. The hospital should obtain consent in writing. (See Colorado Hospital Association Consent Manual for sample form.)

Where it is necessary to install or use equipment which could interfere with the normal operation of the hospital or the service to patients, consent must be obtained from the chief administrative officer of the hospital before using such equipment.

## COMMUNITY DISASTERS

Disasters require special handling. When the hospital is handling a large number of victims from a disaster, every attempt should be made to keep the news media informed. When possible, it may be advisable to appoint more than one spokesman for continuous communication. Many hospitals include special procedures in their disaster plans to help avoid disrupting hospital operations. See Pooling under News Media.

## PHYSICIANS

Physicians are Doctors of Medicine (M.D.) or Doctors of osteopathic Medicine (D.O.)

## MEDICAL AND OSTEOPATHIC SOCIETIES

1. The offices of the state and local Societies are available to representatives of the press, radio and televi-

sion to obtain authentic information as promptly as possible. If it is not immediately available, the office will strive to obtain the information or to locate a competent authority from which the news media can obtain it directly.

2. Designated spokesmen of the Societies may be quoted by name in matters of public interest for the purpose of authenticity.

3. It shall be understood that speakers at medical meetings shall be accessible to the news media without prior approval of the Societies. The responsibility for arranging for news media participation of physicians involved in such meetings shall rest with the sponsoring group.

4. Physicians shall not participate in controversial public discussions as spokesmen for the Societies without prior approval. A physician, speaking as an individual, needs no such approval.

#### THE INDIVIDUAL PHYSICIAN

1. The physician should assist the news media as soon as possible or as soon as information is available, consistent with safeguarding the life and health of the patient and respecting the confidential nature of the doctor-patient relationship. Such information should include:

- a. The nature of the injuries or illness, the degree of seriousness, current condition and probable prognosis.
- b. In hospitalized cases, the physician shall cooperate with the hospital designated spokesman.

2. If an individual physician wishes to call a news conference, a reporter or editor, to announce a new or innovative procedure, he may do so and may contact the local professional society or the hospital public relations staff if he desired assistance.

#### MEDICAL SCHOOL

The medical school shall have available at all times spokesmen who are authorized to speak on behalf of the school. It is recognized that frequently the media will have a legitimate interest in the activities and research being conducted by the medical school, and the principles of these guidelines will apply to physicians associated with the teaching institution.

#### NEWS MEDIA

It shall be the responsibility of news media representatives to be fair and accurate in their reporting of all medical and health news. Editors and reporters should make every attempt to request information from authorized health and medical sources. Reporters also have the responsibility to respect a patient's physical, mental and emotional rights to privacy, and to cooperate with health and medical authorities to ensure those rights.

Prior to visiting patient care areas (emergency rooms, patient care rooms, adjacent hallways, surgical and laboratory areas) of a health or medical facility, television camera crews should obtain the consent of the appropriate authority. Television crews should attempt to minimize their presence in order not to interfere with patient care or the efficient operation of the hospital or medical facility.

Health and medical facilities, under certain conditions, e.g. disasters, find it necessary to limit news media coverage and control access. In such situations of intense media interest, the pooling of all news media may be necessary. At that time, the health or medical spokesman may ask news media representatives to choose their own news pool. Six people will be chosen, one representing each news media as follows: wire service; radio; television reporter; television photographer; print reporter; still photographer.

#### TAPING OF REMARKS

Prior to taping remarks of any person (public relations director, physician, administrator, nurse, etc.) for broadcast, Federal regulations (Federal Communications Commission, Rules and Regulations, Vol. III Part 73-1206) require the station to inform the individual of its intention to broadcast the conversation.

#### GRIEVANCE PROCEDURE

The Colorado Code of Cooperation Committee, which drafted the "Public Information Guidelines for Hospitals, Physicians and News Media" established a Grievance Committee in 1979. The purpose is to demonstrate that responsible news media and health care providers uphold these guidelines.

The procedure is as follows:

1. The grievance must be timely, and must be submitted in writing with all pertinent details to the grievance chairman.

2. The grievance chairman must select four other hearing committee members, with the majority (three) from the same profession as the person or group against whom the complaint was lodged.

3. The chairman will send a written copy of the complaint to the members selected and will ask for a response as to whether or not it is substantiated. He or she will also arrange a meeting within two weeks of that time to discuss the complaint.

4. At the meeting, the hearing committee will decide whether or not the complaint is truly substantiated and how to respond.

5. If the committee decides the matter is unsubstantiated, the chairman will write a letter to the person who initiated the complaint with the committee's reasons and send a copy of the Code of Cooperation Committee chairman.

6. If the committee decides the matter is sufficient to warrant further review, it must set up an investigation as it deems proper. This might involve asking both parties to appear to discuss the problem.

7. Following an investigation, all parties involved may be brought together for an open hearing before the committee.

8. The committee will subsequently make a decision based on its findings and submit its recommendations promptly in writing to the chairman of the Code of Cooperation Committee for appropriate action.

# Colorado Institutions Accredited for Continuing Medical Education

The following hospitals, health care institutions and medical specialty societies are accredited by the Colorado Medical Society to award CME credits that count toward the requirements of the Colorado Board of Medical Examiners and Category I requirements of the AMA's Physician's Recognition Award (PRA) as of April 3, 1980.

# WHAT IS THE COLORADO MEDICAL SOCIETY?

The Colorado Medical Society is an association of professionals which:

***"Promotes the science and art of medicine, the betterment of public health, and the welfare of the medical profession and the patients it serves; and promotes the similar interests of its component and district medical societies."***\*

Through the variety of physician councils and committees, the Colorado Medical Society continually monitors public health concerns, proposed legislation relating to these and other health issues, recommends legislation which will work toward the betterment of public health and welfare of the medical profession and the patients it serves.

In providing a continuing professional lobbying staff, the Colorado Medical Society keeps its physician members abreast of all current issues before the Colorado General Assembly and the Congress of the United States.

With regular publications, CMS is also able to inform members of pending and current actions as taken by the CMS Board of Directors and the Society leadership.

Colorado Medical Society yearly publishes the Physician's Directory, the most complete physician referral guide for private practice physicians, health care and medical education institutions, legal and insurance professionals, federal, state and local government offices and agencies.

A continuing program of public health information is conducted by the Colorado Medical Society and the Colorado Medical Society Auxiliary, working closely with public, private and parochial schools for the most complete program of health education and health awareness among primary and secondary school students.

Colorado Medical Society provides its own members with a continuing medical education program, year-around, involving numerous areas of specialty practice and general medicine. Such continuing medical education classes, seminars and symposia are accredited, and are announced in the monthly CME Calendar published jointly by the Colorado Medical Society and the Colorado Foundation for Medical Care.

*Colorado Medicine* is the official journal of the Colorado Medical Society, and in its short span of publication (under the present format) this magazine has been widely recognized for its excellence, both in design and editorial content. *Colorado Medicine* has become a widely-read publication carrying selective general advertising of a medical and health-related nature. Your inquiries about advertising and/or editorial contributions are invited. There are many other member services provided by the Colorado Medical Society, in keeping with the purposes, as stated in the Constitution of this 112 year old organization.

The Colorado Medical Society Department of Membership Services invites your inquiries concerning these myriad other services. Please contact the CMS Membership Services, (303) 321-8590, or write Member Services, Colorado Medical Society, 6825 East Tennessee, Building #2, Denver, CO 80224.

\* from the Constitution of the Colorado Medical Society, as amended through September 10, 1981

# **ARTICLES OF INCORPORATION OF COLORADO MEDICAL SOCIETY**

## **ARTICLE I NAME**

The name of this Corporation shall be "COLORADO MEDICAL SOCIETY."

## **ARTICLE II PERIOD OF DURATION**

The term of duration of this Corporation shall be perpetual.

## **ARTICLE III OBJECTS AND POWERS**

This Corporation is organized and shall be conducted for charitable and educational purposes, and shall be operated strictly as a non-profit corporation, so that no part of the net earnings of said corporation, if any, shall inure to the benefit of any private individual or member.

The general purposes of this Corporation are hereby declared to be to promote the science and art of medicine; and to promote the similar interests of its component societies.

In order to carry out the foregoing general objects and purposes of this Corporation, it shall have the power to give financial aid to any cause or institution, the primary objects of which are to improve the health of the citizens of the State of Colorado; to aid in problems of research which directly or indirectly concern the health of the people of the State of Colorado; to aid by loan, gift or grant any charitable or general social purpose or program of activity which is directly or indirectly concerned with the improvement of the health of the people of this State or the welfare of physicians; to aid by loan or gift any physician who may be in need; to conduct meetings or conventions of this Corporation or other educational, post-graduate, or clinical meetings for the benefit of this Corporation; to acquire, establish, support, and maintain facilities consistent with the general purposes of this Society; and to acquire by purchase, lease, or otherwise, property for such purposes; to create a trust fund or funds for a foundation for the promotion of the general health and welfare of the people of the State of Colorado, and the welfare of the medical profession of this State; to form or recognize component societies in such manner as may be provided by the Constitution or Bylaws of this Corporation; and, generally, this Corporation shall have the power to do any and all things consistent with the general objects and purposes for which this Society is formed and not now or hereafter prohibited by law.

The foregoing recital of powers is by way of enumeration and shall not be construed to be a limitation, but merely indicative, of the types of activity contemplated by this Society.

## **ARTICLE IV REGISTERED OFFICE AND REGISTERED AGENT**

The Registered Office and Registered Agent of this Corporation shall be as follows:

R. G. Bowman, Executive Vice President  
6825 East Tennessee Avenue  
Building 2, Suite 500  
Denver, Colorado 80224

## **ARTICLE V MEMBERSHIP**

The members of this Corporation shall be classified as Active Members, Honorary Members and Associate Members. Other classifications of membership may be established by the Bylaws of this Corporation. The method of election of members, within such classifications and subclassifications, and their respective qualifications, rights and privileges shall be as now or hereafter provided by the Bylaws of this Corporation. The voting rights of the members shall be as provided in the Bylaws; provided, however, the general membership as defined in this Article shall not have the right to vote upon amendments to the Articles of Incorporation of this Corporation.

## **ARTICLE VI HOUSE OF DELEGATES**

A governing body, to be known as the "House of Delegates of Colorado Medical Society," shall be created in such manner and with such composition as may be provided by the Constitution or Bylaws of this Corporation. It shall exercise the powers of the members of the Corporation as a whole, except such powers of the members as shall be reserved to such members by the Constitution or Bylaws or by the laws of the State of Colorado. The House of Delegates, through its members (who are also members of this Corporation), shall have the right to amend the Articles of Incorporation of this Corporation. It shall hold annual meetings and such other special meetings as may be provided by the Constitution and Bylaws; shall elect the officers of the Corporation; and shall transact all general business of the Corporation not otherwise specifically provided by the Constitution and Bylaws hereof. As the governing body of this Corporation, the House of Delegates shall have the power to adopt a Constitution and Bylaws not inconsistent with the general objects and purposes of this Corporation and not in conflict with the laws of the State of Colorado.

## **ARTICLE VII DIRECTORS**

In the interim between annual meetings and special meetings of the House of Delegates, the financial affairs and all other business and affairs of the Corporation shall be conducted by a Board of Directors, the number and composition of which shall be as provided for in the Constitution and Bylaws, except that the judicial powers of this organization

shall be exercised by a Judicial Council, established and composed as may now or hereafter be provided by the Bylaws of this Corporation.

IN WITNESS WHEREOF, We, the President and Secretary, respectively, of said Corporation have hereunto set our hands and have caused the seal of said Corporation to be hereunto affixed, this \_\_\_\_\_ day of \_\_\_\_\_, 1983.

COLORADO MEDICAL SOCIETY

By: \_\_\_\_\_  
Merlin G. Otteman, M.D.  
President

ATTEST:

\_\_\_\_\_  
R. G. Bowman, Secretary

## **CONSTITUTION**

(As Amended through September 10, 1981)

### **Article I—Name and Organization**

The name and title of this organization shall be the Colorado Medical Society. This Society is an organization composed of component societies and associations hereinafter referred to as component societies, and members.

### **Article II—Purposes**

The purposes of this Society are to promote the science and art of medicine, the betterment of public health, and the welfare of the medical profession and the patients it serves; and to promote the similar interests of its component county and district medical societies.

### **Article III—Membership**

The members of this Society shall be classified as Active Members, Honorary Members, Associate Members, and such other classes of members as may be established by the Bylaws. Qualifications for each class of members and the procedures for obtaining such membership shall be as provided in the Bylaws; provided that Active and Associate Members of this Society may gain such membership only through a component society of the Society, and upon election to such membership shall also become members of this Society.

### **Article IV—Component Societies**

The Colorado Medical Society shall include those component societies as now exist and may hereafter from time to time be chartered in the various counties and districts of the State of Colorado, as provided in the Bylaws.

## **Article V—House of Delegates**

There shall be a governing body of the Society to be known as the House of Delegates, which shall have the supreme policy-making authority of the Society, subject to such authority as may be granted by the Bylaws to the Board of Directors to establish policy for the Society between Meetings of the House of Delegates. It shall elect the officers of the Society, except as otherwise provided in the Bylaws, the Directors, the AMA Delegates and Alternates, the Judicial Councilors, the members of the Grievance Committee, the members of Councils, and other elected officials as provided in the Bylaws. It shall transact all general business of the Society not otherwise specifically provided for by the Constitution or Bylaws of the Society.

## **Article VI—Officers**

The officers of the Society shall be a President, President-Elect, Immediate Past President, Treasurer, Speaker of the House, and Vice Speaker of the House. Their qualifications and terms of office shall be provided in the Bylaws.

## **Article VII—Directors**

The Board of Directors shall be composed of the President, President-Elect, Immediate Past President, and other Directors of the Society, the number and selection of which shall be as provided for in the Bylaws. It shall have charge of the property and financial affairs of the Society, shall make policy for the Society as provided in the Bylaws between Meetings of the House of Delegates, and shall perform such other duties as prescribed by law governing Directors of corporations and as provided in the Bylaws.

## **Article VIII—Meetings**

In each year there shall be an Annual and Interim Meeting of the House of Delegates of the Society at such time and place as provided in the Bylaws. Special Meetings may be called and held as provided in the Bylaws.

## **Article IX—Funds, Dues and Property**

Funds shall be raised by annual per capita dues and may be supplemented by special assessments upon each member, which dues or special assessments shall be equal for all persons within any one classification or subclassification of membership. Funds may also be raised from the Society's publications, by voluntary contributions, or in any manner approved by the Board of Directors.

## **Article X—Amendments**

The House of Delegates may amend this Constitution at any Meeting, provided the proposed amendment shall have been introduced at the preceding Meeting and provided two-thirds of the voting members of the House of Delegates registered at the Meeting at which action is taken, vote in favor of such amendment.

# **STANDING RULES OF THE COLORADO MEDICAL SOCIETY 9-10-81**

## **Chapter 1. Officers and Other Elected Persons.**

**Section 1. Honorarium for President and President-Elect.** The President and President-Elect shall receive an honorarium, in addition to reimbursement for actual expenses incurred in fulfilling the obligations and duties of their office. The amount of this honorarium shall be determined annually by the Board, on recommendations received from Organizational Study Committee and/or Nominating Committee. The Board of Directors shall report the amount of each honorarium to the House of Delegates at each Interim Meeting.

**Section 2. Pre-A.M.A. Conference.** The A.M.A. Delegation shall schedule a conference not more than thirty days prior to each scheduled meeting of the American Medical Association House of Delegates. Advance notice of the conference shall be published to the Colorado Medical Society Board of Directors and to component society officers. The conference shall be held for the purpose of the Delegation receiving pertinent instructions from the Colorado Medical Society after the Delegation has informed those invited of current issues which are of particular interest to members of the Colorado Medical Society.

**Section 3. Historian.** There shall be an Historian of the Colorado Medical Society elected annually by the House after consideration of nominations of Active Members submitted by the Board (following recommendations of the Committee on Committees) or nominations from the floor. The Historian shall assume the maintenance of an accurate history of the Society, and is custodian of the Society's archives.

## **Chapter 2. Meetings, Agendas, and Attendance of Members of Boards, Councils, Committees and Subcommittees.**

**Section 1. Meetings.** When scheduling meetings, Council and Committee Chairmen shall, with Colorado Medical Society staff assistance, determine the time and place of meetings in such a fashion that, whenever possible, meetings do not conflict with previously-scheduled meetings of other Colorado Medical Society Councils or Committees, or with component society meetings.

**Section 2. Agenda.** Excepting the Grievance Committee, all bodies of the Society shall provide their members with an agenda of matters to be considered, mailed sufficiently in advance of any meeting to allow members review of the agenda and materials; a copy of such agenda shall be simultaneously submitted to the Board via administrative staff.

**Section 3. Attendance.** Reports of attendance shall be filed with Colorado Medical Society offices upon completion of all official meetings. Chairmen

may request resignation of any member who is absent from any two consecutive meetings.

**Section 4. Open Meeting and Executive Sessions.** The Board of Directors, Councils and Committees shall meet in open meetings, which any member of CMS and invited guests may attend. By majority vote of the voting members present at a meeting, an open meeting may be moved into Executive Session which shall be restricted to members of the official body and such others as the body shall determine.

## **Chapter 3. Indemnification of Officers, Directors, Members of Councils, Committees and Staff.**

Each Director and officer of the Society and each member of any council or committee of the Society, whether or not still in office, at the time claim is made, and each member of the employed staff of Colorado Medical Society, and personal representatives, of each of the foregoing, shall be indemnified by the Society against all claims, damages, judgments, losses, costs and expenses (including attorneys' fees), not otherwise paid or indemnified against by insurance coverage carried by CMS or by such person himself, actually and necessarily incurred by him in connection with the defense of any action, suit or proceeding in which he may be involved or to which he may be made a party by reason of any act or omission in the course of his duties in behalf of the Society, except in relation to matters as to which he shall be finally adjudged in such action, suit or proceeding to be liable for gross negligence or misconduct in the performance of duty. Such amounts indemnified against shall include amounts reasonably paid in settlement of claims for the purpose of curtailing the costs of litigation (or threatened litigation) but only if the Society is advised in writing by its counsel that in his opinion the person indemnified did not commit such gross negligence or misconduct. The obligation of the Society hereunder shall not exceed the sum of One Million Dollars (\$1,000,000) for any one claim nor more than Three Million Dollars (\$3,000,000) for all claims arising out of any one occurrence.

## **Chapter 4. House of Delegates.**

**Section 1. Resolutions and Reports to the House.** All reports and resolutions will be reviewed by the Speaker, and a resume of business of concern to members of the Society will be mailed to each Active Member three weeks prior to each Annual and Interim Meeting. The Speaker shall refer business to Reference Committees by subject matter. When similar subject matter is contained in more than one report, the Speaker may refer part or all of these reports to a single Reference Committee regardless of the source of the report.

**Section 2. Confidential Reports.** Confidential reports shall be received by the House in Closed Meeting or Executive Session. Names or other identifiable details shall in no case be included in published reports of the Grievance Committee or in reports by individual members of that Committee. Published reports of the Judicial Council or individual members thereof shall likewise omit such

names or details; but the Judicial Council shall, in a separate report submitted in Executive Session of the House, report its findings and decisions in all cases heard by the Judicial Council. Such report shall not include the name of, nor the means of identifying, the member who has received private reprimand or other private disciplinary action by the Judicial Council.

**Section 3. Fiscal Impact of Reports and Resolutions.** Authors of reports or resolutions to the House shall determine, with assistance of Colorado Medical Society administrative staff, the fiscal impact of such business, and a fiscal note shall be attached. Where such determination indicates expenditures beyond existing budget or dues structure, those resolutions or reports shall be presented to Colorado Medical Society offices 40 days prior to the next meeting of the House to be considered; Colorado Medical Society offices shall present this business to Component Societies 28 days prior to the next meeting. During the Interim Meeting, should the House determine that implementation of any report or resolution is required prior to the beginning of the next fiscal year, it shall so indicate at the time of approval. The House shall direct the Board of Directors to expedite the proposed action. The Board will review the action and determine the source of funding, and if the business is sufficiently urgent, may impose a special assessment of the membership.

**Section 4. Reference Committees.** After considering advice from the Committee on Committees, the Speaker shall appoint from elected Delegates and Alternates those Reference Committees which he feels will be needed at any forthcoming Meeting of the House. Insofar as possible Reference Committee Chairmen and members appointed after one Annual Meeting shall serve through the next Annual Meeting. Efforts shall be made to have representation from the five Director Districts on each Reference Committee. The Chairman of a Council, or the Council Chairman's designee from among members of the Council, shall be an ex officio non voting member of the Reference Committee considering the Council's major business, unless excused by the Reference Committee.

The Speaker shall meet with Reference Committee Chairmen before meetings of Reference Committees to review the duties and procedures of the work of Reference Committees. Any business to be considered by a Reference Committee must first be received for consideration by the House and referred to the Reference Committee by the Speaker.

**Section 5. Reference Committee Hearings.** Each Reference Committee Chairman shall instruct and organize the committee prior to open hearings and shall post an agenda of items in the order to be discussed. When the various sides of the issues have been adequately heard, the committee shall meet in executive session to formulate its report to the House. Minority reports may be submitted by dissenting Reference Committee members. Where possible the Administrative Offices of the Colorado Medical Society will contact representatives of any

specialty or other obviously interested group in order that they may appear at Reference Committee hearings on appropriate business referred to such Committee. The Reference Committee Chairman may authorize non-CMS members to appear before a Reference Committee for that portion of a hearing which particularly concerns the individual, providing they have registered at that Meeting.

**Section 6. Reference Committee Reports to Be Packaged.** Reference Committee reports will be packaged; each package will contain one Reference Committee report for each Delegate and for the executive staff employed by any component society. Packages will be available to one representative of the component society sufficiently in advance of the Meeting of the House when Reference Committee reports are considered, so that the component societies may hold caucus meetings.

**Section 7. Component Society Delegates.** The Colorado Medical Society shall notify a component society when an elected Delegate fails to attend all Meetings of the House of Delegates during any Annual, Interim or Special Meeting, unless the Colorado Medical Society shall have received prior notice of the reason for inability to be present. Expenses for attending Colorado Medical Society Meetings of the House, incurred by Delegates and Alternates from component societies, shall not be reimbursed by the Colorado Medical Society.

**Section 8. Parliamentarian.** The Speaker shall appoint a Parliamentarian prior to the beginning of each Meeting of the House.

**Section 9. Order of Business.** The following generally shall be the House's order of business at Annual and Interim Meetings. (The numbers I and 2 refer to first and second sessions of a Meeting.)

1. Call to order by the Speaker. (I) (2)
2. Report of the Reference Committee on Constitution, Bylaws and Credentials. (I) (2)
3. Confirmation of a quorum. (I) (2)
4. Disposition of minutes of last preceding Meeting of the House. (I)
5. Report of the Board of Directors. (I)
6. Report of the Judicial Council. (I)
7. Report of the Grievance Committee. (I)
8. Reports of officers and other elected persons. (I)
9. Reports of Councils and Committees of the House. (I)
10. Reports of special committees, etc. (I)
11. Election of Officers, Councils and other elected persons and bodies. (2)
12. Reports of Reference Committees. (2)
13. Unfinished Business. (I) (2)
14. New Business. (I)
15. Closed Meeting or Executive Session business, if any. (Actions determined upon shall be made final and recorded in open session.) (I) (2)
16. Announcements. (I) (2)
17. Adjournment. (I) (2)

**Section 10. Certificate of Service.** The Board of Directors shall prepare a suitable Certificate of Service, at least one of which shall be awarded at each Annual Meeting in the name of the House of Delegates.

A Certificate of Service shall be awarded to each President of the Society as he retires from office. Additional Certificates of Service may be awarded by vote of the House to other persons whose outstanding contribution to the Constitutional purposes of the Society entitle them to distinguished recognition, provided the Board first presents such a nomination to the House for action.

The Board may submit nominations for such certificates on its own motion and shall, at least ninety days before each Annual Meeting, invite the component societies to propose candidates for the Board's consideration toward such nomination. Each proposal to the Board of Directors and each nomination by the Board to the House of Delegates, shall include a citation of the services performed and positions held to justify the award.

**Section 11. Organizational Study Committee.** There shall be a Committee of the Colorado Medical Society to be known as the Organizational Study Committee, consisting of six CMS members, each of whom through past service in the Colorado Medical Society has some special knowledge of the organizational and administrative operations of the Society. With advice from the Committee on Committees, the members of such Committee shall be appointed by the President, for staggered terms of three years each. The Speaker of the House shall be an ex officio non voting member of the Committee. With respect to the Articles of Incorporation, the Constitution, the Bylaws and the Standing Rules of this Society, and to amendments to the constitution and bylaws of component societies, this Committee shall 1) be a fact finding and advisory body, 2) make a continuing review of these matters, and 3) report its recommendations to the House of Delegates through the Board. Every five years there shall be a review of Director Districts and Judicial Councilor Districts by the Organizational Study Committee.

## **Chapter 5. Board of Directors.**

**Section 1. Board of Directors.** The Board is charged by the House of Delegates to carry out Society policy on a continuing basis, and has authority to establish or modify policy pending ratification by the House at its next Meeting. To accomplish the oversight and management functions assigned to it, the Board shall employ personnel and accepted organizational techniques, including but not limited to:

**a. Executive Staff.** The Board shall direct Administrative Staff, through the Executive Vice President, in accomplishing the activities, goals and objectives of the Colorado Medical Society.

**b. Executive Vice President.** The Executive Vice President, as chief administrative officer, is directly responsible to the Colorado Medical Society Board of Directors. The Executive Vice President has the responsibility and authority to administer the business operations of the Colorado Medical Society and related or affiliated organizations and to coordinate the activities and functions of the Colorado Medical Society and all affiliated organizations. He shall see that an annual audit is conducted by an approved certified public accountant, whose report shall be submitted to the Board of Directors and to the House of Delegates. The Executive Vice President and other appropriate staff shall be bonded at the expense of the Society in such a manner as the Board of Directors may require. The Board shall annually review the activities of the Executive Vice President.

**c. General Counsel.** The Colorado Medical Society through the action of the Board shall retain an attorney who is admitted to practice law in the state of Colorado, for such term or indefinite period of time as the Board considers wise, to represent and to advise the Colorado Medical Society on legal affairs.

**d. Council and Committee Activities.** The Board shall transmit to Councils and Committees policy actions of the House; the Board shall act in the interim between the House Meetings to determine Colorado Medical Society policy and so inform Councils and Committees; reports or recommendations for action from Councils or Committees shall be transmitted to the Board.

## **Chapter 6. Councils and Committees.**

**Section 1. Councils.** Councils elected by the House of Delegates shall submit recommendations concerning Society policy to the Board of Directors. The charge of each Council shall be as provided in this Chapter. Councils shall communicate as needed to recommend and promote policies of the Society. All Council activities shall be reported to the Board, for information, policy action and transmittal to the House. No Council or Committee of the Society is authorized to act for or to bind the Society except on specific instruction by the House of Delegates or Board of Directors.

**a. Terms of Members.** Terms of Council members shall be for two years. Members of Councils specified in this Chapter and elected by the House of Delegates shall serve terms so arranged that one-half of the number of members of each Council shall expire each year. Elections by the House of Delegates to fill vacancies shall be for the unexpired term. Council members may serve not more than three terms of full continuous service. Members whose terms have expired may be retained for one year as a non voting advisor or consultant, where such retention is felt to lend continuity to Council activities.

**b. Size of Councils.** Councils shall have no fewer than eight nor more than twelve members. Every effort shall be made by the Committee on Commit-

tees so that each Council, except the Council on Legislation, shall have at least two members from each of the five Director Districts, to carry out the purposes of the Colorado Medical Society.

c. **Chairmen and Vice Chairmen.** Chairmen and Vice Chairmen shall be elected annually by the House from among members of the Councils.

d. **Council Activities.** The Board of Directors may recommend, and the House of Delegates may create, any number of Councils with specific instructions for activity. The existing Councils and the charges given to them are as follows:

(1) **Council on Legislation.** The Council shall represent the Society in all matters pertaining to federal, state and local legislation and legislative bodies. It shall promote the determined policies of the Society with regard to: a) all proposed or pending health-related legislation, and b) the formulation of rules and regulations of governmental agencies for implementation of existing laws. The Council shall seek advice and assistance from other appropriate Councils or Committees in arriving at policy recommendations.

(2) **Council on Professional Education.** The Council shall promote the policies of the Society in all matters concerning undergraduate, graduate and postgraduate medical education.

(3) **Council on Professional Relations and Medical Service.** The Council shall represent the Society in matters regarding our profession and other professions and shall promote Society policies which affect the delivery of health care.

(4) **Council on Public Health.** The Council shall promote public health policies of the Society.

(5) **Council on Socio-Economics.** The Council shall identify and evaluate social and economic issues which significantly impact physician reimbursement, practice and management (or administration).

**Section 2. Committees.** Members of Committees shall be members of the Colorado Medical Society unless otherwise determined by the Board of Directors. Chairmen of Committees shall be Active Members of the Society, and where possible, shall be selected from Council members. Members and Chairmen of Committees shall be appointed by the Board, on recommendation of the Committee on Committees and Council Chairmen. As much as possible Committee members shall represent all geographic portions of the state; where indicated there shall be adequate specialty representation. Committee terms shall expire annually at the close of the Annual Meeting, except as otherwise provided in the Bylaws or Standing Rules.

**Section 3. Sunset Evaluation.** The Committee on Committees annually should review whether Councils should be continued or charges amended and

submit recommendations to the Board of Directors and the Organizational Study Committee for report to the House of Delegates. The Committee on Committees annually should review whether Committees should be continued and submit recommendations to the Board of Directors.

## **Chapter 7. Recall.**

**Section 1. Verification of Signature.** Upon receipt of a petition for recall, the Executive Vice President of the Society shall verify the signatures and the qualifications of the persons who signed the petition.

**Section 2. Filing of the Petition.** The petition for recall must be filed with the Executive Vice President not less than ninety days before the first session of the Meeting of the House of Delegates at which the petition is to be presented for action.

**Section 3. Notice of Petition.** Notice, in writing, shall be given promptly by the Executive Vice President to the elected official whose recall is sought, informing him that the recall petition has been filed, and stating reasons, if any, given in the petition for the recall. He shall also be informed that he shall have the right to be present at the Meeting of the House at which the recall petition is to be debated and acted upon, that he shall have the right to appear before and offer evidence to the Reference Committee to which the petition shall be referred, and that he shall have the right to participate in the debate on the floor of the House. Such notice must be mailed by registered or certified mail, return receipt requested, not less than sixty days prior to the opening session of the House of Delegates at which the petition shall be presented.

**Section 4. Action by the Executive Vice President.** If the nature of the petition for recall indicates some conduct which would require or justify appropriate action of a committee of the Colorado Medical Society, the Executive Vice President shall have the authority to refer the matter to such committee.

**Section 5. House of Delegates Action.** In addition to the participation by the elected official, the Speaker of the House shall permit one or more proponents of the petition to participate in the Reference Committee hearing, to offer evidence at that hearing, and to participate in the debate on the floor of the House.

**Section 6. Finality of House Action.** The action of the House of Delegates shall be final, and shall not be subject to appeal.

## **Chapter 8. Qualifications for Being Elected to a Position in the Colorado Medical Society.**

**Section 1. President-Elect.** The President-Elect should have served or be serving as a CMS Director (Trustee), elected officer, or a member of other elected Colorado Medical Society bodies (Councils or Committees).

Section 2. **Treasurer.** The Treasurer should have been a member of the Colorado Medical Society Finance Committee.

Section 3. **Speaker.** The Speaker should be elected from nominees who have served as Vice Speaker.

Section 4. **Vice Speaker.** The Vice Speaker should be elected from nominees who have served 1) as an elected Delegate from a constituent medical society, 2) previously as Speaker or Vice Speaker or, 3) in a position to which elected by the House of Delegates.

Section 5. **Delegates to the American Medical Association.** A nominee for A.M.A. Delegate should have served as an A.M.A. Alternate Delegate, unless such potential nominees are unwilling to serve; in such case the nominee shall have served as an officer or Director of the Colorado Medical Society.

Section 6. **Alternate Delegates to the American Medical Association.** A nominee for A.M.A. Alternate Delegate should have served as an elected officer or Director of the Colorado Medical Society or as an elected Delegate or officer of a constituent medical society.

## Chapter 9. Elections.

Section 1. **Nominations from the Board of Directors.** The House of Delegates shall elect Council members and Historian after consideration of nominations submitted by the Board of Directors (following recommendations of the Committee on Committees). The slate of nominations shall be transmitted in the Delegates Handbook prior to the Annual Meeting.

## Section 2. Petition.

a. Following nominations of the Nominating Committee and Board of Directors, additional candidates for Director to represent a Director District or any other elective office may be nominated by a petition signed by fifty (50) Active Members.

b. Petitions for the position of President-Elect shall be for a candidate who comes from the same region as the Nominating Committee's nominee.

Section 3. **President-Elect.** The President-Elect should be selected on a rotating basis from three regions of the state, namely Out State, Metro (District II excluding Denver), and Denver. The component society or societies in the region of the state from which the President-Elect is to be elected at the forthcoming Annual Meeting shall submit the names of qualified candidates for the consideration and decision of the Nominating Committee. If there is no one in the region who wishes to run, the Nominating Committee can ask other regions to nominate candidates.

Section 4. **Grievance Committee.** On the Grievance Committee, when possible, at least one member should be a Society member who has had

legal training, and one member should be a qualified psychiatrist.

Section 5. **Election and Installation.** Elections shall be held at the second Meeting of the House at each Annual Meeting. Installation of those elected shall occur at an appropriate time during the Annual Meeting.

## Chapter 10. Annual and Interim Meetings.

Section 1. **Registration Required.** Each person attending any of the Society's Meetings shall register, and shall receive thereafter an identification badge. No person may take part in any Meeting until this provision has been completed.

## Chapter 11. Membership.

Section 1. **Change of Component Society Membership.** An Active or Associate Member who changes the major professional office from the jurisdiction of one component society to the jurisdiction of another component society in this or any other state and who wishes to change membership to the component society having jurisdiction over the new office shall submit an application for membership to the new component society, together with such information as that component society shall require to show qualifications for membership. When such an Active or Associate Member wishes to change component membership, a form prepared by the Colorado Medical Society shall be completed and submitted to the appropriate state and component societies. Details for processing change from one component society to another shall be provided in rules adopted by the Colorado Medical Society Board of Directors.

The information to be provided to the new component society shall include written verification from his present component society as to whether he is then in good standing in that society, and such other facts about his membership as may be needed. The application shall then be reviewed promptly by the new component society, and acted upon in accordance with the eligibility for membership requirements as set forth in Section 5 of Chapter I of the Bylaws; provided, however, that, if the applicant is then under suspension for nonpayment of dues, these dues shall be paid to the new component society, and any local or state delinquent assessment must be paid in full to the former component or state society before an application is approved.

Section 2. **Orientation of New Members.** Information to orient new Active Members of the Society in the duties, privileges, and obligation of membership, shall be provided under the supervision of the Board of Directors in a form the Board deems appropriate to the needs of the Society and its new members, as approved by the Board of Directors.

Section 3. **Appeals from Component Society Decisions.** Actions of component societies on applications shall be in writing and copies thereof shall be

furnished to all parties of interest within ten days after decision. Such decisions shall become final unless appealed from in writing within ninety days from the date of the decision. With a copy of the decision, the rejected applicant shall be notified of the right of appeal.

**Section 4. Failure to Perform Secretary's Duties.** When in the opinion of the Board of Directors of the Colorado Medical Society, an elected official acting in the capacity of secretary of a component society has failed to perform duties toward this Society because of illness, absence from the component jurisdiction, failure to exercise due diligence, or other cause, the Board of Directors may appoint an acting secretary for the component society for such period of time as is necessary so that the work of the Colorado Medical Society shall not be unduly delayed.

**Section 5. Records of Defunct Component Society.** Should a component society at any time become defunct for any reason, its membership records shall become the property of this Society, and the records shall be transmitted to the Society's Executive Office for custody.

#### **Section 6. Termination of Membership.**

a. Expulsion from any component society, after due proceedings have been conducted, upon becoming final, terminates membership in this Society of the member so expelled. There shall be no refund of dues or assessments to an expelled member.

b. Any member of a component society who has been judged guilty by the component society of gross misconduct as a physician or a violation of any of the provisions of the Bylaws or principles of professional conduct of that society or of the Society's code of ethics, may be subject to censure, probation, suspension, or expulsion from that society by such component society.

**Section 7. Code of Ethics.** An applicant must be provided with a copy of and subscribe to the adopted code of ethics of the Colorado Medical Society and shall recognize the CMS Judicial Council as the final authority to interpret any disputed points of ethics.

### **Chapter 12. Finances.**

**Section 1. Remittance of Dues Monies.** Each component society shall forward to the Colorado Medical Society, at least monthly, all dues monies collected by the component society during the preceding calendar month or to the date of remittance if remitting more frequently, with forms provided by the Colorado Medical Society.

**Section 2. Suspension.** Prior to January 15 the Colorado Medical Society shall send to any member whose dues have not been received, a notice reminding the member of the penalties of being suspended from membership and soliciting continuance of membership. The Society shall notify the appropriate

component society of the names of members being sent such notice.

**Section 3. Reinstatement.** Reinstatement becomes effective as of the date of payment certified by the secretary of the component society, provided that the date may not precede by more than thirty five days the date of receipt of the certification by the Colorado Medical Society.

**Section 4. Dues Refund.** If a member is changed from a dues paying classification during the calendar year for which dues have already been paid, to a reduced dues or gratis classification, the dues shall be refunded through the component society for the half-year then applicable, but not to exceed half-year dues if the change occurs after February 1, and no refund at all if the change occurs after July 1. If a member dies, resigns, or transfers to a state that does not accept him gratis for the remainder of the year, before February 1 dues shall be refunded in full (one half, between February 1 and July 1).

**Section 5. Expense Reimbursement.** Subject to the provisions of the Bylaws and Standing Rules and to the financial condition of the Society at any given time, the Board of Directors may, but shall not be required to, reimburse Officers, and other elective or appointive members of councils and committees for expenses incurred by them in carrying out their official duties; provided, that no member of the Society may be reimbursed for attending any meeting of the whole Society or of the House of Delegates. The Board of Directors is authorized to adjust current and future annual budgets and to take such other action as it may deem proper in carrying out this policy.

**BYLAWS**  
(as amended March 6, 1983)

**Chapter I — Membership**

**Section 1. Evidence of Membership.** The name of any person on the official roster of the Colorado Medical Society shall be prima facie evidence of the person's membership and the right to all privileges of that class of membership. An official Society roster shall be maintained at all times in the offices of the Colorado Medical Society.

**Section 2. Meaning of Term "Members."** Active and Associate Members of the Society may gain membership only through a chartered component society of the Society, and upon election to membership shall also become members of this Society. Whenever the term "physician" is used by the Society, it shall include "Doctors of Medicine" and "Doctors of Osteopathy."

**Section 3. Classes of Members.**

**a. Active Members.** Active Members of this Society shall be those physicians and medical students who are in good standing as Active Members of the respective component societies, and who have been so certified by Colorado Medical Society. All Active Members shall have the rights and privileges of membership as provided by the Bylaws.

**(1) Active Members Junior.** Solely for the purpose of providing a reduced rate of dues Active Members shall be accorded this classification for a total period of two years of active medical practice, whether continuous or interrupted by military service or additional formal training — specifically, full-time AMA Approved Internship, Residency, Fellowship, or Preceptorship. Any period of active medical practice in any locality will be included as a part of the two-year period of eligibility for Active Junior Membership.

Active Members Junior shall pay 35 per cent of annual Active dues during the first partial year of membership, if they join the Society or change to this classification during the last six months of a membership year, and shall pay 35 per cent of annual Active dues during the subsequent full year of membership. They shall pay 70 per cent of annual Active dues during the second full year of membership. Following that, the physician shall pay full Active dues.

**(2) Active Members Emeritus.** An Active Member in good standing who has reached sixty-five years of age and who has been an Active Member of this Society for not less than five years, or who has been an Active or dues paying member of the Colorado Medical Society for thirty-five years, shall be classified as an Active Member Emeritus. If approved by the component society and the Society's Board of Directors, additional Active Members Emeritus shall be, (a) those Active Members who are retired from practice of medicine or any other full time occupa-

tion, and who have been Active Members of this Society for not less than five years, and (b) those retired physicians who have moved to Colorado and who have held dues paying membership in another state medical association or the American Medical Association for not less than five years. Active Members Emeritus status shall be accorded for life unless the member returns to the practice of medicine or to any other full time occupation, which shall exclude such member from previously approved status under (a) above. Active Members Emeritus shall enjoy all rights and privileges of membership, including the right to vote and hold office.

**(3) Active Members Emeritus-Annual.** An active member may be reclassified Active Member Emeritus-Annual if a temporary financial hardship reduces his practice or occupation to less than half time. This temporary financial hardship may result from physical disability, major illness or personal catastrophe. Reclassification will be made by the Board of Directors upon recommendation of the Component Society and will be reviewed annually by the Component Society. Active Members Emeritus-Annual shall enjoy all the rights and privileges of membership, including the right to vote and hold office.

**(4) Active Members Graduate and Student.** Active Members Graduate shall be those members serving in an American Medical Association approved Resident training program. Active Members Student shall be those members who are medical students enrolled in any accredited medical school who are training in Colorado. Active Members Graduate and Student shall pay annual dues or assessments in an amount not to exceed ten per cent of the annual Active dues or assessments.

**b. Honorary Members.** The House of Delegates may elect as an honorary member any exceptionally distinguished person who has made significant contribution to the constitutional purposes of this Society and whose nomination shall have been approved first by the Board of Directors. Honorary Members may not vote nor hold office, and shall be exempt from all dues and special assessments, but shall have all other rights and privileges of membership. Component societies may elect Honorary Members who need not necessarily be members of the Colorado Medical Society.

**c. Associate Members.** Associate Members of the Colorado Medical Society shall be those persons who have been elected by component societies to any form of component society membership other than active and honorary membership, are in good standing in such membership, who have been so certified to the Society headquarters, and who meet one of the following qualifications:

**(1) Active Members of constituents of the American Medical Association;**

(2) Dentists who hold a degree of D.M.D. or D.D.S. who are members of the American Dental Association and of the state and local dental societies;

(3) Pharmacists who are active members of the American Pharmaceutical Association;

(4) Teachers of medicine or of the sciences allied to medicine, who are citizens of the United States and are ineligible for Active Membership;

(5) Individuals engaged in endeavors allied to medicine who have attained distinction in their fields of endeavor as determined by the component society and the Board of Directors of the Colorado Medical Society.

Associate Members who do not pay Active dues elsewhere in the State shall pay Colorado Medical Society annual dues or assessments in an amount not to exceed thirty-five per cent of annual Active dues or assessments. Associate Members may not vote nor hold office in the Colorado Medical Society, but shall have other rights and privileges of the Society.

**d. Inactive Members.** Active Members may request inactive status for a period of six or more months during which time they may be (1) in missionary service, (2) located outside the State of Colorado, (3) on sabbatical or similar leaves of absence, who wish to maintain an affiliation with the Society and anticipate future reinstatement to Active Membership. Inactive Members may not vote or hold office at state or component society level. Inactive Members shall not be required to pay annual dues or assessments, but may be required to pay a subscription fee for publications. Inactive Members shall apply to the component society for reinstatement.

**Section 4. Initiation, Alteration, and Termination of Classification and Subclassification of Members.** Component societies shall determine classification of members, with changes of classification subject to review by the Society's Board of Directors. Component societies shall change or terminate classification as justified. Each component society shall certify the classification and subclassification of all its members to the Colorado Medical Society annually at the time of remitting annual dues.

#### **Section 5. Determination of Qualifications for Membership.**

**a. Component Societies as Judges.** Component societies shall, subject to the eligibility requirements stated below, be the judges of the qualifications of any applicant for membership. In considering an application, the component society shall receive and consider relevant information which it may obtain from the executive office of Colorado Medical Society, the AMA Biographical Department, or other sources, provided that due process is accorded the applicant.

**b. Eligibility Requirements.** Membership in Colorado Medical Society and its component societies shall not be denied or abridged because of sex, color, creed, race, religion, or ethnic origin. To be eligible for Active Membership, all of the following requirements must be met:

(1) The applicant must be of reputable character.

(2) The applicant must be a medical student enrolled in any accredited medical school who is training in Colorado or must be licensed or otherwise legally qualified to practice medicine in the State of Colorado. The applicant may not hold a license which is currently revoked or suspended by any physicians' licensing authority, in Colorado or elsewhere.

(3) The applicant must furnish proof of his practice of medicine in accordance with proper ethical standards, including the practice of scientific medicine.

(4) The applicant must furnish proof of competent practice as a physician, in accordance with generally accepted standards of medical care.

(5) The applicant must furnish proof of his acceptable, physical, mental, and emotional condition, free of any condition which would significantly impair capability of providing an acceptable standard of medical care.

**c. Proof of eligibility.** An applicant for Active membership shall have the burden of proving that he or she meets the eligibility requirements stated above. The applicant may be required to make a full disclosure of all relevant information pertaining to his qualifications, and to indicate the sources from which such information can be verified. The component society may solicit any additional information concerning his qualifications. The component society may establish other criteria for membership as long as uniformly applied to all applicants.

#### **Section 6. Application for Membership.**

**a. Procedures for Application.** Before action is taken by any component society upon an application for membership by a physician, a completed application form shall have been submitted by the component society to the Colorado Medical Society, and the form shall have been returned to the component society together with such information the Society's Executive Office and the Biographic Department of the American Medical Association may be able to supply as an aid to the component society in determining the eligibility of the applicant.

**b. Basis for Decision on Application.** The decision of the component society upon the application shall be made on the basis of a fair and objective consideration of the information obtained relative to the applicant's qualifications in accordance with eligibility requirements. Evidence which is speculative in nature or which fails to meet the requirements for reliability as commonly applied in administrative hearings shall not be considered.

**c. Process for Consideration of Application.** The application shall be referred by the component society to a component society credentials committee of not less than three nor more than nine members, who shall study the application and make such investigation as may be appropriate to determine the qualifications of the applicant and whose action on such application shall constitute the action of the component itself. Such committee shall proceed with all due diligence, and shall complete its consideration as soon as reasonably possible under the existing circumstances. Rules of due process shall be followed, which shall include:

(1) The disclosure to the applicant of any adverse information which could form a basis for rejection of the application, and allowance of full opportunity for the applicant to respond.

(2) The right of the applicant to be heard on his application and to be represented by counsel if desired.

(3) The right to appeal to the Judicial Council from rejection of the application.

**d. Detailed Rules for Processing Membership Applications.** The Board of Directors may adopt rules, not inconsistent with these Bylaws, providing in detail for the processing of membership applications.

**Section 7. Application by Expelled Physician or Physician Whose License has been Revoked or Suspended.** If an applicant shall have been expelled from membership in this Society or from any other constituent of the American Medical Association, on the basis of misconduct, or if the applicant shall have been the subject of disciplinary action resulting in revocation or suspension of his license to practice medicine, in Colorado or elsewhere, or if the applicant shall have been convicted of a felony in Colorado or elsewhere, then the component society shall defer action on the application and shall submit the same to the Judicial Council, with such recommendations, if any, as the component society deems warranted, for review by the Judicial Council. The Judicial Council may consider the application on the basis of the information submitted or may call for further information, and in due course may approve or disapprove the application. Unless and until the Judicial Council shall have approved the applicant's eligibility for membership, and shall have so notified the secretary of the component society, no further action may be taken by the component society on the application.

**Section 8. Expulsion and Disqualification of Members.**

**a. Effect of Conviction of Felony, or Revocation or Surrender Other than by Non-renewal, or Suspension of License.** A member who has been convicted of a felony or whose license to practice has been revoked or surrendered other than by non-renewal shall be expelled from membership in his component society

and this Society automatically, as of the date of conviction or revocation. If any member's license to practice medicine shall be suspended, such member shall automatically be disqualified during the period of such suspension or surrender other than by non-renewal from exercising any rights or privileges as a member of a component society or of this Society; provided, however, that nothing herein shall preclude proceedings before, or discipline (including expulsion from membership) by the Judicial Council based on the same grounds on which the license was so suspended. This section shall not apply to a member who has been suspended for nonpayment of the annual registration fee as required by law, unless such member shall within thirty (30) days of such suspension fail to have his license reinstated, nor shall this section apply to a member whose license is not renewed because of retirement. Any member disqualified under this section, whose license to practice medicine in the State of Colorado has been restored, may reapply for membership in Colorado Medical Society subject to the provisions of Section 7 of this Chapter.

**b. Effect of License Probation.** A member whose license has been placed on probation shall not automatically be expelled or disqualified from membership in a component society of this Society; provided, however, that nothing herein shall preclude proceedings before, or discipline by (including expulsion from membership) the Judicial Council based on the same grounds on which the license was placed on probation.

## Chapter II — Component Societies

**Section 1. Plan of Organization.** Except as otherwise provided below, only one component society shall be chartered in any one county of the state; however, subject to recommendation by the Judicial Council a charter may be granted to a component society having territorial jurisdiction consisting of one entire county and any other contiguous county or counties, or portions thereof, or consisting of a portion of one county only, or consisting of contiguous portions of two or more counties, if in the judgment of the House of Delegates the interests of this Society will be best served thereby and the territory constitutes a suitable unit, taking into consideration geographic conditions, political subdivisions, and population distribution. However, there may be a chartered component society to be known as the "Student Medical Society" to consist of medical students enrolled in any accredited medical school who are training in Colorado, and there may be a chartered component society to be known as the "Colorado Housestaff Medical Society" to consist of those members serving in approved internships, residencies, fellowships, or preceptorships, as defined in Chapter I on Membership.

**Section 2. Eligibility for Charter.** Component medical societies which adopt the principles of organization and a constitution and bylaws in conformity with those of this Society may apply for charter. Upon recommendation of the Judicial Council and

upon approval of the application by the House of Delegates the House shall issue charters to component societies, after which the society shall become a component society. The House of Delegates may revoke charters for cause deemed by it sufficient, upon the recommendation of the Judicial Council.

**Section 3. Constitution, Bylaws and Amendments.** Each component society shall keep on file in the Executive Office of this Society a copy of its current Constitution and Bylaws. No component society may amend or revise its Constitution and Bylaws to be in conflict with the Constitution and Bylaws of this Society. Any such amendment or revision found to be in conflict shall be null and void. To avoid conflict any component society contemplating amendment or revision of its Constitution and Bylaws shall first submit the proposed amendment or revision to the Organizational Study Committee. The Colorado Medical Society Bylaws shall supersede any component society bylaws.

**Section 4. Annual Report of Election.** Component societies shall submit an annual report of election of officers, and Delegates and Alternates, no later than 45 days after the election, to the Reference Committee on Constitution, Bylaws and Credentials. When the report has been approved by that Committee, the component society shall be held to be in good standing and its Delegates and Alternates shall be held to be accredited for the period covered by the report. Component society physician officers, Delegates and Alternates shall be Active Members in good standing of the Colorado Medical Society.

**Section 5. Penalty for Delinquent Annual Report.** The Reference Committee on Constitution, Bylaws and Credentials shall immediately notify in writing to the last reported officers of any component society whose report required by Section 4 of this chapter is delinquent or is disapproved. If such a report is not made to the Reference Committee on Constitution, Bylaws and Credentials within such time as the committee may fix in such notice which shall not be less than thirty days after the date of the notice, the delinquent component society shall have no representation in the House of Delegates at the next Annual or Interim Meeting or Special Meeting of the House, unless excused by the House.

**Section 6. Duplicate Memberships Forbidden.** No member may hold Active membership in more than one component society in this State, and no Active Member of this Society may hold an equivalent membership in any other state society or association which is a constituent of the American Medical Association.

**Section 7. Jurisdiction Over Physicians in District.** Each component society shall have jurisdiction and general direction of the affairs of the profession in the territory of that society. A physician living in a county or district having no component society may hold membership in a conveniently situated component society. A physician residing in a state adjoining the State of Colorado, on or near the state

boundary, or residing in a place where no constituent of the American Medical Association has jurisdiction, may hold membership in a conveniently situated component society in this state in accordance with the Bylaws and regulations of the American Medical Association. A physician residing in this state shall hold membership in the component society which has jurisdiction over the territory in which his major professional office is located; provided, that physicians in full-time state or federal government service of a national or statewide nature may elect to be members of the component society having jurisdiction over either their residence or the location of their central place of employment.

**Section 8. Waiver of Jurisdiction.** A physician desiring to hold Active membership in a component society other than the one in which his major professional office is located may apply to this latter society for a waiver of jurisdiction and, if good cause is shown, the waiver shall be granted and the Executive Office of the Society notified in writing. Any physician refused such waiver by the Society of jurisdiction may appeal to the Judicial Council.

### Chapter III — Colorado Medical Society Delegates

**Section 1. Eligibility to Serve.** To be eligible for service as a voting Delegate or Alternate from a component society, other than a student component society or a housestaff medical society, a physician shall have resided and practiced in the State of Colorado for at least two years and shall have been an Active Member of this Society in continuous good standing for at least two years immediately preceding both his election and his seating in any meeting of the House, except as otherwise ruled by the Reference Committee on Constitution, Bylaws and Credentials.

**Section 2. Eligibility to Serve as Delegate from the Student Medical Society or the Housestaff Medical Society.** To be eligible for service as a voting Delegate or Alternate from the student medical society, a medical student shall have been a student at an accredited School of Medicine for at least six months and shall have been an Active Member of this Society in continuous good standing for at least six months immediately preceding both his election and his seating in any meeting of the House, except as otherwise ruled by the Reference Committee on Constitution, Bylaws and Credentials. A member of the Housestaff Medical Society shall have been in an AMA-accredited training program for at least six months and shall have been an active member of this Society in continuous good standing for at least six months immediately preceding both his election and his seating in any meeting of the House, except as otherwise ruled by the Reference Committee on Constitution, Bylaws and Credentials.

**Section 3. Terms of Delegates.** Other than Student Medical Society Delegates, Housestaff Medical Society Delegates, and ex officio members of the House, Delegates and Alternate Delegates shall be

elected for terms of two years. Elections to fill vacancies shall be for the unexpired term. Student Medical Society Delegates and Housestaff Medical Society Delegates shall hold office for terms of one year.

**Section 4. Apportionment.** Each component society in good standing as provided for by Chapter II of these Bylaws shall be entitled to send to each Annual or Interim Meeting or Special Meeting of the House of Delegates in any calendar year one Delegate for every twenty-five Active Members in good standing as of September 30 of the previous calendar year, and one Delegate for an additional fraction thereof; provided, however, that each component society shall be entitled to at least one Delegate. A component society shall elect Delegates and Alternates at such time during the year as its Constitution or Bylaws shall provide. The term of an incumbent Delegate or Alternate shall continue until the date for commencement of the term of his successor. In the event there shall be a Special Meeting of the House of Delegates between the dates of September 30 and December 31 of any calendar year, the number of Delegates to which each component society shall be entitled shall be based upon the membership count as of September 30 of that year.

**Section 5. Individual Alternates and Substitute Alternates.** Each component society shall elect an Individual Alternate for each Delegate, who shall be eligible to represent the component society as Delegate in the event of the principal Delegate's failure to attend or qualify for service. Should both a Delegate and the Alternate be unable to serve, the Reference Committee on Constitution, Bylaws and Credentials may accredit, as substitute Alternate, any elected Alternate of that component society whose principal has already been seated. If for any reason there is an insufficient number of Delegates and Alternates available to provide full representation for any component society, the Committee may at its discretion accredit the requisite number of substitute Alternates appointed by the appropriate authorities of the component society. Each substitute Alternate, upon presentation of proper credentials, shall be eligible to be seated at that session.

**Section 6. Seating of Delegates and Alternates.** An accredited Delegate, as provided for in Chapter II, Section 4, once seated, shall serve without substitution, unless substitution is consented to by a vote of the House. In case of the absence of an accredited Delegate who has not yet been seated, that Delegate's accredited Alternate shall be seated if present. Once an Alternate or substitute Alternate has been seated at a meeting, he shall remain seated until that meeting is adjourned unless he is unseated by a vote of the House. Subject to confirmation by vote of the House, members of the House of Delegates shall be considered seated when their names have been placed on the roll of the House, as prepared by the Reference Committee on Constitution, Bylaws and Credentials.

**Section 7. Limitations; Voting; Absences.** Each Delegate from a component society shall be entitled to one vote only, and he shall only represent the component society through which his Active Membership originates. Proxies shall not be recognized under any circumstances.

**Section 8. Restriction of Eligibility.** In case any Delegate or Alternate Delegate to the House of Delegates is elected as an Officer, a Director, a Judicial Councilor or as a Grievance Committee member, the eligibility of such Delegate or Alternate Delegate to represent his component society as Delegate shall automatically terminate upon adjournment of the Annual Meeting at which he was elected, and in case any Delegate or Alternate is appointed by the Board of Directors to fill a vacancy for any position named above, his eligibility to represent his component society shall automatically terminate upon his acceptance of the appointment.

#### Chapter IV — House of Delegates

**Section 1. Composition of House.** The House of Delegates shall be composed of the Speaker and Vice Speaker of the House of Delegates and delegates (or their alternates, as the Bylaws may provide) elected by the component societies in proportion to their Active Membership in a manner to be provided for by the Bylaws. Members of the Judicial Council, members of the Grievance Committee, the Delegates to the American Medical Association and their Alternates, all Past Presidents of the Colorado Medical Society and the President of each component society, shall be ex officio members of the House of Delegates with the right of discussion but without the right to introduce new business or resolutions, to make or second motions, or to vote, unless elected by component societies to serve as a delegate or alternate. Present members of the Board of Directors shall be ex officio members of the House of Delegates with the right of discussion, with the right to introduce new business or resolutions, and make or second motions, but without the right to vote.

**Section 2. Functions of the House of Delegates.** The House shall be the governing body of the Society, and shall have the supreme policy making authority for the Society.

**Section 3. Open Meeting, Closed Meeting and Executive Sessions.** Except as otherwise provided for in the Bylaws or Standing Rules the House of Delegates shall meet in open meetings to which any registered person may be admitted, but by majority vote of the members present an open meeting may be moved into a closed meeting or an Executive Session. A closed meeting shall be restricted to members of this Society and to administrative employees of this Society and of its component societies. An Executive Session shall be restricted to members of the House of Delegates as defined in Section 1, such additional accredited Delegates and Alternates as may be present although not seated for voting at that meeting of the House, and such administrative employees of this Society and its

component societies as may be accredited for such attendance by the Speaker of the House. The House in any meeting may by vote admit any person to its deliberations.

**Section 4. Quorum.** One-third of the accredited members of the House of Delegates shall constitute a quorum for the transaction of ordinary business.

**Section 5. Minutes.** The House of Delegates shall keep minutes of all its proceedings, and shall publish an abstract of its minutes to the entire membership.

**Section 6. Limitation on New Business.** No new business shall be introduced on the last day of any Meeting of the House except by consent of two-thirds vote of all accredited members of the House registered at that Meeting, and final action on any such new business shall require a two-thirds vote of those present.

**Section 7. Resolutions to be Referred to House.** All resolutions or actions or memorials intended to be issued in the name of the Society must be referred to the House of Delegates not later than twenty-four hours prior to the time fixed for sine die adjournment of the House and must have the approval of the House of Delegates before being issued or becoming effective. Resolutions which would require an appropriation of funds must be considered by the Board of Directors before introduction to the House. Every Board, Council or Committee receiving a resolution passed by the House of Delegates shall be required to report to the House of Delegates or the Board of Directors, any action or decision taken regarding the resolution. Further reports shall be submitted in each succeeding Handbook until a statement of final disposition of the Resolution is made. Resolutions authored by individual members must be introduced by a Delegate.

**Section 8. Reports of Activities.** The Board of Directors, the Judicial Council, the Grievance Committee and the AMA Delegation shall each submit a report of their activities to the House of Delegates at Annual and Interim Meetings of the House. The President and President-elect may address the House at the Annual Meeting if they wish.

**Section 9. Reports and Resolutions Due.** All reports of officers, Boards, Councils and Committees and all Resolutions must be in the hands of the Executive Office forty days prior to the meeting of the House. Such reports and resolutions shall summarize recommendations for future action. A Delegates Handbook shall be prepared and will be mailed to each Delegate four weeks prior to the meeting. Only such committees as are so directed by the House of Delegates or the Board of Directors shall submit reports directly to the House of Delegates.

Material submitted after the deadline will be duplicated and distributed to Delegates for the first meeting of the House, but will be deferred for action until the next following meeting of the House unless

of an emergent nature. Any reports or resolutions received after the deadline may be introduced for action only by a majority vote of the House.

**Section 10. Reports by Non-Delegates.** Members of this Society's Councils and other bodies entitled to report to the House of Delegates but who are not members of the House of Delegates may report to the House in person and may participate in the discussion of matters pertaining to their reports, without vote.

**Section 11. Ad Hoc Commissions, Special Committees.** The House of Delegates shall foster and promote the purposes of the Society. It shall have the power to create ad hoc commissions or special committees from the general membership of the Society, or from the public at large, and may assign to such commissions or committees duties not in conflict with those of the Society's boards, officers, and councils, provided that the term of office of such ad hoc commissions or committees may not extend beyond the next Annual Meeting.

**Section 12. Reference Committees.** The House shall authorize the Speaker to create reference committees from elected Delegates and Alternates for the expeditious conduct of House business, decisions of such committees becoming final upon approval by the House after appropriate discussion.

The Judicial Council shall act as a reference committee for the House in any and all questions relating to component society charters, as required, and shall receive from the House all questions of an ethical nature which are brought before it.

Reference Committee charges shall be specified in the Standing Rules of the House of Delegates. Material to be referred to Reference Committees shall be determined by subject matter and assigned by the Speaker of the House.

One such reference committee shall be known as the Committee on Constitution, Bylaws and Credentials, to consist of eight members, no two of whom shall be from the same component society, and who shall be appointed by the Speaker of the House for a term expiring with the sine die adjournment of the Annual Meeting next following that at which they were appointed. This Committee shall examine and report to the House of Delegates upon the annual report of component societies and upon the credentials of all Delegates and Alternates.

**Section 13. Reference of Charter Questions.** As indicated in Chapter II, Section 2, the House of Delegates shall receive the recommendation of the Judicial Council before taking final action on any matter relating to the charter of a component society, either to issue or revoke.

**Section 14. Judge of Own Membership.** The House of Delegates shall be the final judge of the qualifications of members of the House of Delegates.

**Section 15. Election and installation.** Except as otherwise provided, all persons elected by the House of Delegates shall assume office at the end of the Annual Meeting.

#### **Section 16. Recall.**

a. The House of Delegates may at any Meeting by a two-thirds majority vote of accredited members of the House registered at the Meeting, remove any person elected by the House from any elected position, with or without cause. Recall may be initiated by a petition signed by ten percent of the Active Members of Colorado Medical Society, by fifty percent of the Delegates to the House of Delegates, or by a majority of the Board of Directors. Consideration of recall by the House shall be handled as specified in the Standing Rules of the House.

b. Except for District II, a majority of the voting membership of component societies within a District may vote to remove from office with or without cause their elected Director on the Colorado Medical Society Board of Directors when the Director is considered unsatisfactory in performance of his duties. In District II a majority of the voting membership or its delegated governing body of the nominating component society may perform this function.

### **Chapter V — Board of Directors**

**Section 1. Composition.** The Board of Directors shall consist of eighteen Directors, including the President, President-elect, Immediate Past President, and fifteen other Directors to be chosen as provided in the Bylaws. The Speaker of the House shall be an ex officio non voting member of the Board.

**Section 2. Powers and Duties.** The Board shall have charge of the property and financial affairs of the Society, and shall perform such other duties as prescribed by law or as provided in these Bylaws governing directors of corporations. The Board shall serve as the policy-making authority of the Society between meetings of the House of Delegates. It shall carry out policies established by the House and manage the organization between meetings of the House. It shall not act in contravention of House actions, except in those situations in which the overriding interests of the Society require immediate action inconsistent with but not foreseen by past policies adopted by the House. The Board shall fill, pending the next Annual Meeting of the House of Delegates, any vacancies in any Society positions to be filled by the House of Delegates, except the offices of President and President-elect. It shall have the authority to create and abolish committees. The Board shall provide leadership to administrative staff, Councils and Committees. The Board shall employ an Executive Vice President as chief administrative officer of the Society, whose duties shall be defined in the Society's Standing Rules and who shall serve as secretary of the Society as required by law.

**Section 3. Chairman of the Board.** The President shall serve as Chairman of the Board.

**Section 4. Meetings.** The Board shall meet regularly to carry out its responsibilities as specified in Section 2 above. Special meetings of the Board may be called at any time by the President or by the Executive Committee.

**Section 5. Executive Committee.** There shall be an Executive Committee of the Board of Directors composed of the President, President-elect, Immediate Past President, Treasurer and one member of the Board of Directors to be selected by the Board of Directors. The Executive Vice President shall serve ex officio without vote on the Executive Committee and on the Board of Directors. The Executive Committee shall act for the Board in emergency or in other unusual situations between meetings of the Board, and shall report all its actions in full at the next regular meeting of the Board, for review and appropriate action by the Board.

**Section 6. Committee on Committees.** The President-elect shall be Chairman of a Committee on Committees which shall include the President, Immediate Past President, Speaker and Vice Speaker. The Committee on Committees shall make recommendations to the Board of Directors for (a) charges of the Councils and committees, (b) membership on Councils and committees to include Council and committee chairmen and Council vice chairmen, and (c) annual sunset evaluation of all CMS Councils and committees.

### **Chapter VI — Officers and Other Elected Persons**

**Section 1. Designation.** The officers of the Society shall be the President, President-elect, Speaker, Vice Speaker, Immediate Past President, and the Treasurer. There shall be fifteen Directors elected by the House of Delegates. The House of Delegates also shall elect a total of nine Judicial Councilors, twelve members of a CMS Grievance Committee, and any Delegates and Alternate Delegates to the American Medical Association. Regardless of terms of office, all shall serve until their successors have been elected and installed.

**Section 2. Terms of Office.** For the purpose of terms of office a year shall be held to mean the period of time from the end of one Annual Meeting to the end of the next Annual Meeting. The President-elect shall be elected for a term of one year, upon the expiration of which term he automatically shall assume office as President for a term of one year. The terms of the fifteen Directors shall be four years each, provided that the terms shall be adjusted and arranged so that as nearly as possible one-fourth shall expire every year. Directors may serve up to two (four-year) terms of full continuous service. The Speaker and Vice Speaker each shall be elected for a one year term, for no more than three terms in each office. The Treasurer shall be elected annually by the Board of Directors, from among the Directors. Judicial Councilors shall be elected for terms of three years each, so arranged that terms of three Judicial Councilors shall expire each year. The Grievance Committee members shall be elected for terms of three years each, so arranged that the terms of four Grievance

Committee members shall expire each year. The Delegates to the American Medical Association, and an Alternate for each such Delegate, shall be elected in such numbers and for such terms as the Bylaws of the American Medical Association may prescribe.

**Section 3. Length of Term of Office of Judicial Councilors and Grievance Committee Members.** Judicial Councilors each may serve up to three (three-year) terms of full continuous service. Grievance Committee members each may serve up to two (three-year) terms of full continuous service. Any Member who has served the maximum number of terms allowed for any of the above positions shall not be eligible to serve in that position again until one year has elapsed from the date of termination of the last term of service.

**Section 4. Eligibility to Office.** Persons named in Section 1 of this Chapter shall hold only one such position at any one time, and except for a Grievance Committee member or Director, may not be elected to any other position named in Section 1 for any part of the term for which the person was originally elected. Persons elected to any position named in Section 1 shall have been Active Members of the Colorado Medical Society for at least two years immediately preceding election. In the event any such person shall cease to be an Active Member of the Society during the term for which elected, the position shall be vacated immediately.

**Section 5. Powers and Duties of Officers and Other Elected Persons.**

**a. President.** The President shall represent the entire membership and the best interests of the Society. He shall exercise personal leadership in the motivation of officers, Directors, councils and committee members, staff and the membership. He shall influence the establishment of goals and objectives for the Society during his term of office. The President shall be the official spokesman for the Colorado Medical Society, but may assign this responsibility to the Executive Vice President or others as he sees fit. He shall serve as Chairman of the Executive Committee. He shall serve as Chairman of the Board of Directors. He shall support and defend policies and programs adopted by the House of Delegates and the Board of Directors. The President may make suggestions in writing at any time to the House of Delegates or to any board, council or committee. He shall be an ex officio non voting member of all councils and committees of the Society. The President shall have additional duties assigned by the House of Delegates or the Board of Directors which are not inconsistent with the Bylaws. Each year the President and the Board of Directors shall approve the President's Position Description for that year, which shall be included in the Standing Rules of the Board of Directors.

**b. President-elect.** The President-elect shall, during his term as such, familiarize himself with the duties which will be his as President, and shall perform such other duties and be responsible for such special projects as are delegated by the President or

as may be ordered by the House of Delegates. The President-elect shall act for the President in his absence or disability. He shall be Chairman of the Committee on Committees. The President-elect shall help formulate Society policy, and shall assist the President, upon request, in visiting component societies. If the office of President becomes vacant the President-elect shall succeed to the presidency, to serve as President for the unexpired term and for the term to which he was elected. The Position Description shall be included in the Standing Rules of the Board of Directors.

**c. Speaker.** The Speaker shall preside over all meetings of the House of Delegates and shall perform such other duties as custom and parliamentary usage require. As leader of the House of Delegates the Speaker shall provide continuity from the House to the Board of Directors by serving as a non voting ex officio member of the Board. The Speaker shall be familiar with parliamentary procedure. The Position Description shall be included in the Standing Rules of the Board of Directors.

**d. Vice Speaker.** The Vice Speaker shall officiate for the Speaker at House of Delegates meetings in the Speaker's absence or at his request. The Vice Speaker shall, during his term as such, familiarize himself with the duties which will be his as Speaker, and shall be familiar with parliamentary procedure. If the office of Speaker becomes vacant the Vice Speaker shall succeed as Speaker, to serve as Speaker for the unexpired term.

**e. Immediate Past President.** The Immediate Past President shall serve as a voting member of the Board of Directors and of its Executive Committee for the year immediately following his presidency, and shall have such duties as the Board or the President may from time to time designate.

**f. Treasurer.** The Treasurer shall be Chairman of the Colorado Medical Society's Finance Committee, and as such shall report on the finances of the Society at Board meetings and to the House of Delegates if requested.

**g. A.M.A. Delegates and Alternates.** Delegates and Alternate Delegates to the American Medical Association shall attend annual and interim conventions and special conventions of the House of Delegates of the American Medical Association. They shall faithfully represent this Society and its official policies in the A.M.A. House.

**Chapter VII—Judicial Department**

**Section 1: Composition.** The Judicial Department shall consist of two branches: (i) The Unified Grievance Committee, which shall include the twelve-member CMS Grievance Committee, the Component Grievance Committees, and the Ad Hoc Component Grievance Committees of all Component Societies; and (ii) the Judicial Council, the Component Boards of Censors and the Ad Hoc

Component Boards of Censors of all Component Societies.

It is intended that the committees or other groups of the Judicial Department, as well as all other Colorado Medical Society review committees, while performing review of medical practice of members of Colorado Medical Society, shall qualify, by the nature of their organization and their functions, with the provisions of Article 43.5 of Title 12, Professional Review-Health Care, of the Colorado Revised Statutes, 1973.

## **Section 2: Unified Grievance Committee.**

**a. Composition.** The Unified Grievance Committee shall consist of the CMS Grievance Committee, of twelve members as provided in Section 2 of Chapter VI of these Bylaws, the Component Grievance Committees of all Component Societies which have established such committees, and Ad Hoc Component Grievance Committees appointed by the CMS Grievance Committee. None of such Component Society Grievance Committees or Ad Hoc Component Grievance Committees shall consist of less than three members.

**b. Duties and Powers.** The Unified Grievance Committee, acting through the CMS Grievance Committee, the Component Grievance Committees, and the Ad Hoc Component Grievance Committees as directed by the CMS Grievance Committee, shall have the following duties and powers:

(1) The investigation and supervision of the ethical deportment of the members of the Society, and the preparation of periodic recommendations for improvement of professional conduct;

(2) The investigation and review of questions of unprofessional conduct and the quality of care performed by physicians who are CMS members, including the physician's professional qualifications, clinical competence, mental or emotional stability, physical condition, or any other matter affecting the quality of care provided by that physician;

(3) The prosecution before appropriate adjudicatory bodies of CMS of charges against any CMS member whom the Unified Committee considers guilty of unprofessional conduct, or the reference of charges of misconduct to other adjudicatory or disciplinary agencies;

(4) The investigation and resolution of complaints against CMS members which do not involve misconduct by such members of the Society; and

(5) The performance of binding arbitration, with the consent of all parties involved, when such is desirable for conflict resolution.

**c. Direction and Supervision by CMS Grievance Committee.** The CMS Grievance Committee shall have the authority to exercise direction and supervision over the functioning of the en-

tire Unified Grievance Committee. Such shall include, without limitation, authority:

(1) To assign complaints against CMS members of unprofessional conduct for investigation:

(a) to the Component Grievance Committee of the Component Society of which that physician is a member;

(b) to the Component Grievance Committee of another Component Society; or

(c) to an Ad Hoc Component Grievance Committee.

(2) To refer a complaint of unprofessional conduct against a member of CMS to Colorado Board of Medical Examiners, or to any other investigative or adjudicatory bodies as may have a legitimate interest in such complaint.

(3) To make disclosure regarding complaints of unprofessional conduct to such other committees of CMS as it may deem to have a need for that information.

(4) To adopt rules, after review by the Unified Grievance Committee, and with the approval of the Judicial Council, governing matters within the jurisdiction of the Committee. Such rules shall be binding upon all members of the Society, after publication and distribution to the membership.

(5) To appoint an Ad Hoc Component Grievance Committee if there shall be no Component Grievance Committee in that Component Society, or if that Component Grievance Committee shall not be qualified to act under the existing circumstances. An Ad Hoc Component Grievance Committee shall be appointed to consider one or more specific complaints of unprofessional conduct as stated in its appointment, which shall consist of not less than three physician members of CMS. It may include one or more members of the CMS Grievance Committee, one or more members of another Component Grievance Committee, or one or more members of CMS who are not members of any Grievance Committee. Its responsibilities and authority shall terminate with the disposition of the complaint or complaints referred for its consideration.

(6) To prepare and publish such reports of its activities as it deems proper.

## **d. Committee Officers.**

(1) **CMS Grievance Committee.** The CMS Grievance Committee shall elect annually from its membership Committee officers, including, a Chairman, Vice Chairman and a Secretary.

(2) **Component Grievance Committees.** Officers of a Component Grievance Committee shall be chosen as provided in the By-Laws of that Component Society.

### Section 3: Judicial Council.

a. **Composition.** The Judicial Council shall be composed of nine Judicial Councilors, who shall be elected to represent numbered districts, including specific Component Society jurisdictions, as follows:

(1) **District No. 1:** Denver Medical Society (Denver County), Student Medical Society and Housestaff Medical Society.

(2) **District No. 2:** Adams County-Aurora Medical Society, Arapahoe Medical Society and Clear Creek Valley Medical Society (Adams, Arapahoe, Douglas, Elbert, Clear Creek, Jefferson and Gilpin Counties).

(3) **District No. 3:** El Paso County Medical Society (El Paso and Teller Counties).

(4) **District No. 4:** Eastern Colorado, Morgan County, Northeast Colorado and Washington-Yuma Counties Medical Societies (Morgan, Lincoln, Cheyenne, Kit Carson, Logan, Sedgwick, Phillips, Washington and Yuma Counties).

(5) **District No. 5:** Boulder, Larimer and Weld County Medical Societies (Boulder, Larimer and Weld Counties).

(6) **District No. 6:** Mt. Sopris, Mesa County and Northwestern Colorado Medical Societies (Garfield, Eagle, Pitkin, Rio Blanco, Mesa, Grand, Jackson, Moffat and Routt Counties).

(7) **District No. 7:** Curecanti, Delta County, La Plata and Montelores Medical Societies (Delta, Montrose, Gunnison, Ouray, San Miguel, Archuleta, Dolores, La Plata, Montezuma and San Juan Counties).

(8) **District No. 8:** Chaffee County, Intermountain, Lake County, and San Luis Valley Medical Societies (Chaffee, Park, Hinsdale, Lake, Summit, Alamosa, Conejos, Mineral, Rio Grande and Saguache Counties).

(9) **District No. 9:** Fremont County, Huerfano County, Las Animas County, Otero County, Southeastern Colorado and Pueblo County Medical Societies (Fremont, Custer, Huerfano, Las Animas, Otero, Crowley, Bent, Prowers, Kiowa, Baca and Pueblo Counties).

Each Judicial Councilor shall have been a resident of the District for which he is elected for at least one year next preceding his election, and his permanent removal from that district shall automatically create a vacancy in his office.

#### b. Jurisdiction.

(1) **Original Jurisdiction.** The Judicial Council shall have and exercise jurisdiction over and decide finally for this Society:

(a) all questions of ethics or discipline submitted to it by the House of Delegates, the Board of Directors, the Unified Grievance Committee, or the Reference Committee on Constitution, Bylaws and Credentials;

(b) all controversies between Component Societies or between members of different Component Societies whenever such controversies cannot be readily resolved by the Grievance Committee; and

(c) all questions requiring interpretation of the Constitution and Bylaws of this Society.

(2) **Appellate Jurisdiction.** The Judicial Council shall receive, hear and finally decide appeals from:

(a) Boards of Censors regarding questions of misconduct;

(b) Component Societies

All questions of an ethical nature brought before the House of Delegates of the Society shall be referred to the Judicial Council, without debate.

c. **Other Duties and Powers.** The Judicial Council shall exercise the supreme judicial powers of the Society, and shall have the following duties and powers in addition to those mentioned above in Section b:

(1) To approve the rules adopted by the CMS Grievance Committee to govern matters within the jurisdiction of that committee;

(2) To adopt rules governing the procedures to be followed by the Judicial Council, Component Boards of Censors, and Ad Hoc Boards of Censors, in the performance of their adjudicatory duties;

(3) To exercise general direction and supervision over the operation of the entire Judicial Department;

(4) To appoint an Ad Hoc Board of Censors, of not less than three members, to serve in any Component Society where no qualified Board of Censors exists, to hear and make findings regarding only those charges of unprofessional conduct specifically stated in its appointment;

(5) To advise concerning the policies and procedures to be followed by any other CMS review committee; and

(6) To make reports to the House of Delegates, not for approval or rejection, but for information only, on matters within its jurisdiction.

#### d. Basis for Discipline—Disciplinary Penalties.

(1) In carrying out its duties in disciplinary cases, the Judicial Council may discipline any member of the Society who has been found guilty of:

(a) unprofessional conduct as provided by

law; or one or more negligent acts in gross violation of accepted standards of medical care, or more than one act of simple negligence in violation of accepted standards of medical care occurring with such repetition and frequency as to indicate a pattern of unacceptable medical practice by that physician;

(b) the violation of the code of ethics as adopted by CMS;

(c) the conviction of a felony in Colorado or elsewhere; or

(d) the willful violation of the Society's Constitution and Bylaws.

(2) A CMS member found guilty of any of the foregoing may be disciplined:

(a) by reprimand in closed session of the Council, in person or by letter;

(b) by open reprimand or censure before an executive session of the member's Component Society;

(c) by probation stipulated by the Judicial Council;

(d) by suspension from membership for a time fixed by the Council;

(e) by expulsion from membership; or

(f) by any appropriate combination of such penalties within the judgement of the Council.

(3) Any member who is determined to be guilty of unprofessional conduct shall be reported to the Board of Medical Examiners as required by law.

**e. Meetings—Rules of Procedures.** The Judicial Councilors shall be available to meet as a reference committee when needed during any Meeting of the House of Delegates on any and all questions relating to Component Society charters, and on questions of an ethical nature which are before the House. Meetings of the Judicial Council shall be held during each Annual and Interim Meeting, and additional meetings shall be called as needed by its Chairman or may be called by joint action of any three Judicial Councilors.

**f. Officers.** The Judicial Council shall elect annually from its own membership, a Chairman and a Vice Chairman. The CMS Executive Vice President shall serve as Secretary for the Judicial Council.

**Section 4: Boards of Censors.** A Component Board of Censors and an Ad Hoc Board of Censors shall:

a. Hear and make findings, subject to the right of appeal to the Judicial Council, regarding charges of unprofessional conduct by a member of that Component Society presented by the Component Grievance Committee thereof or by an Ad Hoc Component Grievance Committee of that Society.

b. Issue opinions on questions of ethics, submitted to it by the governing body of that Component Society.

**Section 5: Procedure of CMS Review Committees.**

**a. Due Process.** Any complaint against a physician member of CMS, whether presented to the CMS Judicial Department or to any other CMS review committee, shall be investigated, considered and disposed of in accordance with established rules of due process.

**b. Initial Investigation.** Wherever possible and practicable to do so, the investigation of a charge against a CMS member of unprofessional conduct shall be conducted by the Grievance Committee of the Component Society of which that physician is a member. If that Component Society has no Grievance Committee capable of or qualified to make such an investigation, the investigation may be referred to an Ad Hoc Component Grievance Committee to be appointed by the CMS Grievance Committee.

**c. Hearing by Board of Censors.** Charges of unprofessional conduct preferred by a Component Grievance Committee shall be heard by the Board of Censors of that Component Society, or, if none, then by an Ad Hoc Component Board of Censors, appointed by the Judicial Council.

**d. Punishment for Contempt.**

(1) **Refusal to Cooperate.** If a CMS member respondent shall willfully refuse to cooperate in connection with the investigation or adjudication by the Judicial Department of a complaint against him and is guilty of contempt of the CMS Judicial Department, punishment for such contempt may be imposed by the Judicial Council as provided below.

(2) **Contempt Proceedings.** Contempt charges may be preferred with the CMS Judicial Council by the body before whom such contempt occurred. A hearing shall be held by the Judicial Council consistent with prevailing principles of due process.

(3) **Punishment.** If the respondent shall be found guilty by the Judicial Council of willful contempt, the Judicial Department may impose punishment consisting of suspension of the respondent's privileges of membership in CMS for a time certain, not greater than one year, or until the respondent shall purge himself of contempt.

(4) **Appeal From Judicial Council Contempt Decision.** The respondent shall have a right of appeal from a contempt decision of the Judicial Council. Such decision shall be taken to an Ad Hoc Board of Appeal of three (3) members, who shall be appointed, for the purpose of that one appeal only, by the President of the Colorado Medical Society.

**e. Appeal From Component Boards of Censors.** Appeal from the ruling of a Component Board of Censors or an Ad Hoc Component Board of Censors shall be taken to and acted upon by the Judicial Council. The person who has filed a complaint of unprofessional conduct against a CMS member as well as the physician complained

against shall have the right to appeal from the decision of the Board of Censors.

**Section 6: Confidentiality of Records and Procedures.** Except as otherwise provided by rules adopted by the CMS Grievance Committee and the Judicial Council, all proceedings conducted by any committee or any other group within the Judicial Department shall be confidential and the records of that proceeding and of the committee or other group shall be confidential and shall not be made public. The CMS Grievance Committee is authorized to adopt rules, with the approval of the Judicial Council, which will permit disclosure of information regarding the quality of medical practice as performed by members of CMS to other CMS review committees.

## **Chapter VIII — Society Meetings and Special Meetings**

**Section 1. Meetings of Society.** The Society shall hold Annual and Interim Meetings of the House of Delegates each year. These Meetings may include scientific and educational sessions.

**Section 2. Time and Place of Meetings.** The time and place of the Annual and Interim Meetings shall be approximately six months apart as designated by the Board of Directors.

**Section 3. Special Meetings of Society.** Special Meetings of the House of Delegates may be called by (1) vote of the House at a previous meeting, or by (2) order of the Board of Directors. A Special Meeting must be called upon petition signed by at least one-third of the accredited members of the House of Delegates representing at least one-fifth of the component societies, and presented to the Executive Vice President.

## **Chapter IX — Elections**

### **Section 1. Nominating Procedure.**

a. The House of Delegates shall, from its accredited Delegates and Alternates, elect a Nominating Committee consisting of nine members from the Colorado Medical Society Districts as provided in Subsection c, below. One member each shall be elected from Districts I, III, IV and V. From District II, one member shall be elected from each of the component societies of Aurora-Adams County, Arapahoe, Boulder, Clear Creek Valley, and Denver Medical Society. The member of the Nominating Committee representing Denver Medical Society shall represent the Housestaff Medical Society and the Student Medical Society. No member of the Committee may serve more than four consecutive one year terms. The Board of Directors shall select two Board members to serve as ex officio non voting members of this Committee in addition to the nine elected members. The Committee shall be elected during each Annual Meeting and shall hold an open forum at each Interim Meeting to hear prospective nominees. The Nominating Committee shall actively solicit recommendations from the component

societies for all elected positions before each Interim Meeting. The Committee is to report its recommendations, which shall be carried in the House of Delegates Handbook, to the first Annual Meeting following its election. The Committee shall be charged with the responsibility of nominating one qualified person for each elective office, including Judicial Councilors, but not Historian and members of Councils who are nominated by the Board of Directors, to be filled at the next Annual Meeting. Additional nominations may be made from the floor at any time.

b. Separate slates of nominees shall be submitted for each of the following: A.M.A. Delegate, and A.M.A. Alternate Delegate.

1. First, an election shall be held for the office of Delegate, from the slate of Delegate nominees.

2. A second election shall then be held for the office of Alternate Delegate from the slate of Alternate Delegate nominees.

c. For the purpose of electing members of the Board of Directors other than the President, the President-elect, and the immediate Past President, the state shall be divided into Districts composed of the component societies, as follows:

District I: Larimer County Medical Society, Morgan County Medical Society, Northeast Colorado Medical Society, Washington-Yuma Counties Medical Society, Weld County Medical Society.

District II: Adams County-Aurora Medical Society, Arapahoe Medical Society, Boulder County Medical Society, Clear Creek Valley Medical Society, Denver Medical Society, Housestaff Medical Society, Student Medical Society.

District III: Eastern Colorado Medical Society, El Paso County Medical Society, Intermountain Medical Society, Lake County Medical Society.

District IV: Chaffee County Medical Society, Fremont County Medical Society, Huerfano County Medical Society, Las Animas County Medical Society, Otero County Medical Society, Pueblo County Medical Society, San Luis Valley Medical Society, Southeastern Colorado Medical Society.

District V: Curecanti Medical Society, Delta County Medical Society, La Plata Medical Society, Mesa County Medical Society, Montelores Medical Society, Mount Sopris Medical Society, Northwestern Colorado Medical Society.

Of the Directors to be elected, two shall be elected from each of Districts I, III, IV and V, and a total of seven shall be elected from District II.

A component society in Districts I, III, IV or V which has half or more of the Active Members in the District and which does not have a member on the Board, shall be entitled to have elected at least one Director to serve on the Board.

Of the seven Directors to be elected from District II, one each shall be elected from Adams County-Aurora Medical Society, Arapahoe Medical Society, Boulder County Medical Society and the Clear Creek Valley Medical Society, and three shall be elected from the Denver Medical Society, to also represent the Student Medical Society and the Housestaff Medical Society.

Recommendations to the Nominating Committee will be made from Districts I, III, IV and V, and from five component societies which shall have Directors in District II, and shall include recommendations of at least one nominee for each Director to be elected from that District or component society.

In Districts I, III, IV and V, the recommendations for each of those Districts shall be by majority action of the component societies in that District. In District II the recommendations for nominees shall be by the five primary component societies which are represented by Directors. The action of each component society in either case shall be taken by the governing body of that society.

Timely notice shall be given to the Districts and component societies by the Executive Office, so that recommendations can be considered by the Nominating Committee and included in the Handbook reports. The Districts will submit their candidates for the Board of Directors to the Nominating Committee no later than 15 days prior to the deadline for submission of reports to the Handbook.

The Nominating Committee must choose from those persons recommended as provided above. If the required number of recommendations has not been received from any District or any component society in District II, the Nominating Committee shall be free to make whatever nomination it sees fit from that District or from the appropriate component society in District II.

d. Directors, Officers, Judicial Councilors and Grievance Committee members may not be elected to more than one position.

**Section 2. Balloting.** All elections shall be by secret ballot; provided, that if after reasonable time has been given by the Chair only one person has been nominated for an office to be filled, the Speaker may close the nominations and call for election by viva voce vote. A majority of all votes cast for any individual office shall be necessary to elect, and if on any ballot no nominee shall receive a majority of votes cast, the name receiving the smallest number of votes shall be dropped from the list of nominees and the balloting proceed in this manner until one person is elected.

**Section 3. Vacancies.** Elections to fill vacancies shall be for the unexpired term. If the President and President-elect are unable to serve, as determined by a two-thirds vote of the voting membership of the Board of Directors, the immediate Past President shall serve as Acting President, until a new President

and/or a new President-elect have been elected and installed at the next meeting of the House of Delegates. If the Past President is unable to serve, the Treasurer shall serve as Acting President until a new President and/or President-elect have been elected and installed at the next meeting of the House of Delegates.

## Chapter X — Councils and Committees

**Section 1. Councils.** Except as the Bylaws otherwise provide, the Board of Directors shall direct the functions of the Society through councils whose titles and duties shall be prescribed in the Society's Standing Rules. Councils shall submit recommendations concerning Society policy to the Board of Directors for action as indicated and transmittal to the House of Delegates for its decision. Council members shall be Active Members of the Colorado Medical Society, and shall be elected by the House after consideration of nominations submitted by the Board (following recommendations of the Committee on Committees) or nominations from the floor. Council nominations to the House shall include chairmen and vice chairmen.

**Section 2. Committees.** Chairmen and members of committees shall be nominated by the Committee on Committees and appointed by the Board of Directors. Voting members of committees shall be Active Members of the Colorado Medical Society, unless otherwise determined by the Board of Directors.

## Chapter XI — Quorum at Meetings of Boards, Councils and Committees

A majority of the voting membership of a board, council or committee shall constitute a quorum for the transaction of business.

## Chapter XII — Finances

### Section 1. Fiscal Year and Annual Dues.

a. **Fiscal year.** The fiscal year of the Society shall be from October 1 through September 30.

b. **Annual Dues.** Dues for all classifications of membership in the Colorado Medical Society shall be fixed by the Colorado Medical Society Board of Directors annually. Annual dues for each calendar year shall become due and payable to the Colorado Medical Society on October 1. The Board of Directors may excuse or reduce dues or assessments in individual cases in any class of membership where there appear to be extenuating circumstances.

c. **Remittance of Dues.** The secretary of each component society shall forward to the Colorado Medical Society's executive office all Society dues collected by the component society. These shall be accompanied by certification of names, membership numbers, addresses, classifications and subclassifications of the members from whom the collections were made, and the date of the official action of the component society effecting election to member-

ship or change of classification of membership if applicable. When properly completed and accompanied with the appropriate remittance, this shall constitute certification of membership. In unusual cases, a member may request approval by the Society's Board of paying annual dues in two installments, not more than four months apart.

**Section 2. Suspension.** If annual dues have not been submitted to the secretary of the component society by January 15, the member shall be held as suspended from membership, and all privileges of membership shall cease pending reinstatement. A suspended member will be reinstated when the suspension is removed by the proper report and remittance. If the suspension for non-payment of annual dues is not so removed, membership of the suspended member shall terminate as of June 30, without prejudice as to again applying for membership; provided, that no physician shall be eligible to again apply for membership while any special assessment remains unpaid unless the special assessment occurred more than five years prior to application. Penalties imposed in the Bylaws for suspension shall not be removed by reinstatement under this section.

**Section 3. Part Year Dues.** Members elected after July 1 but prior to December 1 shall be assessed dues for the remainder of the dues year in an amount equal to one-half of the current annual dues for that subclassification. A member elected after December 1 of any calendar year shall be assessed no dues for the remainder of that calendar year, but, upon making application or upon election as determined by the component society, shall remit annual dues for the next calendar year, and upon election shall be credited as a member from the date of such election throughout the next dues year.

**Section 4. Appropriations; Budget.** All funds of the Society shall be expended only under the direct supervision of the Board of Directors and all commitments for expenditure by the Society shall be first approved by the Board of Directors. No one legally, morally, or financially may obligate the Society without the prior approval/consent of the Society's Board of Directors. The Board of Directors shall submit an annual budget to the House of Delegates for the ordinary expenses of the Society, which shall take precedence over all resolutions providing for appropriations.

**Section 5. Special Assessments.** The necessity for and amount of any special assessment shall be determined by the Board of Directors. Assessments shall apply only to members of record at the date of enactment. Any such special assessment shall become due on such date as may be fixed by the Board of Directors and shall become delinquent 45 days thereafter; provided, that the due date of such assessment shall not be less than 30 days from the date of the mailing of notice. The president and secretary of each component society shall be notified by written notice of any such special assessment, stating the amount of such assessment, the

date it becomes due and the date it becomes delinquent. Any member whose special assessment has not been received by the Society within 45 days after the due date shall be held as delinquent. If the delinquency with respect to the payment of a special assessment is not removed by a remittance to the secretary of the component society within 60 days after the due date of such assessment, the delinquent member shall be held as suspended from membership and all privileges of membership shall cease pending reinstatement. The suspension by reason of nonpayment of any special assessment shall be operative if annual dues for the current year have been paid.

## Chapter XIII — Official Publications

**Section 1. Official Publication.** The Board of Directors shall provide for and supervise the publication of official publications of the Society. Subject to advice of the House of Delegates the Board shall have authority to enter into agreements with other state medical societies or associations whereby they may, if it is mutually desirable, designate the Society's official publication as the official journal of their organizations.

**Section 2. Notices.** Except as otherwise provided for by law or in the Constitution or Bylaws, publication of any notice in the official publication shall be considered as full notice to all members of the Society for any purpose.

## Chapter XIV — Parliamentary Procedure

The current edition of Sturgis "Standard Code of Parliamentary Procedure" shall govern the proceedings of any and all meetings of the Society, except as otherwise provided in the Society's documents or in the law.

## Chapter XV — Principles of Ethics

Members of the Colorado Medical Society and its component societies shall be bound by the code of ethics adopted by the Colorado Medical Society Judicial Council. As interpreted for this Society by the Judicial Council, such code of ethics shall be controlling in all decisions of the Judicial Council, the Grievance Committee, and the judicial bodies of all component societies.

## Chapter XVI — Seal

The Society shall have a common seal, and may alter or change the same as provided by law.

## Chapter XVII — Referendum

The House of Delegates at any Meeting, by at least a majority vote of the accredited members of the House registered at that Meeting, may order a general referendum upon any question pending before the House, and submit the question to the whole Active Membership of the Society for vote. Such referendum shall be conducted by mail ballot in

a manner as the House of Delegates may prescribe. If the persons voting shall comprise a majority of all the Active Members of the Society, a majority of such vote shall determine the question.

#### Chapter XVIII—Colorado Medical Society Policies

**Section 1. House of Delegates Standing Rules.** The House of Delegates may adopt standing rules not in conflict with the Constitution and these Bylaws, to govern its proceedings and to further any of the purposes of the Society, and may amend or repeal such rules, provided that the proposed standing rule has been presented in writing in open meeting of the House and has laid upon the table for one day before being voted on.

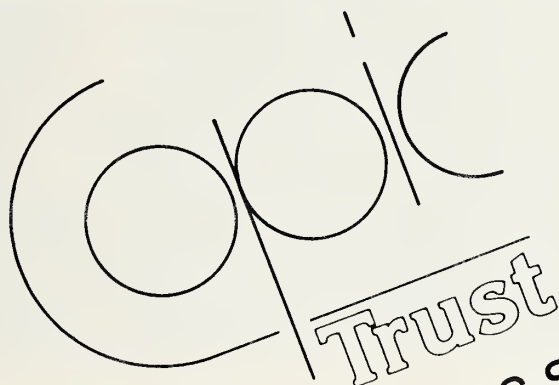

**Section 2. Standing Rules of the Board of Directors.** By a two-thirds vote of all members of the Board of Directors, the Board may adopt standing rules not

in conflict with the Constitution, Bylaws and Standing Rules of the House, to govern its proceedings and to repeal such rules by a two-thirds vote of all members of the Board of Directors, provided that the proposed standing rule has been presented in writing prior to the meeting of the Board of Directors.

**Section 3. Policy Statements.** Either the House or the Board may adopt policy statements that they may find desirable.

#### Chapter XIX — Amendments

These Bylaws may be amended at any Meeting by a two-thirds affirmative vote of the accredited members of the House of Delegates registered at that Meeting, provided the proposed amendment has been presented in writing in open meeting of the House and has laid upon the table for at least one day before being voted on.

**Announcing the New Colorado Medical Society Member Insurance Plan—A Lifeline for Your Dollars!**

CMS now makes available to you, your families and employees a new and complete program of insurance.

Considerable time, research and planning have gone into finding the most thorough and inclusive plans possible for CMS members. Programs now available to you include:

- Hospital/Major Medical Insurance
- Office Overhead Expense Protection
- Disability Coverage
- Accident Insurance
- Life Insurance
- "Key Man" Insurance

And there's more... Through the CMS plans, you can obtain a varied line of financial planning services to assist you in the management of your practice or your personal finances. These services include:

- Premium Financing
- Portfolio Guidance
- "Buy-Sell" Agreements
- Estate Planning
- Return of Dues

You can obtain professional insurance counseling! The CMS benefit consultants, William Blair Smith and Michael J. Prostrollo, are specialists in developing group insurance programs. Through their com-

bined years of professional experience in the insurance markets, they are able to choose the best programs available for CMS members.

Save money! This new plan will save you money, both now and in the future. Through CMS group purchasing power, you can save money now through our lower group insurance rates. In the future, you can save money through the comprehensive insurance coverage and financial planning services available to you through the CMS plan.

So you already have insurance? Investigate the CMS plan for possible lower premiums and better coverage.

Stay tuned... to *Colorado Medicine*! We are featuring an ongoing series of articles which details specific aspects and programs of the CMS insurance plan.

If you don't find what you want, call us! The CMS member insurance plan is designed to meet your needs. If there is an insurance program or financial planning service we haven't listed, call us! We'll help you find the kind of coverage you must have to meet your business and personal insurance requirements.

For more information on the CMS Membership Insurance Plan, just check any or all of the boxes below, detach and return the postage-paid card to CMS. Or, call the CMS Member Services Office at (303) 321-8590.

# DOCS

DOCTORS OFFICE COMPUTER SYSTEMS

## DOCS WORKS FOR YOU, YOUR STAFF, YOUR PATIENTS.

DOCS is a computer system that has been designed to meet the needs of Medical and Dental professionals. Installing a computer programmed with DOCS means that your practice runs more economically. Fewer mistakes are made. You and your staff waste less time on tedious paper work. The result? Increased return on receivables, improved practice information, fewer delinquent accounts. And that's just the beginning.

Because the computer takes care of menial paper work, your staff has time for more important duties, and you have more time for your patients. DOCS is simple for your staff to use. The computer asks a question, your office person enters the answer. DOCS will question invalid numbers, process insurance forms, and prepare billing, just to mention a few functions. Your patients benefit, too. Patients are registered more quickly, their records are immediately available without searching for files, and accounts are kept up-to-date. DOCS does all this and much more.

### THE DOCS SYSTEM PROVIDES

- |   |   |
|---|---|

## Help Available to Impaired Physicians

If you know of a colleague who has problems with drug or alcohol dependency, or if you think you may have a problem, talk to one of the members of the CMS Physician Health and Rehabilitation Committee. The chairman, John S. Avery, MD, may be reached by calling his office in Boulder, 440-3088.

The other members of the committee are:

Barry R. Berns, MD, Windsor, 686-7611  
Edmund Casper, MD, Denver, 893-7377  
Telford A. Davis, MD, Durango, 259-0094  
Franklyn M. Newmark, MD, Lakewood, 238-8719  
David R. Rice, MD, Aurora, 343-4655  
Richard E. Troy, MD, Grand Junction, 242-7697  
Paul T. Yoder, MD, La Junta, 384-8766

The Colorado Medical Society has had an impaired physician program for several years, at the direction of the CMS House of Delegates. The program is designed to assist physicians to confront their problems and find help. Physicians, family members and others also may gain access to the program by contacting the staff of the Division of Professional Relations and Medical Service at the CMS office in Denver, 321-8590. Physicians wishing to assist with the program are urged to contact the committee by calling 321-8590.

The Name of the Game:  
Kenneth A. Kahn, MD Discusses Long Term Care in Colorado—p. 154

The average age in the United States is rising. Americans are living much longer than ever before. Thus geriatric care will play a growing role in medicine. How do government regulations affect long term care? What are some of the problems faced by physicians with geriatric patients? Will there be enough physicians specializing in geriatric care to take care of the growing numbers of elderly patients? How should the medical society be involved in the area of long term care? See p. 154 for a thoughtful discussion by Dr. Kenneth A. Kahn of these and other issues relating to long term care.

# Hospital Prospective Payment System Becomes Law

by David L. Hlavac, Director,  
CMS Division of Medical Economics and Professional Relations

On April 20, President Reagan signed into law the Social Security Amendments of 1983 (HR 1900), following a relatively expeditious passage of the bill through Congress. The new bill establishes a system for prospective payment of Medicare-covered inpatient services based on diagnosis related groups (DRGs). Hospitals will be paid a fixed cost per discharge according to the discharge diagnosis of the patient. The new system covers all hospitals except psychiatric hospitals, rehabilitation hospitals, hospitals whose inpatients are primarily individuals under 18 years of age, and hospitals whose average length of stay is over 25 days.

## Payment Methodology

For each of the 467 categories of DRGs, the Department of Health and Human Services will establish nine regional rates, with an urban

and a rural rate within each category. In addition, DHHS will establish national urban and rural rates, resulting in a total of 20 rates. The system will be phased in over a period of three years, coinciding with the beginning of each hospital's reporting period on or after October 1, 1983.

In fiscal year 1984, the rate for hospital reimbursement will be divided, with 25 percent based on DRGs and 75 percent based on historical costs (according to the target amounts determined under existing law). Of the 25 percent that is DRG-based, 75 percent will be from the regionally adjusted rate and 25 percent will be from the nationally adjusted rate. In FY 1985, 50 percent of the reimbursement to hospitals will be DRG-based (of which 50 percent will be on the basis of regional rates and 50 percent on the

basis of national rates) and 50 percent will be based on historical costs. For the 1986 fiscal year, 75 percent of the reimbursement will be DRG-based (25 percent from regional rates and 75 percent from national rates) and 25 percent will be on the basis of historical costs.

By 1987, the schedule calls for the reimbursement rates to be based totally on DRGs, using the national rates only, but maintaining the urban-rural differentiation.

## Outlier Payments

Provisions were made for adjusting the payment to hospitals for cases which exceed the mean length of stay for some fixed number of days, or by a certain number of standard deviations, whichever is less (the so-called outliers). An amount is to be earmarked for payment for outlier cases which is to be not less than 5% nor more than 6% of total DRG-related payments.

## Prospective Payment Assessment Commission

An advisory panel comprised of 15 independent experts in the provision of financing of health care, to include physicians, employers, third-party payers and others, is to be appointed to provide consultation and guidance to the Secretary in the review and revision of the DRG system.

In addition to providing consultation on the need for revisions and adjustments, the Prospective Payment Assessment Commission will review the applicable percentage increase factor to be established for the DRG system and will make recommendations regarding changes in that factor.

## Adjustment

Provisions were made for updating the DRGs annually, with the rates to increase by a factor of the "market basket plus one percent" for FY 1984 and 1985. Thereafter, the Secretary of DHHS will have the discretion to establish the rate of increase, with the guidance of the advisory panel. The DRG classification system will be recalibrated at least once every four years beginning in 1986.

## Capital Related Expenses

The costs incurred by hospitals related to capital expenses will be allowed as a pass through until Oc-

## Grievance Of The Month

A thirty year old white female, Gravida I, Para I, had recently become pregnant for the second time and elected to change to an obstetrician in a large group. She had been referred to this obstetrician on the basis of a friend's recommendation.

She called the physician's office and made arrangements for an initial office visit. Her friend had given a very favorable recommendation about this physician's interaction with patients and so the woman was looking forward to the visit very much. On her arrival in the office to keep the appointment, she was met by the "physician's assistant" who proceeded to carry out all of the appropriate examinations and taking of the history. When the woman became aware that she was not going to see the physician at all she became very disappointed and let-down. Following this she decided to go to another private physician who did deliver her child uneventfully.

Some months later she received

a bill from the group physician for \$45. This disturbed her very much and she filed a complaint with the local grievance committee. She felt that her initial appointment should have been with the physician and not the physician's assistant, and she resented a charge which she thought was high for having only been able to see the physician's assistant.

It would appear that this is another example of a breakdown of communication between the patient and the physician's office as to what the initial office protocol would be, and this led to the problem.

When the local grievance committee discussed the matter with the physician, he was willing to make adjustments on the fee. It also provided an opportunity for the group of physicians to learn that if they were going to use physician's assistants, this should be made known to patients so that they can anticipate that interaction as a part of their total care.

# DO YOU NEED A COMPUTER?

**YES!**  
**MAYBE...**  
**NOT SURE?**

**Any more, it's a jungle out there:**

- \* Word Processors
- \* RAM Memory
- \* 300/1200 Baud Modems
- \* CPU's .....

**So DON'T go out on a limb,**

tober 1, 1986. Following that date, capital costs, including return on equity, will become a part of the prospective payment system. Congress made provisions for decreasing the payments for return on net equity by one-third beginning October 1, 1983.

## Medical Education

The direct costs associated with medical education will not be included in the DRG system, and will continue to be paid on a cost basis. Additional payments will be made to hospitals for the indirect costs of medical education.

## PROs

Congress voted to require that hospitals contract with a utilization and quality control peer review organization (PRO) servicing its area. Prior to October 1, 1984, no penalties will be assessed if there is no PRO operating in the hospital's area. However, after October 1, 1984, a hospital will be denied Medicare reimbursement if it has not contracted with a PRO, even if there

is no approved PRO in the area.

Among the items the PRO will be required to review will be: the validity of diagnostic information provided by the hospital for payment purposes; the completeness and adequacy of care; the appropriateness of care provided to outlier cases.

## Studies and Reports

Numerous studies and reports are required by the new bill. Among the reports to be provided to the Congress will be those that: explore the effectiveness of DRGs; discuss the effect of DRGs on hospitals and patients; examine the feasibility of phasing out the urban and rural rate differentials; and, by 1985, discuss the feasibility of including physician services in the DRG classification system.

The DRG system will undoubtedly have a profound impact on the medical care system, and future issues of *Colorado Medicine* will explore some of the likely effects of those changes and their relevance to physicians.

## Guidelines for Schedule II Narcotics

*The Colorado Medical Society Pharmacy Committee, with the approval of the Board of Directors and the 1983 House of Delegates, has developed general guidelines for the suggested use of Schedule II Narcotics. The guidelines are purposely general because these drugs have such varying uses.*

Within the Comprehensive Drug Abuse Prevention and Control Act of 1970, five schedules of controlled substances were established. Schedule II includes those drugs with legitimate medical uses that have the greatest abuse potential and greatest danger of severe dependence. Within this group are most of the narcotic analgesics, which are used for the treatment of pain.

The differences between morphine and its semi-synthetic surrogates have been considerably over-estimated. In equi-analgesic doses most of these drugs produce approximately the same incidence and degree of unwanted effects. Note that some of the narcotic analgesics are included in the Schedule III, IV, and V categories [e.g. codeine in combination products, codeine in low doses, and pentazocine (talwin), and propoxyphene (darvon)]. The Schedule II drugs include phenethyl derivative of meperidine (anileridine), propionanilide derivatives (fentanyl), meperidine (demerol, pethadol), codeine, hydromorphone (dilaudid), oxycodone (percocet, percodan, tylox), methodone (dolophine), oxymorphone (numorphan), hydrocodone (hycodan), levorphanol (levodromoran), alphaprodone (nisentil), morphine, and opium preparations (pantopon, etc).

This class of drugs is used for the treatment of pain. This most subjective complaint of pain in many instances is related to a specific physical problem such as cancer, post-surgical situations, obstetrical situations, trauma, etc. However, pain can also be related to non-physical complaints associated with psychiatric diseases, stress, depression, social problems associated

with substance abuse, etc. Guidelines for the treatment of pain in the former category can be easily established, but guidelines in the latter category are more difficult in that the category of non-physical complaints is established as a diagnosis by exclusion.

It is recognized that many clinical situations associated with pain may require therapeutic approaches that do not fit exactly into either of the above-mentioned clinical categories. The guidelines for the use of Schedule II drugs will, therefore, remain quite general in nature with a few well-defined clinical uses. In those instances where the drug is used, contraindications should be noted and potential toxicity and dependence carefully monitored. Drugs may be used as part of anesthesia protocol and their use is not covered by these guidelines.

The guidelines for the treatment of pain with Schedule II drugs are best associated with various clinical classifications of pain.

**Moderate Pain** — When pain is not too severe, codeine, oxycodone, and hydrocodone will provide

satisfactory relief. The more potent narcotic analgesics should be adequate while more specific therapy for the underlying cause of the pain is undertaken.

**Short Duration Pain** — A pain of short duration, such as that felt during a diagnostic procedure, is best treated with a narcotic analgesic that has a short duration of action. Fentanyl and meperidine are the most appropriate drugs for this situation. Repeated dosages are usually not indicated.

**Pain of Terminal Illness** — No patient should ever wish death because of his physician's reluctance to use adequate amounts of effective narcotic analgesia secondary to terminal illness. The duration of therapy is usually determined by the underlying terminal illness. The drugs used should range from the less potent narcotic analgesics to those that are more potent until the adequate drug is found.

**Post-Operative Pain** — Narcotic analgesia may be required in the post-operative period. In most situations healing from a post-operative procedure is accomplished within

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

- Registered nurses
- Lic. prac. nurses
- Certified nurse aides
- Orderlies
- Home health aides
- Housekeepers
- Companions

**762-8444**

Serving the entire Denver area.

10-14 days and, therefore, therapy with narcotic analgesics are not needed for a longer period of time.

#### **Obstetric Analgesics** — As above

**Headache, Back Pain and Generalized Pain** — In the absence of a specific physical cause for headache, back pain, and generalized pain, one then considers a diagnosis by exclusion of a pain that is caused by emotional disturbances or social problems. The use of narcotic analgesics should be discouraged in these situations and rarely used. When narcotic analgesics are used, they should be used in conjunction with other appropriate forms of therapy to deal with the underlying social or psychiatric problems. In the presence of a specific physical cause for the headache, back pain, or general pain, the specific disease entity should be dealt with by specific medical (non-narcotic) methods and specific surgical methods as indicated. Concomitant use of Schedule II drugs then appears appropriate.

If the medical or surgical methods do not succeed in finding a cure for the pain, then the prolonged use of narcotic analgesia for the "untreatable" physical problem may be considered. The less potent narcotic analgesics should be used initially.

## **Colorado Medical Group Management Association**

*by Sheila Swan, Publications Editor*

"Large medical group practices will have a hard time surviving in the future," according to John Strehlow, President of the Colorado Medical Group Management Association. One of the major difficulties in their survival, according to Mr. Strehlow, is that large medical groups will have to compete more and more with the influx of pre-paid medical plans, which can offer health care services at a discounted rate.

On the other hand, Mr. Strehlow said, "almost all residents (physicians) coming in to practice today want to join a group practice," because of the economic difficulties involved in starting a solo practice.

CMGMA, founded in 1947, is designed to assist the managers of group practices, large and small, in

Colorado. "The primary purpose of this organization is education," Mr. Strehlow noted. CMGMA holds four meetings a year, with educational sessions taking place at each meeting. Three of the meetings are held in the Denver area and the fourth is held at another location in Colorado.

Recent meetings have included programs on topics such as cost containment and marketing. Upcoming educational sessions will include workshops on communications skills and time management. "We try to gear (these programs) from one and two physician practices up to large group practices," he said, stressing that the educational workshops are "germane to all kinds of practices."

Despite a trend for young physicians to want to join group practices, "there are not a lot of large, formally organized medical groups in Colorado," Mr. Strehlow commented. This situation is very unlike the Midwest, where many group practices are established.

"Over 50% of our members belong to a group (medical practice) of less than three physicians," Mr. Strehlow said. Although in order to hold full membership in the organization the clinic manager must work for a medical group which has three or more physicians, members who work for smaller practices may be associate members, with all the privileges of full membership except holding office. Currently CMGMA has approximately 60 members. Physicians as well as lay business professionals are encouraged to join the organization, he added.

Mr. Strehlow commented that more than half the membership of CMGMA are women. Some have professional business management; others, e.g. many office managers of small group practices, do not. "This organization provides almost a mentor group to help the new manager," he said. CMGMA's programs can also help the experienced manager expand his or her knowledge "into broader and more in-depth areas of management techniques."

CMGMA also functions as a support group for its members in which they can exchange information and

assist each other in solving the day-to-day or special problems that arise in the management of a medical practice.

The national organization for medical group managers (Medical Group Management Association) is headquartered in southeast Denver, at 4101 East Louisiana Avenue. While a number of CMGMA members belong to the national organization, membership in MGMA is not required for membership in the state association.

MGMA has a membership of more than 4,000 medical group administrators. It sponsors a number of publications, many educational programs on the national level and has organized a variety of special interest component groups.

MGMA has a large resource library and has established the largest ambulatory health care research foundation in the country, according to Mr. Strehlow. Additionally, administrators can become professionally certified through the American College of Medical Group Administrators, an MGMA affiliate.

One of the major activities of CMGMA is to work together with other organizations having similar aims and objectives, such as the Colorado Medical Society, Mr. Strehlow said. He commented that CMGMA and CMS consult on socioeconomic issues of mutual concern, such as Workmen's Compensation.

Also, CMGMA often receives "input" on current political issues affecting the medical profession from the CMS lobby. He noted that a group of administrators in CMGMA serve as advisors to the COPIC Trust.

For information on how to join CMGMA, contact Trent Spradling, Secretary-Treasurer, at 394-5211. For more information on MGMA, call Beth Isikoff, membership director, at 753-1111.

# president's letter

Merlin G. Otteman, MD,  
President, Colorado Medical Society

## The Medically Indigent in Colorado

In this time of economic recession, one segment of our population which is particularly hard-hit is the medically indigent. This group has income just above the Medicaid limits, yet is severely strapped to pay current bills, let alone unexpected medical bills. The recession and growing unemployment are increasing the numbers in this part of the population. Many such people lost their health insurance coverage when they lost their jobs. They depend at present on savings and any

other financial assets they might have to see them through until they find work.

Efforts have been made in the past and currently are being made to help this segment of the population. In the private sector physicians have long recognized the need for giving discounted or free care to such individuals. The recent effort of the El Paso Medical Society in supporting their community clinic and giving their time in primary care as well as in consultations should be

applauded.

The AMA recently published a list of medical societies across the country that have programs for the medically indigent. Dr. Jim Sammons, Executive Vice President of the AMA, recently testified that 70 percent of all physicians are currently giving free or discounted care of some kind.

The Piton Foundation, a private philanthropic foundation in Colorado, recently initiated a study of the medically indigent in Colorado. They hope to determine the extent of the problem and to suggest some solutions to the Colorado legislature.

---

**"Component medical societies should continue to be concerned about the medically poor."**

---

Each year the state legislature looks at the medically indigent issue. Several bills have been introduced in the current legislative session that deal with this issue. As of this writing, no bill has passed that adequately addresses the needs of the medically indigent.

At what level should this problem be addressed? Recently I took part in the CMS legislative trip to Washington D.C. I attended the U.S. Senate Finance Committee meeting on this very problem. States with high unemployment are requesting emergency short-term funding to help people with health care costs while they are unemployed. No one is interested in starting another entitlement program in these times of marked budget deficits. However, people are looking to the government for help.

It would appear that this need should be met on a state or local level to be most effective. Component medical societies should continue to be concerned about the medically poor. On the part of physicians, discounted care in our offices would appear to be the most efficient method of support of this group of patients. Ultimately the state legislature will need to seriously address this problem and develop some solutions.

Review of the Grievance of the Month in March *Colorado Medicine* is a most disgusting reflection on the grievance process and a nauseating commentary on the practice of medicine as conducted in an unnamed mountain community.

Even though the aggrieved lady withdrew her complaint, there is no way that charges of \$375.00 for 15 minutes of "service" can be justified. The physician in question is no credit to anybody's community. As the report was printed, I must assume that no one on the Grievance Committee had the guts to apprise the physician of his greed and the impropriety of such practice. At this rate, he is a liability, he has contributed greatly to the erosion of public confidence in the profession, and I don't see how his actions can go unchallenged. I know the Grievance Committee doesn't set fees or suggest how medicine should be practiced, but there must be someone in that group capable of recognizing the gross injustice which has befallen this unfortunate lady. The physician should be strongly censored and someone should assure the patient that action has been taken even though she would gain little solace from the Medical Society's inept management at this late date. For those of us who try to uphold high standards of practice, this case only serves to destroy a trust placed in us.

In short, the physician in question is no damn good and he should be so advised.

Disgustingly yours,  
Wallace H. Livingston, MD

April 20-22 was a busy weekend in Washington. Not only did a group from CMS make its yearly pilgrimage, but Representative Wirth hosted his yearly group of constituents from his district, and the American Society of Anesthesiologists held its annual Legislative Conference. I was privileged to attend this latter meeting. Others will report on their trips; however, several of the items addressed at the ASA Conference are of such significance to all practicing medicine that though they may be repetitive, should be reported.

Gladden V. Elliott, MD, a radiologist and Speaker of the House of Delegates of the California Medical Association reported on the history and current status of the California legislation which mandated that hospitals bid for contracts to care for Medicaid patients. It would behoove CMS not only to be sure that all of the officers are aware of this legislation, but all members of the society. This along with the signing of the new Social Security legislation which mandated not only prospective payment of the hospitals by DRGs, but also established a commission to report in 18 months on prospective reimbursement of physicians should put us all on alert.

The ASA also heard from Representative Panatta of the Budget Committee, Donald Young, Deputy Director of the HCFA office, which developed the provider reimbursement regulations for Medicare for those providing their services to the hospital, Arthur Lerner from the FTC and Professor Clark Havighurst of Duke. The latter views essentially all activities of the medical profession as potentially anti-trust, including claiming that the profession limits

the enrollment of medical students, controls credentialing and privileging in hospitals and certifying specialists. He also questions quality review as possibly antitrust when done by physicians!

The conference was taped and the tapes can be requested should there be sufficient interest.

Sincerely,  
Donald W. Stein, MD

**REDUCED AIRFARE TO DURANGO  
FOR CMS ANNUAL MEETING  
OCTOBER 13-15, 1983**

Aspen Airways and Frontier Airlines are offering roundtrip airfare for individuals wishing to fly from Denver to Durango for \$153.

Metro Travel Agency will be coordinating the reservations. For the special airfare, please contact Suzanne Bartels, (303) 759-4936, who will be the coordinator for our group. When calling Suzanne please specify that you will be attending the Colorado Medical Society's Meeting in Tamarron.

For more information on the CMS Annual Meeting, Contact the CMS Meeting Office at 321-8590. Postage-paid advance registration and room reservation cards are available in this issue of *Colorado Medicine*.

**Please make your reservations now.**

## Washington Trip — It Was Beautiful!

Carol Tempest  
*Director, CMS Division of Government Affairs*

April 19 (the day before CMS arrived) went down in Washington, D. C. history as the coldest April 19 recorded. The weather during our stay was beautiful; the rains hit as CMS left on April 23rd and have continued. The magic of our Washington trips goes on. Cherry blossoms have disappeared by late April but everything else is blooming.

With a great group of physicians, and spouses, the trip was destined for success. Again this year, not a

cross word was said by anyone and the group functioned as friends. I knew it was going to be a success when my cab driver to the airport questioned why physicians need a lobbyist "when everyone knows that doctors are perfect and it's the lawyers we really need to get."

We began our four-day trip with an AMA briefing and a beautiful dinner at the Maison Blanche restaurant near the White House. Thursday was the busy day beginning with breakfast at the Capitol Hill Club

with former Colorado Congressman Mike McKeivitt and a later tour of the Capitol with him; a look at the Supreme Court with Justice Byron White; a luncheon with our congressional delegation (minus Senator Gary Hart and Representative Tim Wirth), individual appointments with our congressional delegation or their representatives; a wine and cheese party for the Colorado congressional aides; opera or theatre for many. Friday was "Continuing Medical Education" day in Georgetown with historic tours being offered to anyone not interested in the HHS speakers. Assistant Secretary of Defense, Henry Catto, spoke at noon; and everyone was encouraged to visit Georgetown or do as he wished afterwards. Saturday morning at 8 a.m. found us in the White House with a Metro ride afterwards to the home of Ann Schmidt for breakfast. She is a reporter for the Denver Post.

Twenty-five of us had a wonderful time and learned much about our capital city and how it works. There were physicians present who went on last year's trip and many new faces. I suspect that's what makes each year's trip work. Know that a third annual trip is planned for next year and plan to join us!

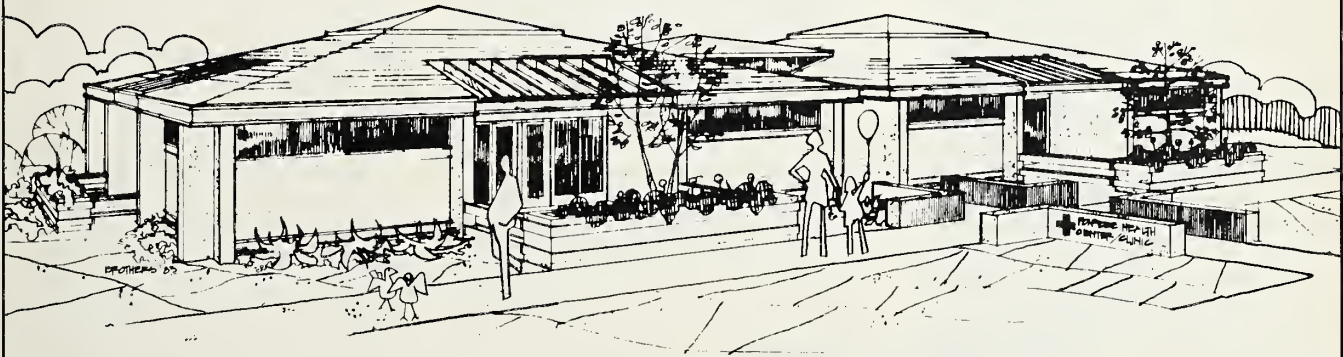

(left) Rep. Pat Schroeder and CMS Legislative Council President Greg Baron, MD, at luncheon for the Colorado Congressional delegation; (right) CMS group as they leave the Capitol after a tour.

**Ask for our Medical Director.**

*John A. Whitesel, MD  
President-elect, Colorado Medical Society*

## **Your Medical Society, Your Medical Staff and You**

Medical societies will never be the same again! Gone are the days of a few people congregating only for social events or brief scientific presentations. Political and economic issues of cost containment, prospective payment for medical services, competition, etc. demand a more dynamic organization than we have known in the past. Scientific and social goals still play an important role in our medical societies, but must share time with these rising new forces.

The hospital medical staff will have to address many of the new problems facing medicine today. These problems involve recent government regulations, the Tax Equity and Fiscal Responsibility Act; Medicare reimbursement for physician services; DRGs — diagnosis related groups — (prospective payment of services to both hospitals and, possibly, physicians); and PROs (the review and data-gathering organizations that will oversee the public and perhaps even the private reimburse-

ment programs). Also, the interaction with business coalitions and their concerns, as well as adjustments and revisions in the insurance industry will affect the medical staffs.

Competition will produce new medical care delivery groups and alterations in relations among physicians on the medical staff. All of these forces will produce a change in the traditional hospital medical staff/hospital administration relationship. How can the hospital medical staff respond to these demands?

The medical societies, both state and component, have the structure and facilities to assist in approaching and solving these problems. State and national legislative efforts are in place. Professional administrative staff stands ready to remodel programs or institute new approaches. Years of interaction with government, business and social groups have produced mutual respect and avenues of action for our profession.

In light of the fact that these approaching problems will strike the practicing physician, the hospital administration and medical staff, a cooperative effort would be beneficial to us all. A medical staff section should be established in the state and component societies so that current situations can be discussed, solutions agreed upon and the resources of the societies directed to assist in these efforts.

The addition of a medical staff section will change the complexion of the state and local societies, but not its purpose, "to promote the science and art of medicine, the betterment of public health and the welfare of the medical profession and the patients it serves."

## **AN INVITATION FROM THE CHAIRMAN**

I would like to take this opportunity to invite you to attend the Scientific Program of the Colorado Medical Society's 1983 Annual Meeting. We have worked hard on the program and are confident that you will receive an interesting and rewarding educational experience. The theme "Brave New World of Medicine — 1984" provides an opportunity for the scientific program to focus on futurism, its challenges and opportunities. I hope to see you on October 14-15 at Tamarron.

**Arnold Greensher, MD, Chairman  
Scientific Program Planning Committee**

Consider this situation: A self-employed physician has personal disability income protection which will pay him \$5,000 a month in long term coverage. A car accident puts him into the hospital, in traction, with severe back pain.

However, the \$5,000 personal disability income check has already been used to pay the physician's personal bills. How do the office expenses get paid?

Personal disability income can not and should not be used to pay office expense to keep the practice going during a period of disability.

The CMS overhead expense program is ideally suited for members of your professional organization. If you suffer total disability because of accident or sickness, this plan will pay up to 100% of your office overhead costs while you remain disabled. "Total disability" means that if because of injury or sickness, you are under the regular and personal care of a physician and that you are completely unable to perform your major professional duties.

One half of covered overhead expenses are reimbursed, for up to three months, if you are only partially disabled and unable to perform some of the key functions of your job. If you share offices, have partners, or are a member of a professional corporation, this program pays your pro-rata share. You may choose benefits starting at \$1,000 with no maximum limit.

"Partial disability" means that, again because of injury or sickness, and you are under a physician's regular and personal care, you are unable to perform your regular professional duties at least half time or unable to perform one or more of your important professional duties.

Who is eligible? CMS members who are in active practice may request coverage. You may continue your policy to age 70 as long as you pay the premiums on time, are employed full time and are responsible for the expenses of maintaining a practice.

Which office overhead expenses are insurable? All fixed, normal and customary expenses for the operation of your practice are insurable, including malpractice premiums, rent, utilities and employee salaries.

The following are some of the highlights for the CMS overhead ex-

pense program:

1. Benefits are payable for actual incurred expenses for up to 24 months for each disability, up to 15 times the contracted covered monthly benefit.
2. Benefits may be increased without evidence of insurability up to \$500 additional coverage per month. Benefits may be increased once every two years until you reach age 49.
3. The policy is non-cancellable and guaranteed to age 65 with no change in premium. You may continue the policy from age 65 to age 70, subject to change in premium rates.
4. After total disability has continued for 90 days, premiums due are waived during the period of your disability. The premiums that were paid during those 90 days will be refunded to you.
5. You are covered for both total and partial disability in your practice for the maximum benefit period of the contract.
6. There is no upward indemnity limit.
7. Premiums are a legal tax deduction.

Certain exclusions and limitations do exist on this policy. Benefits will not be paid for disability due to an act or accident of war or normal pregnancy or childbirth. However, complications of pregnancy or childbirth are covered.

Also, benefits are not payable for a pre-existing condition if you did not disclose it on your application. No benefit will be paid for any loss excluded in the policy by name or specific description.

## Practice Management Tips: The Overhead Expense Policy

by William Blair Smith and Michael J. Probst

### CMS Announces New Membership Insurance Plan

Health  
Hospital  
Practice  
Overhead  
Disability  
Estate Planning  
Return of Dues

This is the second of a series of articles in *Colorado Medicine* detailing the specifics of an entirely new personal and business insurance plan available to CMS members. Messrs. William Smith and Michael Probst are the authorized benefit consultants for the Colorado Medical Society program and, as such, will be providing monthly updates and information on this program.

The program has been a long time in development, and the lengthy research and planning will now produce positive, cost-saving results as another CMS member service. If you wish immediate information concerning elements of this new insurance program, contact the CMS member services office, 321-8590, or write to CMS Office of Member Services, 6825 East Tennessee Ave., Building 2, Suite 500, Denver, Colorado 80224.

# An Introduction to Computers for the Medical Office

by Sherri Bruhn

This article is the first of a series designed to provide you and your staff with a better understanding of computers, guidelines to use in determining if a computer would be beneficial to your practice and practical advice to help you avoid becoming a casualty in the process of computerizing your practice.

Webster defines a computer as "a programmable electronic device that can store, retrieve and process data." Computers automate three of the four steps involved in processing paperwork.

Imagine. Simply by gathering the pertinent information and submitting that data to the computer, the paperwork is completed. The computer will store, process, retrieve and report that data at your command.

What happens when a computer is used for processing paperwork in the medical practice?

The most significant result is improved employee productivity. In the example of patient billing, an entry is made to the computer of the patient account and the day's transactions and the paperwork is completed. All that's required is a request for information.

With the computer processing all steps of the paperwork except the gathering and inputting of data, there is little room left for human error.

Automating procedures will eliminate putting off the time-consuming tasks of compiling reports, such as delinquency reports, practice analysis, etc.

Finally, use of a computer in the medical practice will provide greater control. Up-to-date reports mean timely information for management

and the means to increase cash flow.

Paperwork in the medical practice takes many shapes and forms: patient billing and accounting, correspondence and insurance claims, to name a few.

Take patient billing for example, again. By the time the end of the month rolls around, how many times has the same information been handled?

One, the initial charge slip is written. Two, the data is transferred to the patient's ledger card. Three, the new total is calculated. Four, the entry is made on the daily journal. Five, the day's totals are calculated. Six, an entry is made to the general ledger. Seven, the general ledger accounts are totaled. Eight, the information is presented in the form of a financial statement.

And that's not the end. If the patient has a balance due at the end of the month, a statement must be prepared. That's nine. If your practice accepts assignment on the insurance benefit, an insurance form must be filled out. That's ten. If your patient's account becomes past due, some kind of contact needs to be made reminding him of his responsibility. That's eleven.

How many times is a particular billing transaction handled in your practice? What would that result be if that number were reduced to one?

Practices didn't computerize in the past because the cost was prohibitive. Where a practice used to have to invest well over \$30,000 or \$40,000, complete systems are available today for as little as \$10,000.

A recent article in *Computer Retailing* stated that only 10% of the approximately 225,000 private practice physicians in the United States

are computerized. If prohibitive cost is no longer a factor, why don't more practices use computers?

Physicians have not computerized their practices because the information provided them, by both the computer industry and our educational system, has been inadequate.

## Computer Buzzwords

Are you confused, frustrated or irritated by the buzzwords used by people that work with computers? Do you think a spread sheet calculator is for calculating how long it takes to make a bed? Is it for farmers that do a lot of fertilizing? Don't feel left out. It's rare that you find two computer technicians who can understand each other. Following is some basic information about computers and computer terminology.

A computer system is a collection of components which accomplish a task in an organized manner. Hardware is a term used to describe the mechanical, magnetic and electronic design, structure and devices of a computer; the components you can see and touch.

The processor or central processing unit (CPU) is the computer's brain. It interprets instructions and operates on data. Processors are classified by the set of instructions which they understand. The Z-80 and 68000 are popular processors that understand two different instruction sets.

In order for the CPU to operate on data, it must know what that data is; some method of recording and retrieving data is necessary. Data is coded by the CPU into organized electronic charges, either positive or negative. These charges are then recorded in the computer's "memory." The computer's memory takes two forms, internal and external.

Internal memory contains instructions and data which are directly available to the CPU. The internal memory which contains the data currently being used by the CPU is called RAM (random access memory). Data stored in RAM change according to calculations and instructions from the CPU. The charges which form the data in RAM depend on electricity to survive — when the computer is turned off, this data is lost. External memory

provides a magnetic surface on which any information which is to be saved may be permanently recorded. This function is performed according to instructions from the CPU.

External memory resembles a filing cabinet — data stored there is indirectly available to the CPU. Data stored in external memory must be retrieved and placed into RAM before it may be accessed by the CPU. External memory may be removable or fixed within the computer.

The most common example of a removable storage device is the floppy diskette. A floppy disk is a flexible, record-shaped piece of plastic covered by a protective jacket (intended to keep fingers from contacting the disk). When the floppy disk is inserted into the floppy disk drive, the record rotates, allowing the drive to "read" the data stored on the disk and "write" new data sent from RAM by the CPU. Magnetic tape cartridges are also used for storing data, and operate like the cassette tape and tape player with which you

are familiar. Tape drives are used to write and read the tape.

Fixed storage devices are called hard disks or hard disk drives. The winchester hard disk or "wini" is sealed in an airtight container inside the computer. Winchester hard disks hold many times more data than floppy disks and are more reliable because they are not exposed to dust and handling.

The video screen and keyboard provide a method of communicating with the computer. CRT (cathode ray tube), VDT (video display terminal), tube, terminal and screen are common names for this component.

The CRT's keyboard is organized like a standard typewriter keyboard. Some keyboards also have a numeric keypad similar to a calculator for use in entering numeric data. Data which is "keyed" or typed on the keyboard is transmitted to the CPU. As this information is typed it is "echoed" on the screen so mistakes may be seen and corrected.

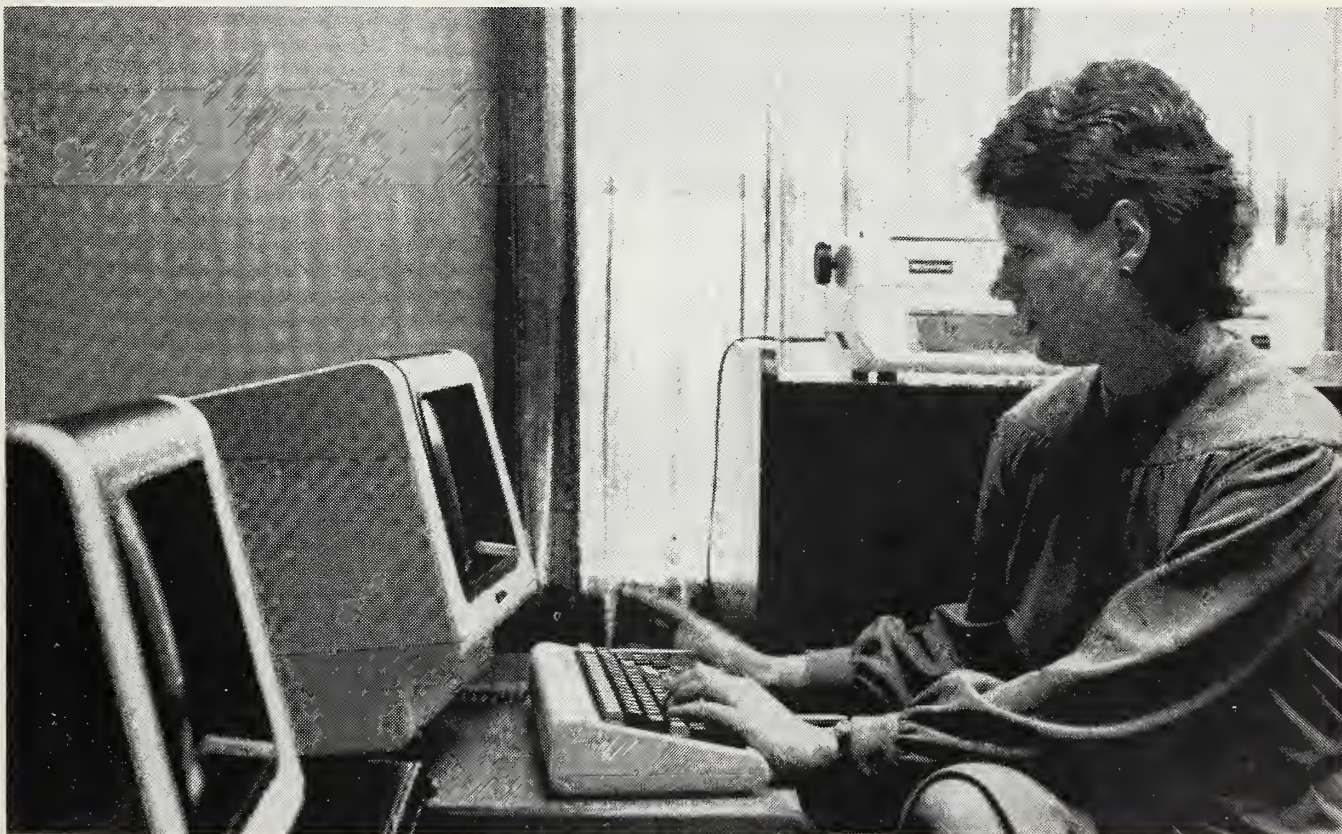

When the CPU sends messages to the operator, they appear on the

screen. Such a message may display data previously entered, the results of a calculation, or a request for information from the operator. The latter is called a prompt. The screen may also display a menu. A menu is a list of options from which the operator may select. "Menu-driven" systems allow operators to enter data and request information with very little knowledge of how computers operate.

Printers are used to obtain a "hard copy" or printout of the processed data and are described according to the method they use to form characters on paper.

Printers that print a matrix of dots to form a character are called dot matrix printers. The printouts which come from these printers look like what you would expect from a computer. However, some dot matrix printers print the matrix so tightly that it is difficult to tell that the character is a matrix.

Dot matrix printers have speeds ranging from 100 c.p.s. (characters per second) to several hundred l.p.m. (lines per minute). That's a

**Sherri Bruhn is a medical office management consultant. Her experience with computer systems includes installing systems as end-users, software evaluation, system support and training.**

**Ms. Bruhn will be conducting a seminar entitled "Basic Computer Knowledge for Medical Personnel" for the American Association of Medical Assistants on July 23, 1983. For further information, contact Judy McCarty at 232-5745 or 420-1344.**

range of roughly 1,000 to 10,000 words per minute! Many of these printers have the ability to print a wide variety of print styles, including boldface, italics, etc.

Letter quality printers strike an impression of a fully-formed character onto the paper in the same way a typewriter does. These printers are generally more expensive than the dot matrix printers in the 100-300 c.p.m. range, and have speeds of approximately 15 to 70 c.p.s. (150-700 words per minute).

Letter quality printers will print a variety of typestyles. This is ac-

complished by changing the print-wheel (like changing a typewriter ball). These printers also have the ability to vary the position of characters, both horizontally and vertically. Horizontal control provides proportional spacing; the "whitespace" between words is divided between the letters of words for right-justified printing. Vertical control provides the ability to print subscripts and superscripts.

Computers are sophisticated machines, to be sure, but they're useless without explicit instructions telling them what to do. For those of

you who are somewhat uncomfortable with the so-called intelligence of computers, I'd like to emphasize that point.

Instructions which tell the computer what to do, when placed in a logical order, form a computer program. Software is the term used to describe programs and data, those parts of the system which are electronically or magnetically recorded and cannot be seen or touched.

Computers require two different kinds of programs, operating system programs and application programs.

Operating system (O/S) programs instruct the CPU about how the system operates; matters such as "talking" to the CRT and printer, or retrieving data from the disks. Operating systems are "written" according to the set of instructions understood by a particular CPU. The O/S that is compatible with one computer is not necessarily compatible with another.

Application programs tell the computer how to do something useful, such as print a patient's statement or insurance form. Application programs are written to "run" on a computer using a specific operating system or one of many compatible operating systems.

In summary, "hardware" describes the components of the computer which you can see and touch. "Software" describes the instructions that program the computer to do something useful.

The basic hardware of a computer system includes the CPU, memory (both internal and external), CRT and printer.

Two types of software are necessary, the operating system and the application programs. Of all the components that form a computer, the most important is the application software. Find software to do the jobs you have in mind. Once you're decided on the software, select hardware designed to run the applications you've selected. There's nothing worse than investing in the hardware and then finding out there is no software to make the computer do what you want it to do.

The next article will discuss how to decide whether your practice would benefit from a computer, along with guidelines to use in deciding what the computer can be expected to do in your practice.

First Interstate Bank  
of Denver's Health  
Care Professionals'

Banking Program specializes in personalized, comprehensive service for those in the field who practice or are in administration. We realize that in banking, like medicine, there's a world of difference between a simple answer and a simplistic one. You need more than a pat response to your banking questions. First Interstate has the people and the resources to provide you with a complete array of financial services, including innovative trust plans, facilities financing and investment programs. And, we offer all these services with personal attention and meetings scheduled for your convenience—at your office or ours.

You'll work directly  
with a professional  
banker who is able to

help you develop a customized financial plan for you or your employees. Our integrated team approach means you'll receive efficient, accurate responses to your questions. In addition, because we're part of a twelve western state banking network, you'll enjoy personal attention and have the resources of First Interstate Bancorp, the eighth largest banking system in the nation, behind you.

To find out how you can benefit from First Interstate's Health Care Professionals' program, contact Shirley Good, Vice President, Health Care Banking Department at 572-1776.

# The Name of the Game:

*A Discussion About Long Term Care  
with Kenneth A. Kahn, MD*

---

**Dr. Kahn is the Associate Medical Director for Acute and Long Review Programs at the Colorado Foundation for Medical Care. He is an internist from Boulder. Dr. Kahn has been active in numerous organizations and served as President of the Colorado Medical Society and CFMC in 1973-74. He has presented papers on long term care issues at several national meetings.**

---

## What do we mean by long term care?

Long term care is basically the care of the aged and disabled; though it is commonly perceived as basically care for the aged, it goes far beyond that into areas of care such as mental illness, disabilities of the young adult and the developmentally disabled and mentally retarded youngsters of the community. We're basically talking of a population that frequently requires institutionalization in some sort of setting.

(For this interview the subsequent responses will be concerned primarily with long term care of the aged.)

Issues of long term care can and do arise in a physician's everyday practice. What we're basically talking about is an elderly, disabled population. We're talking about people who carry multiple diagnoses who aren't going to get dramatic results and cures. Geriatric care doesn't start in the nursing home. It starts in the office. Of course it involves every primary care physician, but it also includes those physicians who practice surgery, gynecology, orthopedics and just about anything else.

So the "average" private practitioner must learn to recognize variations in the physiology brought on

by aging. The effects of drugs and of institutionalization on the overall health of his aged patients frequently is different than the effects on his younger patients. He must be prudent in prescribing, in transferring patients to institutional care, in patient followup.

Good geriatric consultation is not readily available. On the positive side, although there is more physician interest in long term care than there used to be, there are not nearly enough physicians specializing in long term care or geriatric practice. For example, Dr. Robert Kane of the Rand Corporation estimates that there will be a need for some 7,000 to 10,000 additional strictly geriatric practitioners in this country by 1990. There is no way under the present system that these numbers of people are going to be found or trained. It's going to be necessary for those who practice medicine everyday to learn how to better handle the clinical problems of the aged.

As a clinician, when the physician considers the illnesses of his geriatric patients, it is necessary to approach them with a different mindset than one would in the classic diagnostic manner. When you're dealing with geriatric issues in particular, you're not dealing solely with a case of this diagnosis or that, you're dealing with a variety of illnesses, symptoms, social factors, environmental issues, etc. For example, the biggest problems that drive people into nursing

homes include confusion, immobility, difficulty in communicating, incontinence; in short, those problems that imperil daily self care. Iatrogenic disease is a major issue. By that I mean those unfortunate situations that we as physicians, in our zealotness to treat and cure, sometimes make worse. For example, institutionalization itself can be created or prolonged as the result of the free use of sedatives, tranquilizers and technological testing or procedures.

Another tragedy is Alzheimer's Disease. Perhaps 20 to 25 percent of people who are diagnosed as having this disease don't have it and in fact have something that is treatable. If the physician doublechecks and looks for some different kinds of things that might confuse his patient, especially by looking at the drugs he is giving, recent social changes in the patient's life, the patient's sensory status, and checking to see if the patient is depressed, in addition to looking at the common clinical entities, the result may be a diagnosis that does not require the patient to be institutionalized. Both the quality and cost of care could be dramatically impacted by a closer look in this area.

Perhaps one other thing should be mentioned and that is the enigma that is called quality of care. I classify quality of care as an enigma because in this day and age we are required to think more and more of social consequences, the so-called "quality of life" issues. This becomes difficult when you're trying to practice good quality medicine and you're trying to be a humanist at the same time. Sometimes the two don't mix.

Sometimes a patient receives a technological result (from treatment) which he completely misunderstands. The fundamental doctor/patient relationship may be threatened and further care is jeopardized. I heard at a meeting recently that quality of care can be broken down into two components, the technological component and the humanistic component. Physicians may evaluate the technological component and say that the quality of care is good. Patients, or others who are concerned with the humanistic side of things may evaluate the same care and grade it as bad. There is an interface between humanism and tech-

nology in quality of care that must be understood. As individual physicians we need to discuss the issues realistically and compassionately with the patient and family. Only then can we expect congruence of these issues.

### **How will prospective payment affect long term care facilities and patients?**

Immediately I think that one can anticipate that hospitals will try to discharge patients with more alacrity or try to transfer patients to facilities with lower levels of care, such as nursing homes. I suspect that this transfer will result in a good deal of chaos. Nursing homes may well refuse many of these cases as being too complicated to take care of. Nursing homes may say that they are taking care of as many "heavy case" patients as they can and will refuse additional admissions. It would seem prudent for the people who are implementing the DRG (Diagnosis Related Groups) concept to also include extended care in their thinking.

### **Will the DRG system result in cost-shifting in the nursing homes?**

That's the name of the game. Cost-shifting has been basic to the LTC system since its inception; the DRG system will merely accentuate the problem. Private patients already assume more of the per patient costs in nursing homes today. In Colorado, it is my understanding that about 80% of nursing home patients are Medicaid recipients. They enter the nursing home as Medicaid clients or they exhaust their private financial resources, become eligible for Medicaid, and eventually turn to the public system for assistance.

The private pay rate runs more than double that of Medicaid. So indeed this is an example of cost shifting. Without going into detail, you should also consider that national policy has shifted needs for basic housing onto the nursing home. This was done (we think ill-advisedly) to save costs and probably has contributed to the cost problem.\*

\*For further information on the new prospective payment program, please turn to p. 140 in this issue.

### **What has been your experience in dealing with government regulatory agencies on long term care issues?**

Like chasing windmills. I can honestly say that after 10 years of being involved in chasing the regulations, we may have thwarted some; however, obtaining change in the regulations is a very difficult process. The regulations that emerge from state agencies that the state does not have to put through the federal hierarchy can be and are sensibly influenced. They are influenced quietly through the review programs and through the good honest efforts of numerous individuals and organizations. When you start dealing with the "feds," the situation becomes more difficult.

For example, we have pushed the issue of required physician visits to nursing home patients through the federal arena to the point of getting a waiver of the requirement, but then have not had the resources to implement it. We are pursuing the issue again, taking the position that requiring a physician to make a visit to a nursing home patient every month for skilled care or every two months for intermediate care does not really address patient needs.

We deplore abandonment, we are not suggesting abandonment, but we are trying to evolve a system in which the physician makes the visit on the basis of need, makes his orders, does his follow-up on the basis of his assessment and is accountable to his own plan, subject to peer surveillance. The nursing home administration or the physician should not be called on the carpet for not adhering to rigid regulatory schedules.

### **How has the Colorado Foundation for Medical Care been involved in the area of long term care?**

The Foundation became involved in long term care in 1973. Over the past 10 years, it has been involved in many geriatric issues. We've been involved in "keeping the gate," i.e. helping control admissions to the nursing homes. We have tried to divert patients from nursing homes who don't require institutionalization and have built a successful system of utilization review.

The Foundation's efforts include the promotion of good geriatric

education; support of such programs in the medical school; support of medical societies that are trying to develop good geriatric practice; and the promotion of concepts of multidisciplinary practice utilizing paraprofessional providers. The Foundation has promoted regulatory reform in areas where regulations are oppressive and considered a detriment to good practice.

CFMC has also played a role in developing some of the home health care programs that are emerging. That is not to say that we blindly advocate home health care as a solution to the cost problem. Indeed, if home health care mechanisms are promoted without some reasonable system of controls, it may well prove to be another exercise in escalating costs without necessarily promoting quality of care.

### **What role should the medical society play in the promotion of quality long term care?**

As an individual I do not accept the concept of *the medical society*. If, however, "the medical society" includes all the component and specialty societies, I would answer that of course they have a vital role to play. Medical societies have, in particular, the role of setting up the moral, ethical and practical concepts that are involved in delivering good care.

Also, medical societies have the responsibility to seek fair reimbursement for their physicians and compliance by their member physicians with rules and regulations. As an example of constructive component society involvement, the Denver Medical Society has an excellent committee which is addressing many of the important issues of long term care.

The Colorado Foundation for Medical Care has developed an expert staff and has numerous practitioners working to further the cause. But I don't think medical societies should look to the Foundation to carry all the responsibility in this area. The Foundation, with its expertise and position, is and should be a catalyst for new ideas and programs as well as conducting the programs for which it has responsibility. It stands ready to assist any medical or non-medical group that shares common goals.

We interrupt this page for a

# Special Bulletin

You may expect to receive the  
**prospectus** for the Land and  
Building Partnerships in the latter  
part of **June**. These two offerings  
will provide an excellent  
investment for you personally as  
well as for your business and/or  
pension fund. Please stay tuned to  
the next issue of *Colorado  
Medicine* for further details!

**FOR INFORMATION PURPOSES ONLY**

**SUMMARY OF OFFERING**

**\$2,600,000 maximum July 1, 1983**

**COLORADO MEDICAL LAND PARTNERSHIP, LTD.**

5,200 Units of Limited Partnership Interests — \$500 Per Unit  
Minimum Investment: Five Units (\$2,500); or  
Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

Acquire 10.0 acres of land from the Colorado Medical Society ("CMS"), sell approximately 5.0 acres ("East Tract") for a substantial return of funds to investors and to lease the remaining 5.0 acres ("West Tract") to the Colorado Medical Building Partnership, Ltd. with the sale of the West Tract to CMS to occur within 5-10 years.

**FINANCING:**

- 1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Land Partnership.
- 2) Units of Interest to be sold: Up to 5,200 Units for maximum gross proceeds of \$2,600,000.

**INVESTMENT OBJECTIVES:**

The Land Partnership's objectives are primarily designed for pension and profit sharing programs and include: (i) to share the appreciation of the equity of the East and West Tracts, which appreciation will be realized upon the sale of such Tracts; (ii) to provide the Limited Partners with cash distributions generated through lease payments commencing approximately August 1, 1983; (iii) to provide the Limited Partners with a substantial return of funds upon the sale of the East Tract for a minimum of \$1,400,000 guaranteed by CMS; any cash in excess of \$1,400,000 will be allocated 75% to the Limited Partners and 25% to the General Partners; (iv) to obtain long-term appreciation in the West Tract of not less than \$1,500,000, guaranteed by CMS, with the sale to occur within 5-10 years; and (v) to provide Limited Partners with an increased projected after tax annual return upon the sale of the East Tract.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

**FOR INFORMATION PURPOSES ONLY**

**SUMMARY OF OFFERING**

**\$3,800,000 maximum July 1, 1983**

**COLORADO MEDICAL BUILDING PARTNERSHIP, LTD.**

7,600 Units of Limited Partnership Interests — \$500 Per Unit  
Minimum Investment: Five Units (\$2,500); or  
Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

To lease approximately 5.0 acres of land from the Colorado Medical Land Partnership, Ltd. and construct a commercial office building thereon of five stories to become the headquarters and conference center for the Colorado Medical Society ("CMS") and its affiliated entities and to lease the remaining office space to third parties.

**FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Partnership.

2) Units of interest to be sold: Up to 7,600 Units for maximum gross proceeds of \$3,800,000. In addition to using gross proceeds from the sale of Units, the Partnership will obtain additional funds in the form of a mortgage in the amount of approximately \$6,000,000 to finance the proposed building.

**INVESTMENT OBJECTIVES:**

The Partnership's objectives are primarily designed for individual investors and include: (i) to obtain long term appreciation in the value of the building; (ii) to pay 99% of the tax benefits to the Limited Partners; and (iii) to provide Limited Partners with a projected after tax 3 for 1 return of their net investment within 8 years through a mandatory buy-out of this Partnership by CMS.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

## COLORADO MEDICAL SOCIETY

### EXPRESSION OF INTEREST

Based on the summary descriptions of the proposed Limited Partnerships, the EXPRESSION OF INTEREST can be shown, as follows:

A. Land Units of the proposed Colorado Medical Land Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,000] for an Individual Retirement Account) to be sold at \$500 per Unit.

B. Building Units of the proposed Colorado Medical Building Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,000] for an Individual Retirement Account) to be sold at \$500 per Unit.

Units in either the Land or the Building Partnerships, Ltd., can be purchased through 1) Individual Ownership, 2) Trustee (Trust, Pension Plan, Keogh, IRA), 3) Corporation, 4) Custodian or through 5) Rollover of Existing Colorado Medical Society Bond Proceeds.

If you wish to make an EXPRESSION OF INTEREST, please complete the following and return to the Colorado Medical Society, 6825 E. Tennessee Avenue, Building 2, Suite 500, Denver, CO 80224:

These proposed Units would be registered as follows:

Name \_\_\_\_\_

**THIS EXPRESSION OF INTEREST DOES NOT CONSTITUTE AN OFFER TO BUY ANY SECURITY IN ANY JURISDICTION. THIS EXPRESSION OF INTEREST HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY.**

# DOCS

DOCTORS OFFICE COMPUTER SYSTEMS

## DOCS WORKS FOR YOU, YOUR STAFF, YOUR PATIENTS.

DOCS is a computer system that has been designed to meet the needs of Medical and Dental professionals. Installing a computer programmed with DOCS means that your practice runs more economically. Fewer mistakes are made. You and your staff waste less time on tedious paper work. The result? Increased return on receivables, improved practice information, fewer delinquent accounts. And that's just the beginning.

Because the computer takes care of menial paper work, your staff has time for more important duties, and you have more time for your patients. DOCS is simple for your staff to use. The computer asks a question; your office person enters the answer. DOCS will question invalid numbers, process insurance forms, and prepare billing, just to mention a few functions. Your patients benefit, too. Patients are registered more quickly, their records are immediately available without searching for files, and accounts are kept up-to-date. DOCS does all this and much more.

# obituaries

---

**Donald G. Allely, MD**, of the Weld County Medical Society, died in Greeley March 11. He was born on March 30, 1932, in McCook, Nebraska. He graduated in 1954 from Nebraska Wesleyan and in 1957 from the University of Nebraska Medical School. He moved in 1958 to Greeley, where he joined the staff of the Greeley Hospital.

Dr. Allely was an associate clinical professor at the University of Colorado School of Medicine. In addition, he was physician for athletic teams at Greeley High School.

He was a charter member of the American Academy of Family Practice. He served as president of the Colorado Chapter in 1967-78.

Surviving are his wife, Joyce Allely, three daughters, Kimberly Scott Allely of Anchorage, Alaska; Rebecca Jane Allely and Magdalene Marie Allely of Greeley; three sons, Eric B. Allely of Denver, Craig M.J. Allely of Colorado Springs and Zachary G. Allely of Greeley; his parents, Dr. and Mrs. George Allely of Nebraska and a brother and sister.

**William Gordon Fowler, MD**, of the Boulder Medical Society, died April 2 of cancer at his home in Longmont. Dr. Fowler was born on a ranch near Eads on May 28, 1916. He moved with his mother and two brothers to Denver and attended schools in the Denver area. He won a four year scholarship to the University of Colorado and graduated in 1938 with a bachelor's degree in pre-med. He received his medical degree from the University of Colorado School of Medicine in 1943.

In 1944 Dr. Fowler entered the United States Army as a first lieutenant and medical officer, serving in the southwest and western Pacific. In 1947, he entered medical practice as a family physician. He had continued as a member of the Colorado Air National Guard and in 1950 was called back into the service for the Korean War. He served as commanding officer of the Clovis Air Force Base Hospital in New Mexico. He left the service as a lieutenant colonel in 1952.

After his discharge, Dr. Fowler went through specialty training in surgery for four years at the Veterans' Administration Hospital in

Denver. In 1957 he opened an independent general surgery practice in Longmont. He joined the staff of the Longmont Clinic in 1962, where he practiced for 20 years until his retirement in June, 1982.

He was a Fellow of the American College of Surgeons. Dr. Fowler served as president of the Longmont Clinic, the Longmont United Hospital Staff and the Colorado Chapter of the American College of Surgeons during his medical career.

Dr. Fowler was married in 1972 to Geraldine ("Jerri") Greer of Limon. Survivors include his wife; his mother, Ethel Moore of Wheatridge; a daughter, Susan, of Houston, Texas; three sons, Greg, of Limon, Steve, of Arvada, and Bill, of Colorado Springs; six grandchildren; and a brother, two nephews and a niece.

**Leroy L. Kenney, MD**, of the Denver Medical Society, died March 9 at Porter Memorial Hospital in Denver. He was born in Creston, Iowa, on February 3, 1899. He served with the National Guard in France during World War I. Dr. Kenney was a graduate of the University of Missouri and the University of Pennsylvania Medical School.

He worked for the U.S. Veterans' Administration until World War II. After duty in the South Pacific, he remained in the navy until 1959, when he retired with the rank of captain.

Dr. Kenney, a resident of Denver for 24 years, was a staff physician at Porter Memorial Hospital and Swedish Medical Center. He was a clinical instructor at the University of Colorado Medical School.

He was honored by DMS in 1975 for 50 years of medical practice. Dr. Kenney was a member of the American Medical Association and the American Board of Otolaryngology. He was elected a fellow of the American Academy of Ophthalmology and Otolaryngology in 1953.

Dr. Kenney married Phidilue Mae Strong in 1927 in St. Joseph, Missouri. Mrs. Kenney died in 1978.

He is survived by a son, Leroy S. Kenney of Westlake, Ohio; a daughter, Phidilue N. Huss of Littleton, seven grandchildren and six great-grandchildren.

## Rehabilitation Groups of the American Cancer Society

### Reach to Recovery

Reach to Recovery is a rehabilitation group for women who have had breast surgery. It is designed to help them meet their physical, psychological, and cosmetic needs. Volunteers, who have been selected by their doctors and have completed training, visit the patients in the hospital with the physician's approval. No medical advice is given but compassion and emotional support are available.

## Medical Assistants Programs

Looking for a medical office assistant or transcriptionist? Several public schools and colleges in the Denver area train medical office personnel.

The Aurora Public Schools Technical Center offers a nine-month certificate program in medical transcription, including classes in word processing, medical terminology and transcription techniques.

Emily Griffith Opportunity School in Denver has a nine-month medical assistant certificate program. Students study microbiology, physiology and first aid in addition to taking business classes such as insurance, recordkeeping, typing, billing, etc.

Students also gain work experience through an externship in the latter months of the program by working in physicians' offices and clinics. After completing the program and one year's work experience, students are eligible to take the certification exam offered by the AMA and the American Association

of Medical Assistants.

Arapahoe Community College offers a two-year Medical Office Assisting Program. Students in this program obtain an Associate Degree in Applied Science.

The course of study includes basic science classes, such as anatomy and physiology; first aid and CPR; diagnostic lab procedures and classes in office and management skills.

After completing the curriculum, students are placed in physicians' offices or clinics for a supervised practicum experience.

The program is accredited by the American Association of Medical Assistants and the Committee on Allied Health Education and Accreditation of the AMA.

These programs offer job placement assistance to their students. If you are looking for medical office staff and would like more information about these programs, contact the following persons:

*Aurora Public Schools Technical Center:* LeAnna Skogen, Health Occupations Supervisor - 344-4910,

ext. 260.

## CMS Breaks Ground for New Building

The Colorado Medical Society

### Grievance of the Month

The Grievance Committee received a complaint from a concerned citizen who stated that he had listened to a talk show which regularly featured an MD and a chiropractor on the same panel. Poor medical advice was suggested by the chiropractor, and the MD did not repudiate this misleading advice.

After thorough study of the case, it was found the MD, although an intelligent and well trained physician, did not refute the vitamin cure for a serious medical symptom simply because there was no further time allocated for his input on that particular program.

The radio station was contacted regarding this problem. The station did not want to change their programming because of this misinformation. However, they stated that in the future they would ensure that the text of the program would be related to health and not problems of disease.

The physician involved in the program was informed of this complaint. In addition, the Grievance Committee questioned the wisdom of his association with a chiropractor on the program, and requested that he carefully examine the appropriateness of his participation in the broadcasts.

## Partner Wanted For Luxury Duplex Overlooking Lake Dillon

This is the one. No money is necessary to join with silent partner in ownership of this existing spectacular duplex. Silent partner is developer-owner and will cover the down payment. You will receive all of the year round personal use of this four bedroom unit with four baths, jacuzzi room, wine cellar, two fireplaces and two wet bars. You will receive all of the tax benefits of this property located in the heart of Summit County, minutes from six major ski areas. You will be responsible only for qualifying for a new mortgage and making any monthly payments. This partnership program is offered in this medical publication in response to the developer-owner's need to join with established, responsible partners. With two master bedroom suites, this is a serious offer for one or more partners. Ask to come up just to see the incredible views of Lake Dillon, the Marina, Mt. Guyot, Mt. Baldy, The Ten Mile Range, Buffalo Mountain and the Gore Range.

**Call today for more information** about this unique offer. Other properties to be available with same partnership program.

**So DON'T go out on a limb,**

leadership broke ground Tuesday, June 7, for construction of the Colorado Associations Building at Mineral Road and South Broadway in Littleton.

More than a hundred people, including CMS officers, staff, Littleton city officials and representatives from local businesses, gathered for the groundbreaking ceremony and reception.

According to CMS President Merlin G. Otteman, it was the "realization of a long-time need for a permanent headquarters for Colorado Medical Society and its members throughout the state."

During the past 20 years, CMS has had four locations; the old Republic building at 16th St. and Tremont, East 18th Avenue and Williams, East 19th Avenue and Franklin and its present location, East Tennessee Avenue and Niagara.

CMS, the Colorado Foundation for Medical Care, the COPIC Trust and Medical Liability Consultants Program, Inc., will be located in the building.

The five-story, 87,000 square foot

building will have a conference center as well as other meeting facilities and will have lease space available to other associations and organizations.

## Gerald M. English Appointed to National Board of Governors

Gerald M. English, MD, Secretary of the Colorado Otolaryngology Maxillo Facial Society, was recently named the Colorado delegate to the Board of Governors of the American Academy of Otolaryngology-Head and Neck Surgery, Inc. Physicians or other persons who have questions with regard to activities or programs of the Academy should contact Dr. English through his office at 789-6377.

Medical Society provided personal and written testimony before the Colorado Industrial Commission supporting the need for increasing the reimbursement conversion factors under the Workmen's Compensation program. The Industrial Com-

mission's rulings were published in the June 10, 1983 issue of the *Colorado Register*, providing for increases in several areas. A comparison of the old and new reimbursement schedule is provided below:

	Old Rate	New Rate (eff. 7/83)	% Increase
Medicine	\$ 4.60	\$ 4.75	3%
Surgery	44.60	48.00	8%
Anesthesia	12.75	17.00	33%
Radiology	10.90	11.00	1%
Pathology	11.55	11.55	0%

**Total Average Increase: 20%**

### CMS Receives Accreditation from ACCME

The Colorado Medical Society has received accreditation from the Accreditation Council for Continuing Medical Education (ACCME). Initial accreditation is for a two-year provisional period. CMS can now provide accredited, continuing medical education (CME) in our own right, as well as continuing our successful efforts throughout Colorado. We are pleased by this new opportunity to serve our membership better through CME.

### REDUCED AIRFARE TO DURANGO FOR CMS ANNUAL MEETING OCTOBER 13-15, 1983

Aspen Airways and Frontier Airlines are offering roundtrip airfare for individuals wishing to fly from Denver to Durango for \$153.

Metro Travel Agency will be coordinating the reservations. For the special airfare, please contact Suzanne Bartels, (303) 759-4936, who will be the coordinator for our group. When calling Suzanne please specify that you will be attending the Colorado Medical Society's Meeting in Tamaron.

For more information on the CMS Annual Meeting, Contact the CMS Meeting Office at 321-8590. Postage-paid advance registration and room reservation cards are available in this issue of *Colorado Medicine*.

**Please make your reservations now.**

The dirt flies as the first shovelfuls are lifted at the CMS groundbreaking ceremonies. From left to right are: Chris Stein, CMS Executive Director of Finance and Operations; John Whitesel, MD, CMS President-elect; Frederick Lewis, Jr, MD, President, Colorado Foundation for Medical Care; Joseph Poynter, MD, CMS Building Committee Chairman; Bunkie Inkret, CMS Auxiliary President-elect; Merlin Otteman, MD, CMS President; Charles Emley, President Pro Tem, Littleton City Council; R.G. Bowman, CMS Executive Vice President; Jack Lawlor, SLP (CMS building architects); Jeff Porter and Roy Bitlingmeier, Turner Construction (construction management firm for the building project).

## The Colorado Medical Society Building: A Reality

At the June 4th meeting of the CMS Board held in Breckinridge after the President's Planning Session, the board voted to proceed with the construction of the CMS building south of Denver. This decision was made after much discussion, including a building workshop for the board and component presidents held on the preceding day. Much interest in the building program was apparent, including

## The differences expressed seem to be mainly in philosophy.

concern by several members, in particular the Denver Medical Society, about the size of the project. The board's decision to proceed was based mainly on a desire to develop a non-dues equity for CMS and to establish a permanent home for CMS, CFMC and COPIC.

The differences expressed appear to be mainly in philosophy regarding CMS activities. **Should the Colorado Medical Society be in the real estate business?** Some physicians feel that the society should stick to servicing its members; others, including most of the CMS board, feel that the building and its eventual rental income will increase what CMS can do for its members.

We might look to the American Medical Association as an example. Nine years ago AMA was financially broke, borrowing money monthly to pay its employees. Aggressive leadership took over with investments in downtown Chicago real estate. Today AMA has assets of more than \$80 million. This has allowed AMA to go into new programs for its membership. Their recent program for medical education via computer which has been made

Merlin G. Otteman, MD  
President, Colorado Medical Society

available to physicians' offices is one example. This financial independence has also allowed AMA to pursue through the courts the many intrusions into our practices by outside forces, mainly governmental.

Part of the financing of the CMS building will be through the sale of limited partnerships to the physicians of Colorado. Within the next three months, all members of CMS will be receiving the two prospectus on these offerings. The offerings are in \$500 increments, so they will be available to as many members as possible. I hope all of you will sup-

port these offerings, which will give further financial stability to the project.

So the decision to build has been made and the Colorado Medical Society is to have a new home. As we embark on this project, I feel it is a time for all members of CMS to rally to the cause and support the project. It is to be hoped that differences over the building can be put aside and the building can become a cornerstone for organized medicine in Colorado which will allow organized medicine to become more effective in its professional endeavors.

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

- Registered nurses
- Lic. prac. nurses
- Certified nurse aides
- Orderlies
- Home health aides
- Housekeepers
- Companions
- Live-in personnel
- Hosp. private duty

## Crisis or Tech Boom?

by Tom Bruns, MD  
reprinted from the  
**Larimer County Honker**,  
Vol. 1, No. 2

A few weeks ago, Dr. Merlin Otteman and I had the opportunity to hear Governor Richard Lamm speak with regard to the so-called "health care crisis." Governor Lamm spoke from the viewpoint of one who pays the bills. He revealed that the state is \$50,000,000 in debt; that the cost of health care expenditures

is skyrocketing; and that total GNP and revenues are shrinking while the elderly population, in general, is increasing. He also spoke briefly (and to the point), about medical technology increasing logarithmically, thereby increasing the cost of health care delivery, and that some constraints must be placed on these expenditures.

He felt that it is time for a "Copernican Theory:" a radical revision of our thinking about the health care industry. He implied that perhaps "Cadillac" quality of health care may not be an inalienable right of

every individual; that, perhaps, two tiers of health care are reasonable. In this regard, I feel that he is absolutely correct. However, in response to his direct mandate for rather radical abstract Copernican thinking (and you will remember Copernicus was the astronomer who revolutionized the idea of the solar system), I asked the question whether expenditures for health care and growth of industry are really bad? Perhaps this enormous growth is really a spin-off of the technology boom and patient demand for increasing technical quality. Why not look at the health care industry's growth as a positive development as in any burgeoning, high tech, private industry?

## Perhaps two tiers of health care are reasonable.

Note that all the industries who have kept up with the technology boom are currently very prosperous growth industries, whereas, those industries which have not kept up with high tech, e.g. the Detroit auto industry, are falling drastically behind in the marketplace. If the government was not footing the bill, would this (health care) industry come under such scrutiny, or would the government merely look at it as a boom in the marketplace?

I submit to you that if this is a healthy industry, there is a logical way to test consumers' demands for high-quality, high-technology medicine for those who can, and those who cannot pay. Let the private consumers pay larger first dollar coverage, and consumers will determine whether they want "Cadillac-quality" medicine. If, indeed, consumers are as concerned about the quality of health care as I believe they are, the industry will continue to prosper and grow, and improve with technical innovation.

Governor Lamm is developing a Blue Ribbon Task Force to study these issues. Let's hope Copernicus really does sit thoughtfully with this task force and let us, as physicians, concern ourselves with a genuine attempt to keep our fee increases restrained to the rate of inflation.

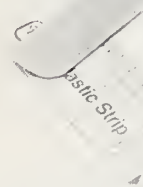

## Emergency! First Aid

**Condition:** Notable increase in litigation regarding inmate conditions and treatment in county, city, state and federal penal institutions.

**Symptoms:** Incidence of inmate complaints concerning health care and medical treatment while incarcerated in jails, reformatories and penitentiaries.

**First Aid Remedy:** Contact CMS Jail Health Care Standards Coordinator and find out what CMS has done to evaluate jail health care standards, providing training for staff and administrator in recognizing health problems and medical emergencies common to institutional inmates.

For detailed information and a personal consultation, complete the following form and mail immediately to CMS, 6825 East Tennessee, Bldg. 2, Suite 500, Denver, Colorado 80224.

John A. Whitesel, MD  
President-elect, Colorado Medical Society

## The Colorado Foundation for Medical Care: A Major Influence on Your Future

On March 24, 1983, Congress passed H.R. 1900 (the Social Security amendments of 1983) which includes prospective reimbursements to hospitals for Medicare inpatient services by diagnosis related groups (DRGs). The President has signed this bill into law. Payment by prospective rates becomes effective October 1, 1983. Hospitals will be required to contract with a peer review organization (PRO) serving its region or state to review:

1. The **validity of diagnostic information** provided by the hospital for purposes of payment.
2. The **completeness and adequacy of care**
3. The **appropriateness of admissions**
4. the **appropriateness of care provided to outlier cases** (outlier refers to discharges that exceed the mean length of stay for that DRG).

The determination of the validity of diagnostic information will result in the review of hospital charts for data and diagnosis. The accurate collection of data and correct diagnosis will be critical to the hospitals' financial health. Completeness and adequacy of care will require interpretation, judgment and sensitivity to medical standards in the community. Appropriateness of admission will demand understanding of the illness, its severity and proper management. Evaluation of care provided outliers will involve the patient and physician who vary from the norm and will necessitate

mature, knowledgeable peer review.

Hospitals must contract with PROs in their areas by October 1, 1983 or receive no Medicare reimbursement. The Colorado Foundation for Medical Care is an established and recognized peer review organization. It very likely will be the organization selected as the statewide PRO.

The Colorado Foundation for Medical Care was founded in June, 1970 by the physicians of the Colorado Medical Society to serve as a statewide non-profit peer review organization. Its other objectives were to improve the quality of health care and utilization of health care facilities, to service public and private insurance beneficiaries, gather and develop health services data for purposes of research and to develop an organizational framework which would provide a means of participation by other health care providers. These objectives have been approached or met over the last 12 years, giving the Foundation experience and recognition in its field.

The governing body of the Foundation is its board of directors. The majority of these directors are chosen by the physician members of the Foundation from their respective regions throughout the state. The selection process of the board and the Foundation's relationship to the practicing physician become very important as the Foundation begins to play an even greater role in Colorado medicine. If designated the PRO, CFMC's influence on and interaction with the physicians and

hospitals of Colorado will become quite significant.

Therefore, it behooves each physician, each component medical society and the state medical society to maintain a constructive relationship with the Colorado Foundation for Medical Care. We must all take an interest and participate in its activities, goals and future direction to continue a positive medical climate for our patients and ourselves in Colorado. Which way will the Foundation go? Its up to you!

### Rehabilitation Groups of the American Cancer Society

#### Reach to Recovery

Reach to Recovery is a rehabilitation group for women who have had breast surgery. It is designed to help them meet their physical, psychological, and cosmetic needs. Volunteers, who have been selected by their doctors and have completed training, visit the patients in the hospital with the physician's approval. No medical advice is given but compassion and emotional support are available.

For more information,  
American Cancer Society  
Colorado Division, Inc.  
321-2464

Sharon Ritzman  
President, Colorado Medical Society Auxiliary

## Update on Auxiliary Projects

What is the statute of limitations in Colorado for filing a malpractice suit? How long does a case take from the filing of the complaint to the resolution? Who decides if a case should be settled out of court? How are expert witnesses found? How can the spouse best support the physician who is being sued? These are but a few of the questions that physicians' spouses, and perhaps many physicians, have regarding malpractice suits.

At the time that the CMS Auxiliary

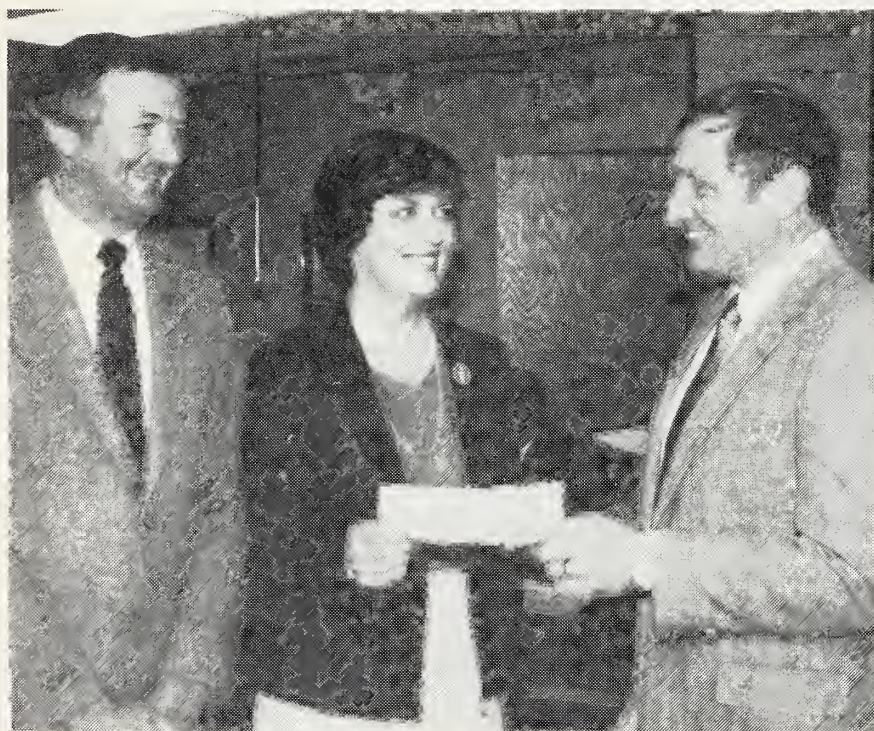

was forming an impaired physician support group, it became apparent that there was a real need for a malpractice support group as well. Spouses of physicians going through malpractice suits often have many unanswered questions regarding the suits, and no readily available place to turn to find the answers. This confidential malpractice support group will be available to answer these questions.

In addition, in cooperation with COPIC, this month we will publish a

brochure addressing the most frequently asked questions. The answers to these questions were written in lay terms by malpractice defense attorneys, and then reviewed by medical society officers and COPIC. These brochures initially will be sent to all medical society members in an upcoming issue of *Colorado Medicine* and will then be used as an auxiliary membership tool.

The auxiliary will again present one of the scientific sessions at the annual meeting in Tamarron. This session will go along with the formation of the impaired physician support group and is titled "The Alcoholic Physician." The featured speaker will be Joseph R. Cruse, MD, who is medical director of the Betty Ford Center at Eisenhower Medical Center in Rancho Mirage, California. It will also consist of a panel made up of Dr. Cruse, Jayne Howard, who is coordinator of the auxiliary's impaired physician support group, and a physician member of the CMS Physician Health and Rehabilitation Committee. Dr. Cruse is an excellent speaker and it should be a most enlightening session. Do plan to attend.

One of the other areas in which the auxiliary has been very active this year is AMA-ERF. As the result of our very ambitious chairman, Mid Unfug, we increased the auxiliary's AMA-ERF contribution by 40%. The total raised by the auxiliary was \$23,222.19. This provides a big boost in support for our medical schools and students. Congratulations to Mid and all of the county chairmen who worked so hard. They and all of the other hard-working auxiliaries are what makes this job so rewarding.

Mrs. Sharon Ritzman, President of the Colorado Medical Society Auxiliary, presents a check from the AMA/ERF (American Medical Association/Education Research Foundation) for \$21,577 to Dean of the University of Colorado Medical School, M. Roy Schwarz, MD, as CMS President Merlin G. Otteman looks on. The presentation was made at a CMS Board of Directors meeting this spring.

## A Summary of 1983 Legislation

by Carol Tempest, Director  
CMS Division of Government Affairs

the  
lobby

A tired legislature finished in the early hours of May 22nd and took a month off before returning on June 20th to consider gubernatorial vetoes and last-minute details. Not one new program was funded which could be a first. Little of interest to CMS has been scheduled for interim study by the legislators, so the next few months should give us a catch-up.

Here is a final tally sheet on 1983's legislation:

**HB 1014** Failure to Report Child Abuse (Prendergast): CMS monitored. Signed by governor.

**HB 1070** Child Seat Restraint (Artist): CMS supported. Awaiting governor's signature.

**HB 1076** Inspection of Patient Records (Arnold): Signed by governor.

Pertains only to hospital records. This bill was drastically and wisely amended in the Senate HEWI committee to say only that if a physician is brought in for an outside opinion as to whether a patient will be harmed by seeing his records, that physician must consult with the attending physician.

**HB 1090** Damages for Wrongful Death (Lee): CMS strongly opposed. The bill was killed in the Senate Business Affairs committee.

**HB 1129** Health Care Program for Medically Indigent (Lee): This bill passed and thus statutorily creates a medically indigent program. Executive authority is in the Health Sciences Center. The medically indigent dollars in the long appropriations bill, except for a few specific programs in the Department of Health, were allotted roughly as follows:

\$16.3 million to DGH for primary care for people in Denver. \$15.5 million to CGH for primary care for people in the suburban donut surrounding Denver. \$1.7 million to the community maternal programs. \$1.5 million for all of the rest of Colorado.

**HB 1146** Imitation Controlled Substances (Artist): CMS supported. This was an updated version of

Representative Artist's previous bill recognizing that imitation controlled substances dangerously mislead especially young people. The bill is now law.

**HB 1184** Hospital Surgical Privileges For Podiatrists (Fine): CMS opposed. The bill has been signed by the governor. Mandates surgical privileges for podiatrists in hospitals; was amended to the point of requiring co-admission by a physician if a hospital board or staff so chooses. The bill now speaks only to county or district hospitals.

**HB 1185** Persons Having A Terminal Condition (Underwood): Opposed by CMS in the introduced version. Killed early in committee.

**HB 1386** Costs for Newborn Screening (Fine): Supported by CMS. This bill, which permits assessment of a reasonable fee for implementation of the purposes of the "Newborn Screening and Genetic Counseling and Education Act," never had a negative vote.

**HB 1495** Colorado Health Facilities and Review Council (Kopel):

Opposed by CMS. Defeated in committee. The bill allowed the Health Facilities Review Council to become a rate review council.

**HB 1520** Repeal of Certificate of Need (Pankey): The bill was passed but was vetoed by the governor.

**HB 1549** Mandating Hospice Care in Health Insurance Coverage (Skaggs): Amended in committee to allow coverage. The bill was killed prior to CMS taking a position.

**SB 10** Continuing the Advisory Commission on Family Medicine (Bishop): Supported by CMS. Signed by the governor.

**SB 45** Nurse Patient Privilege (Cole): Signed by governor. The bill provides that a registered professional nurse shall not be required to testify about a patient without the patient's permission.

**SB 95** Requirement That Medicaid Recipients Pay For a Portion of the Medical Care Received (Dodge): Awaits governor's signature and could possibly be vetoed. The co-payment must be collected by the provider.

**SB 141** Physician Relicensure — Continuing Medical Education (Phelps): Signed by governor. States that applicants for relicensure shall not be required to attend and complete continuing medical education programs, except as directed by the Board of Medical Examiners to correct deficiencies of training or education.

**SB 150** Office of Public Health Administrator (Allard): CMS opposed. Signed by governor. Removes the current requirement that county and district public health administrators be physicians and that they be employed full-time.

**SB 152** Certification of Physician Assistants (Hefley):

Awaiting governor's signature. Requires that PA's be certified by the Board of Medical Examiners and that the board develop rules for regulating them, especially as to writing prescriptions. No physician may be responsible for more than two PA's without specific approval of the board.

**SB 183** Regulation of Hospital & Health Care Trusts (Fowler): Opposed by CMS. Provided that trusts such as COPIC shall be subject to in-

(Continued on p. 197.)

# What Should Your Portfolio Investment Return Be?

by Brian E. McManus

**Mr. McManus is a chartered financial analyst (CFA) and an investment advisor with William Blair & Company in Denver, managing assets for individuals as well as corporate pension and profit-sharing plans. In addition to a law degree and undergraduate degree in engineering, he holds an MBA from Harvard. He is a past director of the Financial Analyst Federation and a past president of the Denver Society of Securities Analysts.**

A good number of investors, when asked what their investment goals are (i.e. what investment return they expect), reply "to make as much money as possible." Unfortunately, that is a dangerous reply because it does not address the key variables of:

- Risk level to be assumed
- Appropriateness to your financial situation
- Appropriateness to other investment alternatives available at that time

Risk should be viewed as your

Brian E. McManus

willingness or tolerance to possibly lose money. Any investment that projects possible gains should also be evaluated as to possible losses. For example, a purchase call option on a common stock has the possible risk of becoming worthless i.e., going to zero, if the underlying common stock declines. A commodities contract can also be totally wiped out if prices turn against you. A real estate venture is unlikely to go to zero value, but it could become unsalable for a number of years, tying up your money at the same time interest charges on borrowed funds and operating expenses cause a cash drain. Other investments have varying degrees of risk. For example, outright purchase of common stock usually means you have the risk of partial loss of your investment, but the price of stock is unlikely to go to zero.

## **Appropriateness to your financial situation**

Investments should be tailored to meet your needs, goals and risk tolerance. Your needs are a function of your age, income-earning years remaining, financial obligations and retirement plans. A younger person can assume greater risk in seeking greater return because there are sufficient years remaining to recoup any major losses. A person near retirement age should be very interested in retaining the principal of accumulated retirement funds. Peace of mind may be one of the most valuable parts of any retirement program.

## **Appropriateness to other investment alternatives**

Money, or capital, is a very liquid medium. It knows no geographical boundaries and flows easily from one country to another, from one type of investment to another, from one particular situation to the next one. Consequently, in an open market, investments alternately become overvalued and undervalued. Successful investments are made with the knowledge of alternative investment returns. For example, it may be better to be in stocks than in bonds. Several years ago it was rewarding to be in oil and gas deals, but there was a time to get out that many people missed. Sometimes it is best to simply be in cash (high yielding, liquid securities or Treasury Bills). Rarely can an invest-

ment be viewed in a vacuum. In summary, because all investments compete for the same investment dollar, the relative attractiveness of each should be considered.

### How do You Decide?

You seek the advice of a professional. Unless you can devote full time to the complex field of investments, it is extremely difficult, if not impossible, to constantly filter, evaluate and monitor financial investments. Part-time investment management is no easier to do than for a layperson to practice medicine, law or any other endeavor where educational background and on-the-job experience are important. One of the most frequently committed errors is when a person, by himself, makes a successful investment by chance or through personal familiarity with that area. He then believes he can transpose that skill to other investment vehicles and fails. A well chosen professional can be invaluable. In choosing one you should review the following:

- Educational training of the professional consultant
- Work experience in the specific area where you seek advice
- A clearly understandable performance record for a number of years
- Association with high quality firms in the investment area
- Endorsement or recommendation by people you trust
- A business structure that is capable of helping you specifically. A large staff may not translate into the service you need.

### What Should You Expect in the Way of Investment Return?

First recognize that the expected return on all investments in dependent upon a number of variables. The major variables are the economy, interest rates, the rate of inflation, government policy and investor psychology, but there could be other factors that are important in any given situation. Secondly, it should be noted that the annual return for the same investment will normally fluctuate because of the external variables that come to bear upon that investment. If liquidity has been maintained, you can terminate a problem investment but otherwise you will have to live with it and hope

for a turn for the better. It points up the importance of the initial analysis and research.

With respect to the expected return, let's look at some actual historical returns. Figure 1 shows proxies for bonds and stocks. The S&P 500 Index is a capitalization-weighted index of 500 common stock securities. For bonds we have chosen the AAA Bond Index.

The average annual total return (capital appreciation plus dividends) for the S&P 500 Stock Index over the last nine years is 11.0%. This compares closely with the 50 year

## Part-time investment management is no easier than for a lay person to practice medicine.

average return for all common stocks of approximately 10-11%. This return differs from that of the Dow Jones Industrial Average because the DJIA is an index based on a very small sample of only 30 stocks. Moreover, the names have changed over the years, it is heavily oriented toward industrial and basic industry issues, and it does not give equal weight to each holding (IBM is the dominant factor because of its large capitalization). The S&P 500 is a broader based index and a more accurate indicator of the overall market.

Bonds have not fared well over the past 10 years due to high levels of inflation. In fact, bonds declined in value in every year but two since 1974, posting a net decline. Historically bonds were considered to be very safe, but in an inflationary economy, that simply has not been

the case. Today some observers feel interest rates will decline further (which is positive for bond prices) but with the prime rate already having moved from 21.5% to 10.0%, it is obvious that most of the move has already taken place. Looking to the future, if inflation holds steady at current levels, you could realize a return equal to the current yield to maturity of bonds. If interest rates declined, you could realize some capital appreciation in addition.

For common stocks, it is not unreasonable to expect that the historical rate of return of 10-11% will hold true. Furthermore, if inflation does hold at or near current levels, we could see greater appreciation in common stock values over the next several years. The reason for this is that common stock valuations fluctuate from undervaluation to overvaluation, and the decade of the 1970's was generally one of undervaluation because of double digit inflation. Historically stocks have sold at 14 times earnings and in 1961 they reached 21 times; today the market is approximately 11-12 times. At the time of the first OPEC oil price hike, inflation severely outperformed both stocks and bonds, while asset "plays" such as gold, silver, timber and minerals did very well. In the past 18 months the reverse has been the case. You can see the importance of your inflation projection in looking to the future.

For any group of investments, structure is very important. Your investments should be considered as a portfolio, and have appropriate balance and diversification. Whether they're aggressive or conservative will depend upon your needs and objectives, but obviously everyone's needs are slightly different. These are the things that should be discussed with your investment adviser in order to develop a successful strategy for the future. Good luck.

Year ►	1982	1981	1980	1979	1978	1977	1976	1975	1974

# What is a Tax Shelter?

by Howard H. Potter

**Mr. Potter is a senior partner in the law firm of Vaughan and Potter. The firm specializes in tax shelter investments. He is both an attorney and a CPA. Additionally, he is a member of the American and Colorado Bar Associations, Colorado Society of CPAs and the American Institute of CPAs.**

The words "tax shelter," "tax shelter investment" and "tax-advantaged investment" have been overused by the financial community in the last few years, which has confused the public about what is or is not a tax shelter. To add to this confusion, the IRS is battling the tax attorneys and CPAs about "abusive" shelters. The IRA maintains that all tax shelters are abusive; attorneys

claim none are. Therefore, it is understandable that people are confused, concerned and apprehensive about anything that is presented as a tax shelter.

Very simply, tax shelters exist because of Congress and can be modified at its will. Tax shelters are a legitimate form of investment and can be used effectively to reduce income taxes. However, because of a

few tax shelter investment programs which have lacked economic substance, Congress has recently passed laws to eliminate or reduce those programs. In the Economic Recovery Tax Act of 1981 and the Tax Equity and Fiscal Responsibility Act of 1982, Congress went a long way to eliminate programs that were abusive.

Tax shelter investments exist only because they are encouraged to do so by our income tax laws. When the government believes that one of its programs requires capital, then a tax law is passed to channel additional funds to achieve certain social and, sometimes, political objectives. The tax shelter advantages gained by such regulation enhances the economic viability of the project because of immediate deduction of certain costs, rapid recovery of other tax credits, depreciation, interest and so on.

A tax shelter is nothing more than an investment that has been structured to yield maximum benefits from certain provisions incorporated into the tax laws. So when there is a national program to provide housing for the low-income or elderly population, then tax laws are passed to encourage investments into that area. Thus, people who make these investments have greater economic return because of the immediate or accelerated deductibility of various costs and expenditures, tax credits on the bottom line of the tax return, such as investment tax credit, or conversion of ordinary income to capital gain. Any of these may reduce the total tax burden of an individual in the higher tax brackets.

Other types of tax shelters provide a permanent deferral of income taxes, in addition to providing deductions and credits. These include municipal bonds, which can be exempt from both federal and local taxes. Pension and profit-sharing plans allow for deduction of contributions at the time of investment, with taxation when the funds are withdrawn at retirement, presumably when the individual making the investment is in a lower tax bracket. Earnings in the fund are also free of tax until withdrawal.

In addition, tax shelters sometimes defer income from year to year, thereby availing the investor the use of the money and gaining the time

Howard H. Potter

value of money from the investment. Conversion to long-term capital gains can reduce the maximum tax rate from 50 percent to 20 percent by excluding 60 percent of the profit from the taxpayer's income in determining his regular tax liability.

A program offering investment tax credit or rehabilitation credit provides vast advantages to a taxpayer who is in the 50 percent income tax bracket, because it directly offsets his bottom line tax. This offers the taxpayer the advantage of not only creating an investment, but also reducing his income taxes. Thus, the taxpayer can enhance his investment by using the tax laws to his advantage.

The most utilized form of tax shelter investments are structured as limited partnerships in which the investors are the limited partners and the tax deductions or credits are passed directly to the individual. There are many types of tax shelter investments, such as IRAs, short-term trusts, interest-free loans and tax shelter annuities.

Other tax shelter investments include more involved programs in real estate, oil and gas, equipment leasing, cattle feeding, research and development, motion pictures and books. If there is an investment opportunity, the tax lawyers, CPAs and members of the financial community have probably devised a tax shelter angle to the investment.

Most investors have neither the time nor the expertise to judge the merits of a specific tax shelter program. They are thus at a tremendous disadvantage when offered a smorgasbord of tax shelter investment opportunities. How then does an individual make a judgment about the various investment opportunities? The answer is simple. The potential investor must evaluate the people involved with the investment and he must use an expert advisor. Initially the investor may review the program by asking the following questions:

1. Is there a large international CPA firm working with the tax shelter program? Will the CPA firm prepare the tax returns, the K-1s and do audits of the partnership on an annual basis? Do they specifically endorse the tax concept? This is crucial to the overall integrity of the program and to the people involved in it. "Big-Eight" CPA firms will not

become involved in tax shelter programs until they have given a considerable amount of scrutiny to every facet of the offering. Congress has assisted the investor in this area by passing laws assessing liabilities against accountants who are not sufficiently diligent in their inquiries.

2. Is there an attorney's opinion letter for the shelter, written by a reputable law firm? Is this law firm separate from the promoter of the program? Has this firm been in business for a number of years and is it a nationally known firm or a firm of regional reputation with experience in tax areas?

---

## Tax shelters are a legitimate investment and can be used to reduce income taxes.

---

3. Is this shelter presented to the potential investor by a large stock brokerage firm or a member of the NASD community who is registered to sell securities? In the past, many tax shelter programs have been offered to the public by promoters who are unregistered, unregulated, unsophisticated and frequently unscrupulous. The safety factor of having a large brokerage firm as the national underwriting broker on a tax shelter is great. If there is a large brokerage firm involved, the firm has a lot to lose by presenting a program that does not have economic viability or that will fail if the IRS challenges it.

4. Who is presenting the investment program? Does the stockbroker or NASD member presenting it have experience with tax shelters? What is his background? Does he have a reputation within the local community as a sound business professional? With what other programs has he been involved? Ask for a bank reference and a law firm reference and you can learn a lot.

5. What is the business of the tax shelter? Does it pass the "smell test"? People have a gut-level reaction to business investments. The potential

investor should feel comfortable with the business in which the tax shelter investment is involved. One of the most enlightening questions an individual can ask himself about a tax shelter investment is a paraphrase of the IRS definition of abusive tax shelters. The investor should ask himself whether this tax shelter has economic reality, inflated appraisals or unrealistic allocations. He should also ask whether the investment involves transactions in which the economic benefits outweigh the tax benefits.

6. Does the tax shelter program have cash flow? Cash flow is the immediate indicator of the economic viability or reality of an investment program. Research and development programs with no cash flow for many years, or oil and gas drilling programs that are very risky because they have little or no cash flow are frequently bad investments. They are therefore bad tax shelters and susceptible to challenge from the IRS. If the business fails, so will the shelter. Such failure may cause the investor to recapture the entire write-off in one year, as well as losing his contribution. Even worse, if the program is formed to be abusive, the investor may face severe interest and penalties.

It would be erroneous to conclude from the foregoing discussion that tax shelters as a whole are too risky for consideration. Rather it should be concluded that a tax shelter program should be approached in the same manner as any other investment with full diligence in investigation of the risks and rewards.

Since the expertise required to make that evaluation is highly technical, the potential investor should consult a professional with those technical skills before making a decision about an investment. A properly formed tax shelter, involving a viable economic enterprise, is without question the finest investment avenue open to a high-bracket taxpayer under present regulations. The investor must be certain, however, to establish that the program under consideration meets the necessary tax shelter investment criteria.

# Update: Colorado Medicaid Primary Care Physician Program

by David R. West, Program Administrator, Cost Containment and Systems Management, Division of Medical Assistance, Colorado Department of Social Services

**Editor's Note: The Medicaid budget for FY1983-84, as reflected in the long appropriations bill which was signed into law by Governor Lamm on June 12, 1983, provides for a 5% across the board increase in physician reimbursement, plus an additional 5% "incentive increase" for physicians who participate as Primary Care Physicians. The administrative procedure for distribution of the incentive pool will be developed through the continuing efforts of the Physician Advisory Council.**

An introduction to the Colorado Medicaid Primary Care Physician Program (PCPP) appeared in the March issue of *Colorado Medicine*. Since then, the development phase of the program has been completed. On March 4, 1983, the Colorado State Board of Social Services approved the PCPP regulations, developed in close cooperation with a Physician Advisory Council appointed by the governor.

Using the case management concept, the intent of the PCPP is to in-

crease patient access to physician care, to provide for continuity of care in settings other than, for example, the outpatient department of hospitals, and increase physicians' control over the Medicaid recipients' use of Medicaid benefits by asking physicians to use their pivotal position to control utilization of the health care system. The expectations for PCPP are:

**To Improve the Medicaid Recipients' Access to Primary Care: The**

PCPP will ensure that every Medicaid recipient has access to primary care and thus, a guaranteed point of entry into the health care system.

**To Establish a Personal Relationship Between the Primary Care Physician and the Recipient:** By establishing a situation in which the physician is familiar with the recipient's medical history as well as the individual recipient, continuity and quality of care are expected to be enhanced.

**To Reduce the Inappropriate Utilization of Medicaid Benefits:** Medicaid recipients will be asked to choose a Primary Care Physician (case manager). The Primary Care Physician will be responsible for managing the recipients' health care, thus controlling the access of recipients to the health care system.

This is expected to reduce the number of diagnostic tests, drugs prescribed, and overall use of hospital tests that occur in a system of care that is not coordinated.

**To Contain Medical Expenditures:** The potential for the PCPP to facilitate reductions in the utilization of higher cost hospital services by substituting a designated source for primary care is one key element behind the establishment of the program.

**To Increase Physician Participation in the Medicaid Program:** The goal is to work cooperatively with the physician community to encourage the legislature to establish a more equitable reimbursement system and to provide an incentive pool to encourage physician participation in the PCPP.

Implementation of the PCPP began on May 3, 1983 in Delta, Mesa, Montrose, Ouray, and San Miguel Counties. A phased approach will be employed to implement the PCPP throughout the remainder of the state. Table 1 outlines the planned implementation schedule (dates shown are those upon which the enrollment of recipients begins).

As each county is added to the PCPP, new Medicaid applicants will be required to choose a primary

**Table 1**  
**Primary Care Physician Program**  
**State Wide Implementation Schedule**

Date	Counties
May 1983	Delta, Mesa, Montrose, Ouray, San Miguel
July 1983	Alamosa, Archuleta, Conejos, Costilla, Dolores, Gunnison, Hinsdale, La Plata, Mineral, Montezuma, Rio Grande, Saguache, San Juan
August 1983	Eagle, Garfield, Grand, Jackson, Moffat, Pitkin, Rio Blanco, Routt, Summit
September 1983	Larimer, Logan, Morgan, Weld
October 1983	Adams, Arapahoe, Boulder, Clear Creek, Denver, Douglas, Elbert, Gilpin, Jefferson
December 1983	Bent, Crowley, Huerfano, Las Animas, Pueblo, Otero
January 1984	Cheyenne, Kit Carson, Lincoln, Phillips, Sedgwick, Washington, Yuma
February 1984	Chaffee, Custer, El Paso, Fremont, Lake, Park, Teller

care physician within five working days. Individuals already on Medicaid will be required to choose a primary care physician within six months of that county's implementation date. Recipients who decline to choose a Primary Care Physician will be issued Medicaid authorization cards allowing them to receive only limited benefits (primarily emergency care).

The effort to enroll physicians into the PCPP in each county will begin approximately two to three months prior to the dates indicated in Table 1. Representatives from Medicaid will be contacting physicians through component medical societies or hospital medical staff meetings. In addition, each licensed physician in Colorado will receive by mail information about the PCPP and the opportunity to enroll as a primary care physician. (It may not be appropriate for many physicians, i.e., specialists, to be Primary Care Physicians. Medicaid-enrolled physicians wishing to continue to see Medicaid patients as specialists do not need to enroll in the PCPP.)

To date, the efforts to enroll Primary Care Physicians in 18 counties have been very successful. As of this writing, 135 physicians have decided to become Primary Care Physicians in the PCPP. Table 2 summarizes the enrollment statistics.

As the implementation of the PCPP continues, the Department of Social Services will continue to work with the Physician Advisory Council to fine-tune and evaluate the performance of the PCPP in terms of administrative operation and desired outcomes. During this process, inquiries from interested physicians are welcome. You may direct your comments and questions to the Department of Social Services directly by calling the PCPP Hotline, 1-800-221-3943, or 866-4816 in the Denver area.

**Editor's Note:** The Medicaid budget for FY1983-84, as reflected in the long appropriations bill which was signed into law by Governor Lamm on June 12, 1983, provides for a 5% across the board increase in physician reimbursement, plus an additional 5% "incentive increase" for physicians who participate as Primary Care Physicians. # Mildred Doster

by James J. Delaney, Jr., MD, Historian, Colorado Medical Society

The most recent recipient of the Florence Sabin Award is Mildred Doster, MD, long-time Assistant Director of the Denver Public Schools Health Division and, more recently, senior citizens' advocate. (Ed. note: For more information on Florence Sabin, see Dr. Delaney's article in the February, 1983 issue of *Colorado Medicine*.)

Dr. Doster was born in Doster, Michigan, on October 22, 1908. Her great uncles founded the town, which is located in the middle of the lower peninsula of Michigan. She was the older of two girls, both born

at home on the farm. Her interest in medicine was motivated by the tragic death of her father when she was 12 years old. She remembers that her father bled to death from a throat ailment. Dr. Doster says she wonders to this day whether better medical care might have saved him.

After graduating from an excellent church-supported college in Kalamazoo, Michigan, she entered the University of Michigan Medical School. There were ten women in a class of 100. Dr. Doster says that Michigan always has had a high percentage of women medical students.

Her husband, Bob Virtue, taught her biochemistry class. They became attracted to each other, but Dr. Doster refused to date him until after she had written the final exam.

After graduating from medical school she interned at the Women's and Children's Hospital in Cleveland, Ohio. She and Dr. Virtue were married following her internship and she moved to New Orleans where she worked part-time as a resident physician in obstetrics at a women's dispensary and part-time as a medical resident at Louisiana State University.

When the couple moved to Denver in 1937, Dr. Doster began private practice, but had to pass the basic science exams before obtaining her license. At the time, she had a strong interest in obstetrics. The frequent night calls during this period convinced her husband that Dr. Doster should use her maiden name rather than her married name so that they would know for whom the night calls were intended.

Soon after moving to Denver, Dr. Doster went to work for the Denver Public Schools as an examiner. She liked the work and liked working for Dr. Amos Beagler, the first full-time health officer in the school system. Working with the school children and officials stimulated her interest in public health issues.

She decided to forego private practice for work in the public health area. She earned a master's degree in public health during the next two years by attending summer school.

When Dr. Doster and Dr. Virtue moved to Iowa City, Iowa for his anesthesia residency, she was appointed county health officer for seven southeastern Iowa counties. She did a lot of traveling, but found that almost everyone was interested in helping her.

Dr. Doster recalls that the farmers spent more money on vaccinations and care for their pigs and cattle than for their own families. With a little education and cajolery she was able to establish vaccination programs, improve sanitation and general health conditions in her domain without making anyone angry.

Upon their return to Denver, Dr. Doster took up her old job with the schools. Her discussion about her work makes it sound both diversified

and demanding. The job included screening children for health problems, educating the parents about health care and making sure that appropriate and accurate health information was included in the schools' curriculum.

With the help of several part-time physicians, mostly local pediatricians, and a cadre of public health nurses, Dr. Doster and staff were able to establish and maintain an excellent school health program.

She was retired by the school system in 1974 at the mandatory retirement age of 65. But, like her husband, Dr. Doster stayed on part-time for two more years to help out. She has been active in many public health-oriented groups over the years. Among other activities, she has been Chairwoman of the Colorado Heart Association and Chairwoman of the Colorado Medical Society's Council on Public Health. She is very involved with senior citizen advocacy programs.

Additionally, Dr. Doster sits on the boards of several nursing homes. She is the current Chairwoman of the Board of Directors of Capitol Hill Health Resources, Inc. This organization has recently purchased the Emerson School at 14th and Ogden and turned it into a center for senior citizens' activities.

The building houses the offices of All Seniors Inc., which is the parent organization for such programs as Foster Grandparents, Meals on Wheels and other outreach groups. Dr. Frank McGlone's organization recently opened a clinic there.

Dr. Doster says that the most significant change in medicine she has seen over the years is the shift from infectious diseases to the emergencies of iatrogenic diseases such as cancer, obesity, etc. She laments the tragedy of elderly people who waste away for lack of family care and disinterest in life.

In addition to the Florence Sabin Award, Dr. Doster was one of five women honored in 1983 as "women of the year" by the Big Sisters of America.

The Denver Public Schools may have lost a dedicated employee, but the senior citizens of Denver have gained a staunch advocate. Dr. Doster and Dr. Virtue have spent a long and happy time together, supporting each other's vocations and

avocations. When one stops to think about it, this team of husband and wife have probably touched the lives of more Coloradoans than any other physicians or group of physicians in the state. Dr. Doster's work in the Denver Public Schools and her other community activities have certainly affected many people for the better. And think of all the people who have been anesthetized by someone who has learned much of his or her skills from Dr. Virtue. The state and our honorable profession have been well-served by these talented, dedicated physicians and educators.

**The 60 seconds you take to read this message from *Dean Witter* could be your most profitable 60 seconds this year.**

In the face of fluctuating interest rates, budget deficits, inflation, deflation, changing tax laws and the uncertain economy, it's important that you maximize the potential of your investment capital.

Managed Futures Accounts at *Dean Witter* can help. They offer:

- Positive performance potential in either bull or bear markets
- Professional money management system with documented track records
- Maximum tax on profits of 32 percent
- Day-to-day liquidity

**Consistent Performance**

The key element in a managed futures account is the trading advisor's ability to perform consistently. *Dean Witter* has carefully constructed a roster of Commodity Trading Advisors (CTAs) who have demonstrated just that ability. (Note: Past performance does not guarantee future results.)

# Robert W. Virtue

*by James J. Delaney, Jr., MD, Historian, Colorado Medical Society*

The dean of active anesthesiologists is Robert W. Virtue, MD, professor emeritus at the University of Colorado Health Sciences Center. He was formally retired from the university in 1969, but can still be found almost daily in the operating rooms or labs at Colorado General Hospital (University Hospital), which is where I found him on a recent Wednesday morning.

Dr. Virtue is a native of Denver. He was born at home on September 12, 1904. His parents, who had met at the Normal (Teaching) School in

Illinois came to Denver for his father's lung problem. He was thought to have tuberculosis, but apparently it was pneumonia. A daughter was born to the family two years later and still lives in Denver.

Dr. Virtue attended Edison Grade School, North High School and Denver University. Following graduation from high school in 1920, he delivered telegrams by bicycle for Western Union to earn enough money for college. After graduating from the University of Denver, he began teaching at the high school in Paonia, Colorado. He was promoted

to the position of principal in three years.

The prospects for further advancement in Paonia were not very encouraging, so Dr. Virtue applied for a fellowship in chemistry at the University of Michigan. The fellowship for chemistry was not available, but one in biochemistry was, so he took that. Thus chance started him on his way to becoming an anesthesiologist.

The fellowship lasted from 1929-33. While teaching medical students biochemistry, Dr. Virtue met his future wife, Mildred Doster. He finished his fellowship in the midst of the Depression and was thankful to obtain a job at the Elgin Illinois Hospital for the Insane as an orderly. The salary was \$40 a month plus room and board. The best thing about the job was that he was able to carry on some research during his stay there.

Six months later, Dr. Virtue obtained a teaching position in chemistry at the college in Mount Pleasant, Michigan, where he taught from 1933-34. College teachers were relatively well-paid in those days, earning only slightly less than the

average doctor or lawyer. (How times have changed.)

In 1934 a biochemist friend of Dr. Virtue's at Louisiana State University moved to California. Dr. Virtue applied for his job and moved to New Orleans. Meanwhile, his wife-to-be finished medical school and was interning in Cleveland. They were married in 1935 and Dr. Doster came to New Orleans to work in a women's and children's hospital. Dr. Virtue was rather unenamored with his boss at LSU, so he left and returned to Denver University in 1937. He recalls that the year after he left LSU his former boss was fired, thus confirming his own opinion of the man.

When Dr. Virtue returned to DU, he was pursuing research in bioassays. He turned to the medical school for help in his work, because it had some animal research facilities that were not available at DU. Over the next five years, as his research advanced, Dr. Virtue realized that he needed to know more about physiology to carry on his work.

The combined influences of his physician wife, work at the medical school and the desire to know more about physiology, prompted his decision to apply for medical school, despite his age of 38. With the help of Dr. Robert C. Lewis, who was head of the Department of Biochemistry and Acting Dean, he was admitted to the University of Colorado Medical School in 1943, under a wartime accelerated program.

A classmate of Dr. Doster's who was an anesthesiologist encouraged Dr. Virtue to consider her specialty. Following graduation in 1946, he interned at Colorado General Hospital for 14 months and then entered an anesthesiology residency at the University of Iowa in 1947. After completing his residency in 1949, he returned to Denver to head up the anesthesiology division at Denver General Hospital.

He came back to the medical school after two years as the head of the Division of Anesthesiology. At the time, the university and Denver General Hospital had a close working relationship. There were only four major departments at the university, medicine, surgery, pediatrics and obstetrics/gynecology. Dr. Virtue remained in this position for almost 20 years, building

a strong residency program and surgery support system.

He retired in 1969 and went into private practice. He was an attending physician at General Rose Hospital (now Rose Medical Center) until 1975. The medical school had some difficulty replacing him. In fact, his retirement was the main stimulus leading to the formation of the Department of Anesthesiology. A suitable replacement could not be found who was willing to be a division head under the Department of Surgery. In fact, it took almost two years to find a replacement. Dr.

Virtue stayed on as acting head to maintain the integrity and educational excellence of the anesthesia residency program.

During the next six years there was a fair amount of unrest in the department. A new head was recruited. The new chairman, Dr. Aldrete, asked Dr. Virtue to come back and help out with the teaching for awhile. He is still "helping out" almost every day.

In addition to Dr. Virtue's extensive medical research and service, he enjoys mountaineering, photography and traveling.

Dr. Virtue and his proteges have contributed much to the care and research of surgery over the years. One of the most famous eras occurred between 1950 and 1956 when he was part of the team that pioneered the successful use of hypothermia for surgical procedures, primarily on the heart.

This research and application began in 1950 at a chest surgeons' conference in Estes Park at which Dr. Bailey from Hannehman in Philadelphia reported two cases of heart surgery using hypothermia. Dr. Lelihei in Minnesota also was doing research on hypothermia at the time. After returning from the conference, he and Henry Swan decided to start researching hypothermia. With the help of the surgical residents who were active in the dog lab, they quickly worked out some of the problems and performed their first hypothermia operation in November, 1952.

The patient was a young boy from Trinidad with an atrial-septal defect. The surgery was a success. Dr. Virtue says that two of the important advances were made by residents. Dr. Irving Zeaving worked out the technique of using a combination of ice and water to lower body temperature rapidly and safely. The ideal body temperature for surgery is about 28 degrees centigrade. The incidence of refractory fibrillation increases rapidly below that temperature. Dr. Art Prevedel introduced the idea of injecting

prostaglandin into the cross-clamped aorta to prevent fibrillation and slow the heart to a rate of 12-20 beats per minute, making surgery easier.

With this technique the circulation could be cut off safely for periods of about six minutes. One such episode was usually sufficient to correct most intra-cardiac defects. Over the next four years, more than a thousand patients were operated on at Colorado General Hospital with the aid of hypothermia. The results of this team seemed to be superior to any other team using a similar technique.

The patients were anesthetized and then placed in a bathtub of ice water. As long as they did not shiver, their temperature decreased rapidly and safely. When the esophageal temperature reached 32 degrees centigrade, they were removed from the tub and the surgery was begun. The body temperature usually continued down to 28 degrees centigrade. Dr. Virtue says he does not recall any deaths directly related to hypothermia per se and that the overall mortality rate for their cases was very low.

The technique of hypothermia became obsolete with the development of the heart pump in 1956. The success of the surgical team in the previous four years seems almost like a "flash in the pan" in relation to the history of surgery. There are still several hundred people living who owe their lives to this short-lived technique.

# The Hospital Medical Staff — 1983

by Andrea C. Mitchell

---

***Andrea Mitchell is a registered nurse whose work has been in the area of health care quality assurance and utilization review. This article is adapted from a research paper prepared for the University of Colorado's Masters in Business Administration Program.***

---

Closed versus open hospital medical staffs has become a "hot" issue among hospital administrators and physicians.<sup>1</sup> The issue is really much broader than hospitals can legally limit the size of their medical staff. There is clearly a legal basis to say that hospitals can, in fact, not only limit the size of the staff but also put limitations on the qualifications of physicians on the staff. Hospitals can also limit the physician staff to a particular medical group if it does so to control costs or quality of care.<sup>2</sup> The real issue is the viability of the traditional hospital medical staff structure and its relationship to the hospital organizational structure.

The hospital organizational structure is one which has evolved from a historical form in which the physician and the hospital had a much different relationship than is the case today. Hospitals did not originate to provide medical care. Hospitals were historically a "way station" where traveling or homeless people were allowed to stay. Because many homeless, poverty stricken people were also sick it became necessary to begin providing some nursing care.

Hospitals initially developed their reputation as places for the dying because of the filthy conditions and lack of awareness of aseptic technique which led to increased sickness and death among the people housed there. Physicians at that time provided care in their patients' homes. As the hospital became more "medical" physicians were asked to donate their time by providing chari-

ty care to those people who required it. Such care was provided free by the physician as part of his donations to charity and duty to society.<sup>3</sup>

Over the years the hospital evolved into an institution committed exclusively to medical care and oriented toward maintaining the primary relationship between the physician and his patient. The present day hospital is organized in a bureaucratic fashion with an administrative hierarchy and official lines of communication, authority, and responsibility. Much like other businesses, the typical hospital has an administrative head, several departments or divisions, and a pyramidal structure with managers, supervisors, and line staff. Unlike most businesses, however, the hospital has a major organizational component which exists beside the hospital organization — the medical staff organization.

The medical staff of a hospital has its own organizational structure. In the traditional community hospital it is a relatively loosely structured group of physicians without the formal hierarchical structure which is typical of most organizations. The physicians have many professional commitments and responsibilities outside the hospital (i.e. they maintain an office practice, they have staff privileges at other hospitals, etc.). Usually there are relatively few responsibilities which the physician must fulfill to maintain his or her membership on the staff. There may be a large number of written rules

and regulations; however, a physician's professional behavior is relatively unmonitored and unsupervised. Until recently, except in some governmental (i.e., military) hospitals and some specialty hospitals the medical staff has functioned autonomously relative to the hospital bureaucracy.<sup>4</sup>

Many physicians see the hospital organization and its bureaucratic administration as an irritant. The physician's primary concern is the relationship between himself and his patient. From the hospital administrator's point of view the physician's high degree of power and autonomy make the hospital business very difficult to manage.

Organizationally, physicians function as "guests" of the hospital.<sup>5</sup> From the hospital administrator's point of view he or she is expected to manage a business in which the person who makes nearly all of the decisions about the day-to-day workings of the business is not an employee of the business but an independent practitioner who uses the hospital as a place in which to conduct a good share of his or her work. From the physician's point of view, he or she is the primary decision-maker about the services provided by the hospital but has no administrative, responsibility or authority for running the hospital. Both physicians and administrators are becoming aware that the traditional role of the physician in the hospital as an autonomous care provider is no longer workable.

There is pressure being applied from a number of quarters which will result in changes in the traditional relationship between the hospital and its medical staff organization.<sup>6</sup> First, there is tremendous pressure to control the costs of health care. This pressure is being applied not only by third party payers (including the government) and large employers who are bearing the brunt of payment for hospital and medical care, but also by consumers of health care.

The latter are beginning to realize what an increased deductible means in terms of trips to the doctor's office, elective surgery, or follow-up treatment or care. From the hospital administrator's point of view, it is necessary for physicians to become aware of and accept responsibility

for their "gate keeper" function. The physician, while not under the administrative authority of the hospital organization, controls who goes to the hospital, how often, for what reasons, and what services are delivered once the patient goes to the hospital. Physicians must be aware of the impact on hospital costs when they want several different brands of the same medication included in the hospital formulary. They must become aware of the total costs involved in keeping patients in the hospital even one day longer than necessary.

The hospital cannot continue to exist with the belief that the physician staff is entirely responsible for controlling the quality of care delivered by the hospital medical staff. Recent court cases have made the hospitals aware that they must have some authority relative to medical staff privileges to accompany the legal responsibility they have for the quality of care delivered by the physician staff.

"The doctrine of corporate negligence which had its judicial birth in *Darlington vs. Charleston Memorial Hospital*, makes the **hospital as an institution** ultimately responsible to the **patient** for malpractice by its dependently retained physicians if it knew, or ought to have known, of a physician's incompetence. Thus, an initial mistake in admitting an unqualified physician to the medical staff can result in massive liability to the hospital and its officers if the physician later commits an act of negligence."<sup>7</sup>

From the physician's perspective, the costs of malpractice insurance which are borne by all physicians regardless of their individual competence, make the quality of care delivered by all physicians a matter of concern.<sup>8</sup> There is evidence to suggest that the traditional loosely organized hospital medical staff has inadequate control over the quality of care delivered by physicians in the hospital.<sup>9</sup> The medical staff organization, as well as the hospital, may be held responsible if they are negligent in allowing medical staff privileges to be held by incompetent physicians.<sup>10</sup>

Physicians in Denver are not faced with the physician "glut" that exists in many other large cities. However, the increased proportion of specialty physicians everywhere creates

pressure for change in the traditional medical staff organization/hospital administration relationship.<sup>11</sup> Very few physicians function today without consultation from and cooperation with other physicians in the provision of care to their patients. The traditional medical staff organization developed around the independently functioning physician who required only a place to practice. The increased number of interactions, and resulting complexity of relationships, among physicians and between physicians and the hospital's other care providers requires that there be more structure, more rules and more specific procedures.

What is likely to happen to the structures of the medical staff organization or the hospital organization? Several possibilities have been explored both theoretically and in the "real world."

One possibility which is already being implemented by some hospital medical staffs is the development of a more highly structured medical staff organization. This increased structure usually results in an increased number of physicians becoming salaried employees of the medical staff organization in administrative positions within the medical staff. In essence, this is a "bureaucratization" of the medical staff, with the development of a well-defined hierarchy and explicit lines of communication, authority, and responsibility within the medical staff.

Such a medical staff organization can serve as a "buffer" between the physician and the hospital organization. It can promote the physicians' interests with the hospital administration in a more organized manner. In addition, it can provide for the increased structure necessary to guarantee high quality care and have a role in controlling costs which are directly related to physician patterns of practice.

From the hospital administrator's point of view, the "bureaucratized" medical staff may well be easier to deal with than the more loosely structured medical staff organization. The chief of staff has more ability to "deliver" the staff in negotiations with hospital administration, and the administrator is more assured that agreements between

the hospital and the medical staff are fulfilled on the part of the medical staff. From the individual physician's perspective, the increased structure sets limits on the physician's scope of independence and autonomy. That is, the organization may develop explicit guidelines for what constitutes quality care and for the ordering of expensive procedures and tests.

Another possibility which is somewhat more remote involves a "rationalization" of the relationship between the hospital administration and the medical staff organization. This rationalization is referred to by William R. Scott, of Stanford University, as the "conjoint" relationship.<sup>12</sup> In this conjoint organization, the administration of the hospital has responsibility and authority to make decisions about the delivery of care on the "macro" level and the physician has decision-making responsibility and authority for patient care decisions on a "micro" level.

In other words, the hospital administration may develop guidelines for the type of patients to be treated in the hospital, the extent of treatment which will take place, and the limitations which will be placed on the cost at which patients will be treated. At the micro level, physicians may retain control over the professional care delivered to their patients. This system is a "rational" one in that administrators have administrative responsibility and the physician has professional responsibility.

Implementation of this type of organizational structure requires that the organization have explicit goals and that these goals be agreed upon by both the administration and the medical staff organization. Both the administration and the physician organization must work toward the same goals in order for such a structure to function. A drastic change must take place in the relationship between the individual physician and the medical staff as well as in the relationship between the physician staff organization and the hospital administration.

The third and probably least desirable possibility is an integration of the medical staff with the hospital organization to the extent that the two hierarchies are blended into one. Clearly, in this structure the

final authority for all decision making is the hospital hierarchy. The medical staff organization is not a separate component; rather the physician staff are employees of the hospital organization. This is a situation which has existed in some hospitals for many years, e.g. in military and some specialty hospitals. Even though this results in a very highly structured health care delivery system there is evidence to suggest that this type of structure does not result in the delivery of the highest possible quality of care.<sup>13</sup>

The future of the medical staff organization's relationship with the hospital organization is uncertain. One thing is certain, and that is there will be changes taking place. It is necessary for an organizational structure to exist which will promote the provision of high quality, cost effective care. In order for physicians to retain the degree of control necessary to assure that their patients receive high quality care, they must be aware of the changes taking place in the health care environment and their role in that environment.

# Special Bulletin

You may expect to receive the **prospectus** for the Land and Building Partnerships in the latter part of **July**. These two offerings will provide an excellent investment for you personally as well as for your business and/or pension fund. Please stay tuned to the next issue of *Colorado Medicine* for further details!

**FOR INFORMATION PURPOSES ONLY**

**SUMMARY OF OFFERING**

**\$2,600,000 maximum September 1, 1983**

**COLORADO MEDICAL LAND PARTNERSHIP, LTD.**

5,200 Units of Limited Partnership Interests — \$500 Per Unit

Minimum Investment: Five Units (\$2,500); or

Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

Acquire 10.0 acres of land from the Colorado Medical Society ("CMS"), sell approximately 5.0 acres ("East Tract") for a substantial return of funds to investors and to lease the remaining 5.0 acres ("West Tract") to the Colorado Medical Building Partnership, Ltd. with the sale of the West Tract to CMS to occur within 5-10 years.

**FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Land Partnership.

2) Units of Interest to be sold: Up to 5,200 Units for maximum gross proceeds of \$2,600,000.

**INVESTMENT OBJECTIVES:**

The Land Partnership's objectives are primarily designed for pension and profit sharing programs and include: (i) to share the appreciation of the equity of the East and West Tracts, which appreciation will be realized upon the sale of such Tracts; (ii) to provide the Limited Partners with cash distributions generated through lease payments commencing approximately August 1, 1983; (iii) to provide the Limited Partners with a substantial return of funds upon the sale of the East Tract for a minimum of \$1,400,000 guaranteed by CMS; any cash in excess of \$1,400,000 will be allocated 75% to the Limited Partners and 25% to the General Partners; (iv) to obtain long-term appreciation in the West Tract of not less than \$1,500,000, guaranteed by CMS, with the sale to occur within 5-10 years; and (v) to provide Limited Partners with an increased projected after tax annual return upon the sale of the East Tract.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

**FOR INFORMATION PURPOSES ONLY**

**SUMMARY OF OFFERING**

**\$3,800,000 maximum September 1, 1983**

**COLORADO MEDICAL BUILDING PARTNERSHIP, LTD.**

7,600 Units of Limited Partnership Interests — \$500 Per Unit

Minimum Investment: Five Units (\$2,500); or

Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

To lease approximately 5.0 acres of land from the Colorado Medical Land Partnership, Ltd. and construct a commercial office building thereon of five stories to become the headquarters and conference center for the Colorado Medical Society ("CMS") and its affiliated entities and to lease the remaining office space to third parties.

**FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Partnership.

2) Units of interest to be sold: Up to 7,600 Units for maximum gross proceeds of \$3,800,000. In addition to using gross proceeds from the sale of Units, the Partnership will obtain additional funds in the form of a mortgage in the amount of approximately \$6,000,000 to finance the proposed building.

**INVESTMENT OBJECTIVES:**

The Partnership's objectives are primarily designed for individual investors and include: (i) to obtain long term appreciation in the value of the building; (ii) to pay 99% of the tax benefits to the Limited Partners; and (iii) to provide Limited Partners with a projected after tax 3 for 1 return of their net investment within 8 years through a mandatory buy-out of this Partnership by CMS.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

## COLORADO MEDICAL SOCIETY

### EXPRESSION OF INTEREST

Based on the summary descriptions of the proposed Limited Partnerships, the EXPRESSION OF INTEREST can be shown, as follows:

A. Land Units of the proposed Colorado Medical Land Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,00] for an Individual Retirement Account) to be sold at \$500 per Unit.

B. Building Units of the proposed Colorado Medical Building Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,000] for an Individual Retirement Account) to be sold at \$500 per Unit.

Units in either the Land or the Building Partnerships, Ltd., can be purchased through 1) Individual Ownership, 2) Trustee (Trust, Pension Plan, Keogh, IRA), 3) Corporation, 4) Custodian or through 5) Rollover of Existing Colorado Medical Society Bond Proceeds.

If you wish to make an EXPRESSION OF INTEREST, please complete the following and return to the Colorado Medical Society, 6825 E. Tennessee Avenue, Building 2, Suite 500, Denver, CO 80224:

These proposed Units would be registered as follows:

If you wish more information, please call (303) 321-8590, Extension 206.

**THIS EXPRESSION OF INTEREST DOES NOT CONSTITUTE AN OFFER TO BUY ANY SECURITY IN ANY JURISDICTION. THIS EXPRESSION OF INTEREST HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY.**

# CALENDAR

Published Jointly by the Colorado Medical Society and the Colorado Foundation for Medical Care □ 6825 East Tennessee, Building 2, Suite 400, Denver, Colorado 80224 □ Tel. (303) 321-8642 x328 □ Prepared Monthly by Charlene N. Montrose

## July

**2-16 CMS Alaskan Cruise/Conference on Legal Medical Issues** — Pacific Waters, departs San Francisco, California on board *TSS Fairsea*. Approved for 24 hours Category 1 credit AMA/PRA. For information contact International Conferences, Suite C, 189 Lodge Ave., Huntington Station, NY 11746. Phone: (516) 549-0869.

**8-15 5th Annual Colorado Pain Symposium: The Surgical Management of Chronic Pain** — Aspen Colorado. 25 hours AMA Category 1 credit. Sponsored by Boulder Memorial Hospital Pain Control Center, Boulder, Colorado and the University of Colorado Health Sciences Center. Contact Richard L. Stieg, MD, the Department of Seminars, Boulder Memorial Hospital, 311 Mapleton Ave., Boulder, Colorado 80302. Phone: (303) 441-0506.

**10-14 Pragmatic Approaches to the Health Care of the Elderly** — Copper Mountain, Colorado. Tuition: \$350 — includes 4 days seminar and 5 nights lodging; \$60 each one day session. *Pre-registration deadline:* June 30, 1983. 20 Contact Hours Colorado Nurses' Association (Agency #381A); 20 Contact Hours AMA Category 1. Contact LeRoy King, Ph.D., Director of Education, Beth Israel Regional Educational Center, 1601 Lowell Blvd., Denver, Colorado 80204. Phone: (303) 825-2190 ext. 457 or 266.

**11 Anemia Workup** — Burlington, Colorado. 2 hours Category 1 and AAFP prescribed credit. Contact: Martin J. Rubinowitz, MD, The Denver Clinic, 701 E. Colfax Ave., Denver, Colorado 80203.

**11-15 Workshops on Financial Planning, Personnel and Financial Management, and Computer Applications and Uses in Medical Practice** — Classes during early morning hours with afternoons free. Seminars to be presented in these resort areas on the dates indicated: Victoria, Canada — July 11-15, 1983; Bermuda — July 18-22, 1983; Hilton Head Island, South Carolina — July 25-29, 1983. Contact Practice Productivity, Inc., 2000 Clearview Ave., Atlanta Georgia 30340. Phone: (toll free 8:30 a.m. to 5:30 p.m. EST) (800) 241-6228; in Georgia — (404) 455-7344.

**11-15 19th Annual Internal Medicine Program** — Estes Park, Colorado. 25 hours AMA Category 1 and AAFP prescribed credit. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone (303) 394-5241.

**12-16 Aspen Summer Skin Seminar** — Given Institute of Pathobiology, Aspen, Colorado. 15 hours credit, AMA Category 1 and AAD. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**14-16 Top Twenty Conference, Family Practice** — Marriott's Mark Resort, Vail, Colorado. 20 hours credit, AMA Category 1 and AAFP prescribed.

Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**18-21 26th Annual Ruidoso Family Practice Seminar** — Inn of the Mountain Gods Mescalero, New Mexico. Sponsored by the New Mexico Academy of Family Physicians. 20 hours credit AMA Category 1 and AAFP prescribed. The inn is located on the Mescalero Apache Indian Reservation, 3 miles from Ruidoso, N.M. — phone: 1-800-545-9011, in New Mexico (505) 257-5141. Contact Brenda Gray, New Mexico Academy of Family Physicians, 6520 Northland Ave., NE, Albuquerque, NM 87109. Phone: (505) 884-7506.

**20-24 Colorado Academy of Family Physicians 1983 Annual Meeting** — Sheraton Inn, Steamboat Springs, Colorado. 17 hours AAFP prescribed credit. Contact Ms. Shirlee Myers, the Colorado Academy of Family Physicians, 3600 S. Logan St., Englewood, Colorado 80110. Phone: (303) 789-5453.

**July 23-Aug 6 3rd Annual Roentgen Revisited** — Munich, Germany. The faculty of the Department of Radiology of the University of California, San Diego Medical Center will be offering a postgraduate course in Germany and Austria. For those who can participate only one week, all of the scientific lectures will be presented in Munich July 27-31. Fee: \$400 and \$300 for fellows and residents. Course will be accredited for Category 1. Contact Mary J. Ryals, San Diego Radiology Research and Education Foundation, PO Box 61203, DFW Airport, TX 75216. Phone: (214) 659-9590.

**23-24 Diagnostic Medical Mycology** — 8:30 a.m. to 5:30 p.m., UCLA Extension, Room 43-105, Center for the Health Sciences. 30 hours credit, Category 1. Fee: \$250 for both days, \$150 for one. Contact Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California 90024. Phone: (213) 825-8421.

**25-28 Practical Gastroenterology for the Internist and Family Physician.** — Given Institute, Aspen, Colorado. 15 hours AMA Category 1 and AAFP prescribed credit. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**25-29 Care of the Diseased and Injured Upper Extremity** — Marriott Mark Hotel, Vail, Colorado. 30 hours credit Category 1. Contact Dr. John A. Boswick, Jr., 4200 East 9th Ave., Box C-309, Denver, Colorado 80262. Phone: (303) 394-8718.

**July 27-Aug 1 Medical Problems of Musicians** — Conference will take place at the Aspen Music Festival. Sponsored by the Aspen Music Festival in Aspen, Colorado. Accredited by the Aspen Valley Hospital for up to 20 hours CME credit. For information and brochure contact Carolyn Reynolds, P.R. Director, Aspen Music Festival, 1860 Broadway #401, New York, NY 10023. Phone: (212) 581-2196.

**July 27-Aug 6** **CME Caribbean Cruise/Conference on Legal Medical Issues** — Caribbean Waters. Departs Fort Lauderdale, Florida on board *TSS Fairwind*. 24 hours Category 1 credit AMA/PRA. Contact Linda J. Wynn, International Conferences, Suite C, 189 Lodge Ave., Huntington Station, NY 11746. Phone: (516) 549-0869.

**July 31-Aug 3** **Rheumatology for the Clinician** — Annual University of California Postgraduate Course with Doctors Ira M. Goldstein and James R. Klineberg — Hyatt Del Monte, Monterey, California. 20 hours credit AMA/CMA Category 1 and AAFP prescribed. Tuition: \$195 for physicians and \$100 for others. Contact Jane Johnson, Office of Continuing Medical Education, School of Medicine, TB 150, University of California at Davis, Davis, California 95616. Phone: (916) 752-0328.

## August

**1-5** **Dynamic Psychotherapy** — Given Institute of Pathobiology, Aspen, Colorado. Time to be announced. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**7-11** **Western Hemisphere Nutrition Congress VII Malnutrition Determinants and Consequences** — Carillon Beach Hotel, Miami Beach, Florida. 20 hours credit in Category 1; 18 elective hours. The American Dietetic Association has approved the program for 20 hours of continuing education credits for registered dietitians. Write to the Western Hemisphere Nutrition Congress VII, American Institute of Nutrition, 9650 Rockville Pike, Bethesda, Maryland 20814.

**8-12** **Current Concepts in Cardiology** — Hyatt Lake Tahoe, Incline Village, Nevada. 20 hours AMA/CMA Category 1 credit. Tuition: \$300 for physicians and \$150 for others. Contact Jane Johnson, the Office of Continuing Medical Education, School of Medicine, University of California at Davis, Davis, California 95616. Phone: (916) 752-0328.

**10-12** **Primary Care of the Back** — Given Institute of Pathobiology, Aspen, Colorado. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**12-16** **9th Annual Primary Care Orthopedics** — Given Institute of Pathobiology, Aspen, Colorado. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**15-18** **26th Annual Pediatric Program** — Stonebridge Inn, Snowmass, Colorado. 20 hours credit AMA Category 1, AAFP and AAPA. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**16-20** **10th Annual Kidney Disease, Hypertension and Disorders of Fluids and Electrolytes** — Given Institute of Pathobiology, Aspen, Colorado. 20 hours AMA Category 1 and AAFP prescribed credit. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: 394-5241.

**18** **The Many Faces of Mono** — Speaker: Martin J. Rubinowitz, MD. 2 hours CMS Category 1 and AAFP prescribed credit. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 East Colfax Ave., Denver, Colorado 80202.

**18-20** **High Country Cardiology Conference: Clinical Decision Making in Management of Heart Disease** — The Westin Hotel, Vail, Colorado. 12 Category 1 hours for physicians, 12 contact hours for nurses. Tuition: \$50.00 for physicians and \$25.00 for nurses. Subjects and moderators: Thursday, August 18, "Valvular Heart Disease," W. Gerald Rainer, MD; Friday, August 19, "Coronary Disease," Joseph Snyder, MD; Saturday, August 20, "Drugs, Pacing, Vascular Disease," Philip Vigoda, MD. *Registration deadline: June 30, 1983.* Contact the Colorado Heart Association, P.O. Box 22066, 4521 E. Virginia Ave., Denver, Colorado 80222.

**19** **Early Breast Cancer Detection/Nutrition and Cancer** — Marriott Hotel, Southeast, Denver, Colorado. Sponsored by the Colorado Division of the American Cancer Society. Registration deadline is August 5, 1983. Contact Midge Cullis, Director of Professional Education, American Cancer Society, Colorado Division, Inc. 1809 East 18th Ave., Denver, Colorado 80218. Phone: (303) 321-2464.

**19-21** **Clinical Management of Coronary Disease and Dual-Mode Exercise Testing** — The Antlers, Colorado Springs, Colorado. Approved by the AMA and AAFP. Contact Mary A. Schroeder, Educational Coordinator, International Medical Education Corporation, 64 Inverness Dr. East, Englewood, Colorado 80112. Phone: (303) 740-8445 or (800) 525-8651.

**Aug 20-Sep 5** **CME Mediterranean Cruise/Conference on Legal-Medical Issues** — Mediterranean waters, departs Venice, Italy on board *MTS Danae*. 24 hours credit Category 1 (AMA/PRA). Contact International Conferences, Suite C, 189 Lodge Ave., Huntington Station, N.Y. 11746. Phone: (516) 549-0869.

**21-26** **New Advances in Internal Medicine: Clinical Applications** — Hyatt Del Monte, Monterey, California. 20 hours credit AMA/CMA Category 1 and AAFP prescribed. Contact Jane Johnson, Publications Representative, the Office of Continuing Medical Education, School of Medicine, TB 150, University of California, Davis, California 95616. Phone: (916) 752-0328.

**Aug 21-Sep 5** **Controversies and Consensus in Obstetrics** — Greek Island Cruise. AMA Category 1 and California & Nevada Boards of Registered Nursing credit. Tuition \$295 for physicians and \$205 for nurses. Contact Synposia Medicus, 2880 Shadelands Drive, Suite 404, Walnut Creek, California 94589. Phone: (415) 935-7889.

**22-26** **Radiology of the Abdomen** Including the Gastrointestinal and Genitourinary Tracts: Emphasis on X-Sectional Imaging, Interventional Radiology and NMR. Credit 25 hours Category 1. The course will be divided into two sections; the first to be presented August 22-25 at the Hotel Del Coronado and San Diego, California and the second, August 25 at the Disneyland Hotel in Anaheim, California. Fee: \$410. Contact Mary J. Ryals, P.O. Box 61203, DFW Airport, Texas 75261. Phone: (214) 659-9590.

**24** **Practical Management of Pain** — Julesburg, Colorado. Speaker: Gerald Battersby, MD. 2 hours credit Colorado Medical Society Category 1 and AAFP prescribed. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 East Colfax Ave., Denver, Colorado 80202.

(Continued from p. 177.)

insurance laws, including a premium tax. Killed by the House Finance Committee.

**SB 292 Jail Health Care Project** (Phelps): Signed by the governor. Statutorily creates the jail health care project. The project sponsored by CMS is now an established part of the Department of Local Affairs and was funded at \$25,000 in the long appropriations bill.

**SB 354 Patient Package Inserts** (Peterson): CMS opposed. The bill which would have required inclusion of patient package inserts with prescription drugs was killed in the Senate HEWI committee.

**SB 395 Authority of the Insurance Commissioner to Promulgate Rules Concerning Prompt Payment of Benefits** (Fowler): Supported by CMS. Passed the Senate but was killed in the House Business Affairs committee. We will be reintroducing this bill or a similar one next year.

#### Several groups of bills or paired bills were considered:

New recognition was sought for lay midwives, respiratory therapists, opticians, and mental health counselors — all failed. Only HB 1336, certifying alcohol and drug abuse counselors — Rep. Herzog (R), Colorado Springs — passed both houses and is awaiting the governor's signature.

Two student loan bills, one for medical students and one for osteopathy students, were killed in the House appropriations committee for lack of dollars to fund them.

Two bills allowing the use of pharmaceutical agents by optometrists were introduced. HB 1322 — Rep. Minahan (R), Colorado Springs — was killed in the Senate HEWI committee; but SB 82 — Senator Beatty (R), Ft. Collins, was amended extensively in both houses and in a conference committee. The optometrists finally have their diagnostic use of drugs, but therapeutic use is forbidden. A patient must be referred to a physician "if he exhibits signs or symptoms of a disease or disorder which the optometrist should reasonably believe may require treatment by an ophthalmologist or other physician."

Several tough drunk driving bills

were introduced, and HB 1287 — Representative Mielke (R), Lakewood — survived. Signed by the governor. It creates a legal presumption that any motorist with a blood alcohol level higher than .15% is drunk and allows officers to confiscate driver's licenses at roadside. CMS supported this bill.

As with the jail health care project, a number of programs have been funded in the long appropriations bill that had never been statutorily created. Bills legitimizing the health departments poison control center, cancer registry, and handicapped

children's programs were all successful.

Three bills creating a presumption under workmen's compensation laws that certain diseases arise out of and in the course of employment were opposed by CMS and killed.

Thank you for all you do in your communities — you're the front line both offensively and defensively. Please keep in touch with your legislators now that they are home. If you have questions about the above information or about how your legislators voted, please let me know.

"Brave New World of Medicine — 1984" is the theme of the Scientific Program of the CMS Annual Meeting. The 113th Annual Meeting of the Colorado Medical Society will take place October 13-15 at Tamarron, near Durango, in beautiful southwest Colorado.

CMS President Merlin G. Otteman, MD, has an "invite" for all CMS members and spouses to attend this exciting meeting (p. 204). For a thought-provoking discussion of some of the major social, economic and ethical issues which will confront the world of medicine, see the article on p. 213 by Arnold Greensher, MD. Dr. Greensher is the chairman of the Scientific Program Planning Committee.

COLORADO MEDICINE (ISSN-0199-7343) is published monthly for \$20.00 per year as the official journal of the Colorado Medical Society, 6825 E. Tennessee Ave., Building 2, Suite 500, Denver, Colorado 80224. Second class postage paid at Denver, Colorado. POSTMASTER: send address changes to COLORADO MEDICINE, 6825 E. Tennessee Ave., Building 2, Suite 500, Denver, Colorado 80224. Address all correspondence relating to subscriptions, advertising or address changes, manuscripts, organizations and other news items relating to the editorial content to the Editorial and Business office.

## Y'All Come to Tamarron

Can you imagine spending three or four days in a beautiful mountain resort in southwestern Colorado in October with the colors changing, the streams low and the fishing good? Can you imagine playing golf on a course that winds up a beautiful mountain canyon yet has all the facilities of a first class golf resort? Can you imagine all this and still be able to attend a medical meeting that should interest all physicians? The topics that will be examined range from hospital staff relationships to environment to alcoholism.

Additionally, there will be a discussion of the aging process (something that affects all of us and our patients) and discussions on medical technology from intensive care nurseries to cardiovascular surgery. Has the emphasis on medical ethics hit your hospital yet? Come learn about how to deal with these sticky problems.

Can you imagine the CMS House of Delegates meeting in better surroundings while tackling some of the current issues in health care such as creation of a hospital medical staff section of the CMS House of

Delegates?

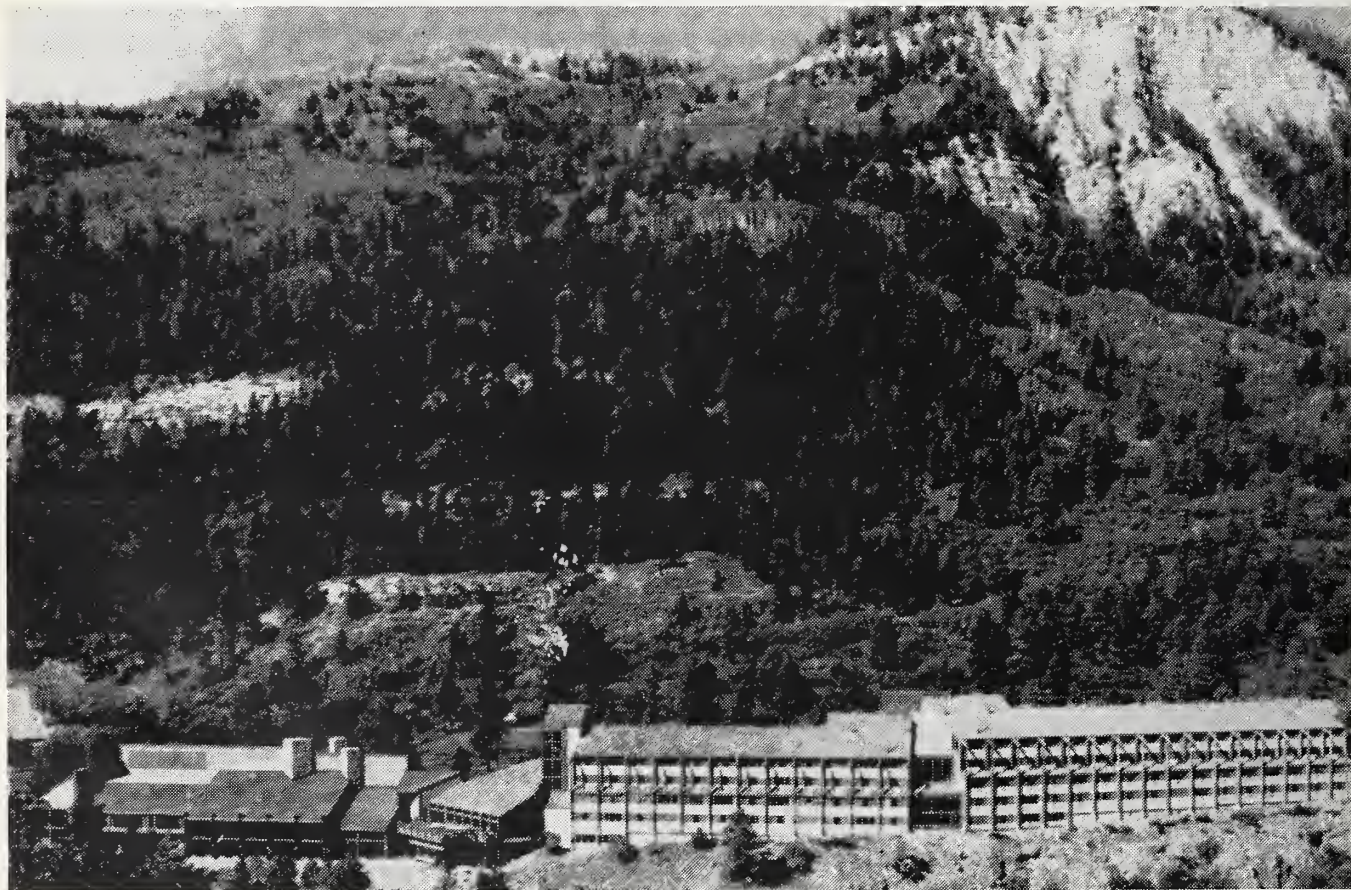

Can you imagine attending the CFMC annual meeting at Tamarron? This will be important as bylaw changes are anticipated, seeking a closer relationship between the Foundation and hospitals.

Can you imagine getting up at 6 a.m. in the morning for a three mile run with the presidents? John Whitsel and I will be leading this group for some good early morning exercise.

Can you imagine attending the CMS-CMSA Presidents' reception and dinner with a Western theme and being entertained by one of southwest Colorado's famous Western jazz bands?

Can you imagine a late afternoon narrow gauge railroad ride through the San Juan Mountains as the sun is setting, having cocktails and hors d'oeuvres on the train, and arriving back in Tamarron in time for another great dinner at the resort?

Well, my friends, if you can imagine any of this, mark your calendar today and make your reservations for the 1983 Annual Session of the Colorado Medical Society and Auxiliary — October 13-15, 1983 at Tamarron.

## you deserve this.

First Interstate Bank  
of Denver's Health  
Care Professionals'

Banking Program specializes in personalized, comprehensive service for those in the field who practice or are in administration. We realize that in banking, like medicine, there's a world of difference between a simple answer and a simplistic one. You need more than a pat response to your banking questions. First Interstate has the people and the resources to provide you with a complete array of financial services, including innovative trust plans, facilities financing and investment programs. And, we offer all these services with personal attention and meetings scheduled for your convenience—at your office or ours.

You'll work directly  
with a professional  
banker who is able to

help you develop a customized financial plan for you or your employees. Our integrated team approach means you'll receive efficient, accurate responses to your questions. In addition, because we're part of a twelve western state banking network, you'll enjoy personal attention and have the resources of First Interstate Bancorp, the eighth largest banking system in the nation, behind you.

To find out how you can benefit from First Interstate's Health Care Professionals' program, contact Shirley Good, Vice President, Health Care Banking Department at 572-1776.

HMSS makes the home  
an alternative to the  
hospital for continuing  
I.V. therapy.

# Home Coming

If maintenance I.V. therapy is the reason for keeping a patient in the hospital, physicians now have the option of directing the services of HMSS. HMSS will administer the physician's prescribed treatment in the comfort, privacy, and convenience of the patient's home. HMSS can administer I.V. antibiotic therapy, chemotherapy, and hyperalimentation (either intravenously or orally). There are two reasons for a physician to recommend the services of HMSS: cost and care.

**Cost.** When compared with receiving the same treatment in a hospital, HMSS can reduce the cost, in

many instances, by as much as 50 percent.

**Care.** It is generally accepted that patients experience a better quality

of life among family, friends, and familiar surroundings. This can be achieved without compromising the quality of care. HMSS Registered Nurses are trained and experienced in patient care and I.V. administration. HMSS nurses work strictly under the attending physician's directions. In addition, all admixtures are prepared by Registered

Pharmacists with experience in centralized hospital intravenous admixture services.

Cost and care. Two compelling reasons for a physician to learn more about HMSS, its services, and its people. We welcome your inquiry.

## Spring Run-off

As the warm spring sun increased the flow of water, so vital to so much of our country, from the snow fields of the Rockies, so spring also began a flow of medical ideas, policies and programs from the annual meeting of the American Medical Association that is vital to the health care delivery system of our nation. I recently spent a week in Chicago (second prize was two weeks in Chicago) attending this meeting and three others related to scientific, social, political and economic problems facing medicine today. I would like to share with you a brief synopsis of these meetings.

The first meeting of the Hospital Medical Staff Section preceded the AMA annual meeting. This section was established by the AMA House of Delegates in 1982 to address the rapidly changing medical issues impacting on hospital medical staffs. As physicians are the final judges in quality of health care and play a major role in the final product which is our health care delivery system, it is imperative that the hospital medical staff be organized, informed and possess a method by which its wishes positively influence the issues affecting hospitals and other health care facilities. The medical staff section will accomplish this by:

1. Strengthening medical staff organizations, leadership and management skills so that they may be more effectively involved in the decision-making process of their institutions.
2. Assuring the hospital medical staff an effective voice for physicians in hospital and other health care facilities by representation in the AMA House of Delegates, state

societies and at the local level of organized medicine.

3. Actively representing the position of the medical staff with hospitals, governing agencies, third party payers, industry and consumers to develop policies supportive of a quality health care system and its physicians.

4. Serving as a forum for the exchange of ideas, concepts and information among members and non-members as well as a resource for consultations, both medical and legal.

The delegates to this first meeting of the medical staff section were concerned with the physician-hospital, administrator-trustee relationship and the movement of hospitals into the multiple corporate mode for medical services, which often places them into direct competition with private physicians and medical staff issues, such as bylaws, peer review and credentialing/hospital privileges. Other specific areas discussed were the employment of physicians by hospitals, contractual relationships and nonphysician providers. The section considered and sent several resolutions regarding these concerns with their representatives to the AMA House of Delegates. Among these was the resolution to establish state medical staff sections, which readily passed the House. We will present a similar resolution to our Colorado House of Delegates for action at the October CMS Annual Meeting.

State officers had the opportunity to meet directly with the members of the Board of Trustees of the AMA, bringing to them a more focused

view of local problems. We discussed several topics, including communications, physicians' image, preventive medicine programs and Federal Trade Commission regulations and their need for change. This is an innovation this year and another method of having your voice heard at a national policy-setting level.

The AMA Annual Session was as colorful as ever and featured a speech by President Reagan. The issues addressed and policies set will be reported to you by your delegates. A proposed resolution to seat the state society president as an alternate state delegate was a positive move to further interlink the policies and activities of the state societies and the national organization.

The final meeting, hosted by the American Hospital Association, was entitled "Physicians and Hospitals: Forging a New Partnership." The general purpose of the meeting was to alert medical staff leadership to the rapidly rising pressures, both economic and political, facing hospitals and physicians in order to anticipate problems resulting from these pressures and to develop cooperative and constructive solutions. Some of the most significant points made were:

- Physicians' and hospitals' income will be reduced in the future, especially to those who do not recognize the changes and adapt to them.
- Hospitals will have to increase their income by getting into the pre- and post-hospital care of patients, thus risking conflict and competition with their own medical staffs.
- A trend is developing for hospitals to consolidate into larger groups in order to have better access to capital, managerial experience and technology, thus maintaining a desirable health care system.
- Prospective payment to hospitals will create review of physician management of patients and, perhaps, an attempt at modification of physician behavior by hospital administrators.
- Medical care may become more standardized, as there has been no convincing evidence that variables in cost/case by physician, region, etc., have any relationship to quality of care.

- Thirty percent of hospital stays and 30 percent of ancillary services are felt to be unnecessary.

- Corporations, by brokering health care for their employees, are beginning to control health care access, payment schedules and where and by whom the patient is treated. (This will alter traditional doctor/patient relationships and the physician's privilege to set his/her own fees.) Health care organizations, as opposed to the individual practitioner, will be better able to meet the needs and demands of these large groups of patients.

- There has been a change from a seller's to a buyer's market. Effective competition requires marketing, promotion and access to technology, which is very difficult for the individual, in contrast to the group, practice. The best solution was thought to be cooperation between hospitals and physicians, sharing risks and leveraging the abilities of each. The alternative of rigid advocacy groups would be counter-productive for both groups.

As you can see, spring brought more than just the snow run-off to Colorado. Medicine is changing rapidly and we should be informed and involved so that any changes that occur have been shaped by the physicians of Colorado and so the final product benefits the people of our state. We will answer this challenge by developing forums, such as the medical staff sections, in the component and state societies in which you may participate, exchange ideas, gather information and thus voice your decisions. National education programs, publications as well as legal advice will be brought to your attention. The "sky" isn't falling but the flash flood warnings are out!

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

- Registered nurses
- Lic. prac. nurses
- Certified nurse aides
- Orderlies
- Home health aides
- Housekeepers
- Companions
- Live-in personnel
- Hosp. private duty

APPROVED FOR MEDICARE • MEDICAID • PRIVATE INSURANCE

**MEYER CARE**<sup>®</sup>  
Health Services

24-hour service, 7 days a week. Since 1967.

3333 S. Bannock St., Englewood, Co. 80110

**762-8444**

Serving the entire Denver area.

## Emergency! First Aid

**Condition:** Lack of interest on the part of local print shops and mail services to the needs of your medical practice.

**Symptoms:** Poor design of your identifying marks, such as letterheads, statement and bill heads, announcements; attitude of private business that every doctor pays whatever the market will bear because all doctors are RICH!

**First Aid Remedy:** Professional staff awaiting your call to design and produce whatever your individual printing needs may be.

Nationally recognized professionals in layout, design, production, publication, to fill your needs... at competitive OR BELOW commercial cost.

For detailed information and a personal consultation, complete the following form and mail immediately to CMS, 6825 East Tennessee, Bldg. 2, Suite 500, Denver, Colorado 80224.

**CMS Member Services is the physician's first aid in private practice needs.**

## President's Planning Session and Leadership Conference—1983

Beaver Run, Breckenridge, Colorado  
June 4, 1983

Nearly one hundred persons participated in the one-day President's Planning Session and Leadership Conference, hosted by John A. Whitesel, MD, President-elect of CMS.

The conference was based on the physician/medical concerns of 1984, specifically: 1) Marketplace Competition, 2) Your Medical Association's Effectiveness, 3) Is Political Effectiveness Necessary, and 4) Problems and Opportunities in Hospital/Medical Staff Relations. Experts in each of the areas addressed the seminar and participated in the workshops which followed.

Dr. Whitesel, in commenting on the session, said goals and objectives of CMS from previous years were still valid; however, he would work toward implementation of specific programs within the society to meet

needs pointed up by the seminar and workshops. Dr. Whitesel listed the following programs for the 1983-84 society year:

- Formation of a hospital medical staff section.
- Establishment of a membership committee to work on member recruitment and retention for CMS.
- Establishment of a CMS long range planning committee to better pinpoint future directions and efforts of the society.
- Development of a CMS non-dues revenue policy.

Reviewing the comments and assessments made by participating physicians at the meeting, Dr. Whitesel said he thought these four specific program objectives in 1983-84 would answer the majority of the concerns voiced during the workshops. He added that emphasis placed on areas of competition in the marketplace, hospital/medical staff relations, political effectiveness and organizational effectiveness were valid concerns and many were being addressed by councils and

committees. Organizational effectiveness is one such area in which staff has already begun to incorporate the planning session's recommendations, e.g., strengthening the CMS liaison with specialty societies, developing a policy manual which can be supplied to each component society, and identifying and expanding CMS member services.

Establishment of a membership committee to work toward recruitment and retention will strengthen the society as well as the financial base. Through the formation of a hospital medical staff section, Dr. Whitesel said, CMS will place more emphasis on working with the hospital administrations, business coalitions, insurance industry and labor to contain costs but maintain quality of care. An effort will be made to develop a unified program of medical staff/component society/specialty society relations. Dr. Whitesel added that matters of marketplace competition will also be addressed with help from component societies to develop an information resource to aid physician members in understanding all competitive models, modes of practice, and to suggest solutions.

A long range planning committee will allow anticipation of future goals and problems (through positive action instead of reaction). Efforts to move to a non-dues financial base will be intensified in order to gain greater flexibility of society programs and services to the citizens of Colorado.

Those attending the conference felt it was productive and that direction was given to society programs for 1983-84

### Grievance of the Month

Mr. S. wrote a detailed complaint about his father's treatment by Dr. X. and Dr. Y. The complaint outlined the father's impotency problem and treatment. The patient had seen a family practice physician, Dr. X., who had referred the patient to Dr. Y., a urologist. Dr. Y. suggested surgery and the patient agreed. The patient entered the hospital, was prepped and then the surgery was cancelled because the patient was found to have a low level of potassium.

The patient and his family were unaware of the reason for cancellation until the following day. Medication to increase the patient's potassium level was prescribed and surgery was rescheduled for the next month. The hospital called the patient and told him surgery was rescheduled for a specific date the next month.

When the patient called Dr. X.

to confirm this date, Dr. X. told him to call Dr. Y. The patient could not reach Dr. Y. When Dr. Y. finally contacted the patient, Dr. Y. told him he could not operate until the patient's potassium level was higher.

The patient and his family were very frustrated in their attempts to find out if his potassium levels were adequate for surgery. Mr. S. and his father were upset with the lack of communication among the hospital, the laboratory, and Dr. X. and Dr. Y.

The local grievance committee checked with Drs. X. and Y., and the hospital, and found that deferring the patient's surgery was appropriate but that communication was inadequate and caused considerable inconvenience to the patient.

The committee recommended that Dr. X. and Y. increase their communications among physicians, laboratories, hospitals and patients so that patients are comfortable with their medical care.

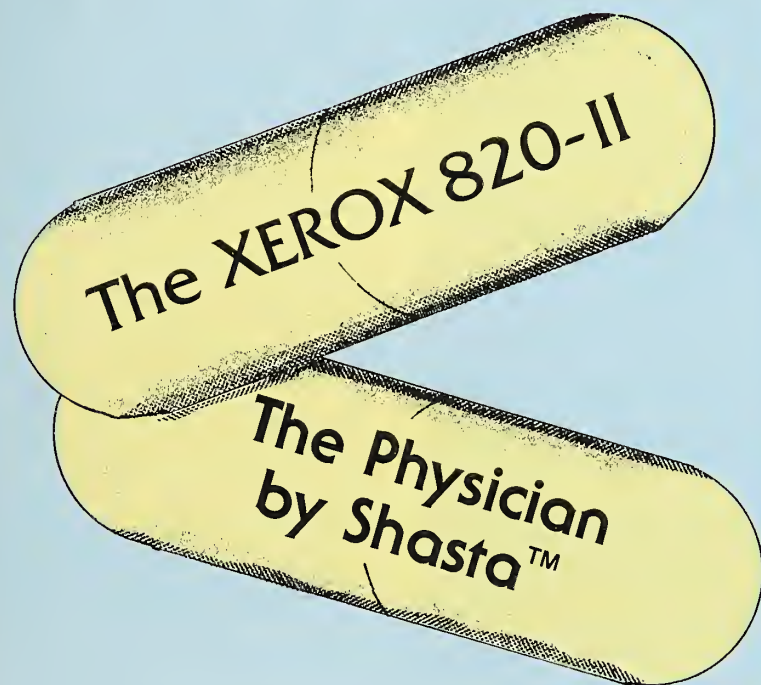

### U.S. Immigration Service Seeks CMS Assistance

A bill currently progressing through the United States Congress—the Immigration Reform Act, or Simpson-Mazzoli bill—will allow a significant number of currently illegal aliens to become permanent citizens.

As part of the process of obtaining citizenship, each person must pass a medical examination. The Denver office of the Immigration Service in-

# Give yourself an **ANALGESIC** and take two of the best:

**Fast and effective pain relief for  
the office management headache!**

indicates that currently about 200-300 individuals are processed each month. Passage of the Simpson-Mazzoli bill is likely to increase the number of persons in need of medical examinations to several thousand per month. The pool of physicians available to provide such examinations is currently too small to handle the dramatic increase anticipated, and Immigration is seeking additional physicians to perform the required physical exams.

The examination fee allowed is \$50.00, and is payable by the patient prior to the exam.

Physicians who are willing to assist in providing the examinations should contact Mr. Hardin, Deputy District Director of the United States Immigration and Naturalization Service, at 837-4801. The Immigration Service needs some indication of the number of physicians who would be available as soon as possible.

## **USAF Personnel Reliability Program Requests Help of Colorado Physicians**

Every day throughout Colorado and the rest of the United States, active duty Air Force personnel are seen by private sector non-military physicians, dentists and other health care specialists. Some of the patients who are examined and/or treated participate in the Personnel Reliability Program (PRP). These service men and women perform work that carries a greater than average burden of responsibility. The Personnel Reliability Program (governed under Air Force regulation 35-99, dated May 6, 1983) is designed to ensure that all personnel who perform duties with nuclear weapons, nuclear weapons systems or critical components meet the highest possible standards of individual reliability.

The Air Force requests that active duty Air Force members who are treated by private physicians be questioned as to whether they are on PRP. If the patient is unconscious, the Air Force asks that

## **olorado Medical Computers**

the physician or one of his/her staff contact the serviceman's base, squadron or the PRP monitor in the Patient Affairs Office of the nearest Air Force Medical Treatment Facility. In the Colorado-Wyoming area, active duty Air Force personnel may be based at Lowry Air Force Base, Denver; Buckley Air National Guard Base, Denver; Peterson Air Force Base, Colorado Springs;

NORAD, Colorado Springs; the Air Force Academy, Colorado Springs or F.E. Warren Air Force Base, Cheyenne, Wyoming. The Air Force also requests that when contacting the active duty member's squadron or hospital/clinic, the physician give the patient's or her complete name, rank and social security number. This information can be found on the patient's Air

Force identification card (Air Force Form 2AF), usually located in a billfold or purse.

Physicians or other health care providers are encouraged to look for any signs of emotional instability, alcohol/drug abuse or medical condition that could cause a sudden loss of consciousness or require treatment with narcotics, sedatives or tranquilizers. The Air Force does not request notification for other categories of drugs such as antihistamines unless their use will significantly affect the physical or mental abilities of the individual. Whenever a physician has doubts he is asked to notify the patient's unit.

In summary, if an active duty Air Force member is treated by a private health care provider and he suspects that the patient's reliability might be impaired because of illness, injury or medical, dental or psychiatric treatment, the Air Force asks that he notify the patient's squadron. In Denver, questions on the medical and administrative aspects of the Personnel Reliability Program can be referred to the PRP monitor in Patient Affairs at Lowry Air Force Base. The telephone number of that office is (303) 370-4027. Questions about similar Army or Navy programs can be directed to the nearest Army or Navy installation.

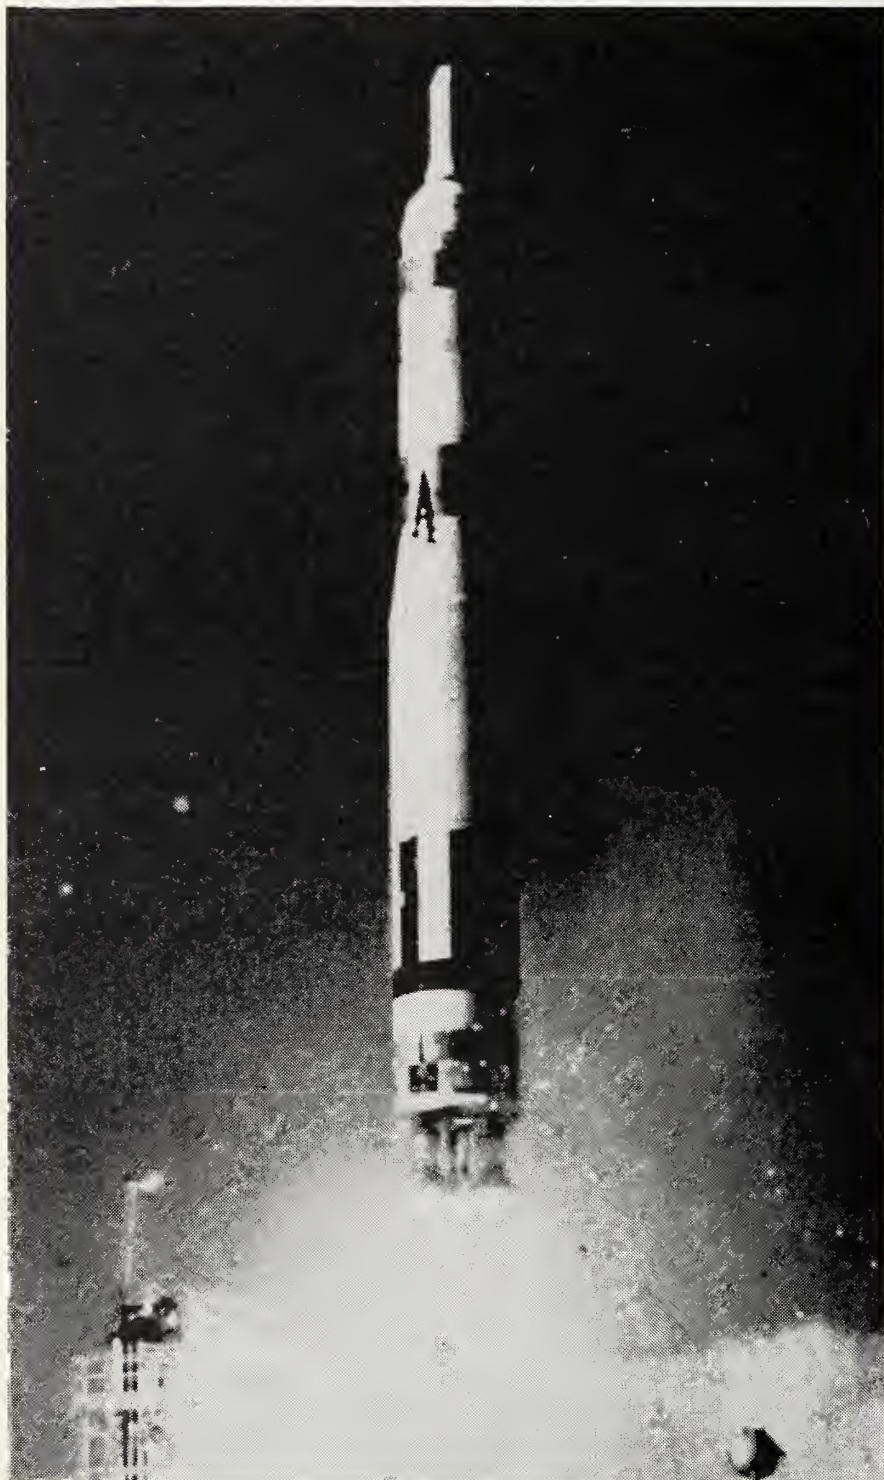

### **March Grievance a "Grievance" — Again**

To the Editor:

Regarding the "Grievance of the Month," March issue:

This grievance is an outstanding example of what is wrong with the practice of some of our fellow (I cringe) "physicians." If this grievance were received at our clinic I'd see both the indicated refund and the physician involved out the door that very day. The committee should have been more forceful and supportive of this patient's position. What logical patient requests a general physical 200 miles from her regular personal physician?

Thomas J. Allen, MD

In *A Tale of Two Cities*, Charles Dickens describes both the time of the French Revolution and our own time when he says "It was the best of times; it was the worst of times."

Our concept of what is "best" is colored by our perception of the meaning of the term, our present status, the community in which we live, and perhaps most of all by the dreams and desires we have. Most physicians spend many hours involved in the problems and needs of their patients. A self-winding clock within us generates a constant underlying insecurity, a need to know more, and a desire to have covered everything.

Coupled with this insecurity is a feeling of being personally responsible when things go wrong. If we retrace our steps to when we began medical school we find ourselves a highly-motivated, compulsive, intense group of individuals who were very positive about our futures and "the way things ought to be." For many of us, medical school was a rude awakening. We were exposed to a new and often rigid set of standards which required that we develop new means of coping. Sometimes in this vulnerable period of our development we were exposed to role models at the university that were not always the models of whom we had dreamt. Major doubts and disillusionment began to creep into the fabric of our lives.

Often added to this scenario was the omniscient head nurse who thought we didn't know what we were doing. (Sometimes, no doubt, this judgment was correct.) The most difficult struggle was to gain self-confidence in dealing with patients. Our first confrontations with death, too, left us feeling inadequate and discouraged.

Somehow, in our training, each morning always brought enough energy to rejuvenate our batteries. We just learned to adjust to the strange new world we inhabited for four years of medical school. Part of this adjustment was facilitated by learning to develop a myriad of coping mechanisms. Some of these coping mechanisms served us well, permitting us to survive in an often hostile climate. However, some of our coping behaviors developed then may interfere with our ability to change now. Remember the word

## Futurism in Medicine — "Apocalypse Now" or "Brave New World?"

by Arnold Greensher, MD.

---

***Dr. Greensher is Director of Medical Education at Penrose Hospital in Colorado Springs and is the Chairman of the Planning Committee for the 1983 Scientific Program.***

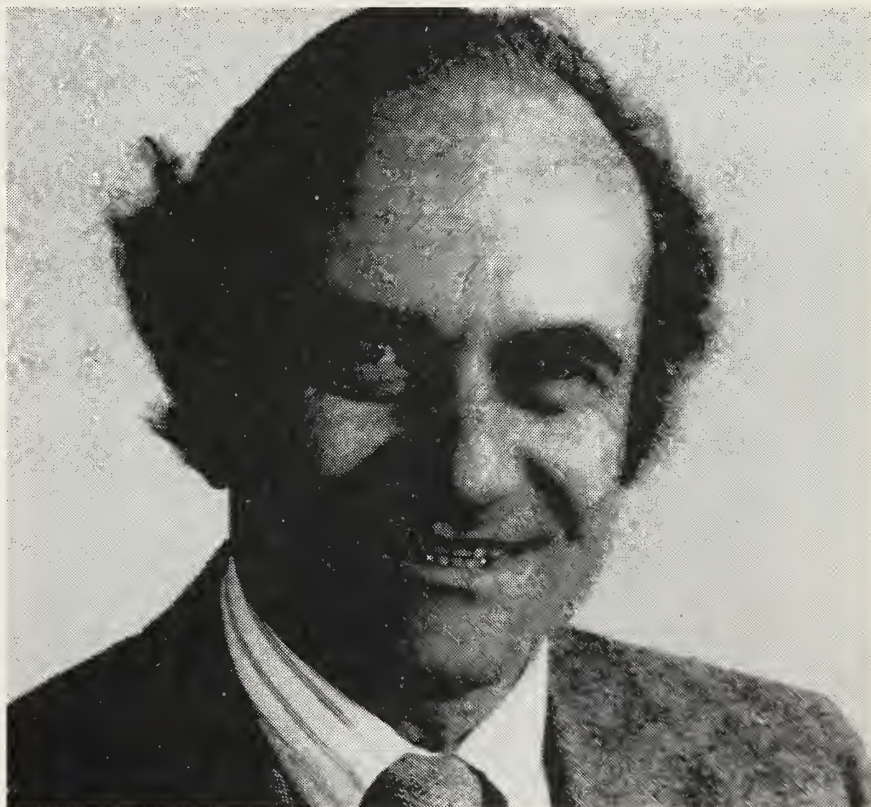

---

change; we will return to it repeatedly in the remainder of this article.

Futurism and change may, indeed, be synonymous. Fortunately, not all of our medical school experience was negative — there were many bright, even enlightening moments. Some of our mentors have their personal characteristics etched in our souls as we try to emulate them. Not all of our ideals were lost as we struggled through several years of residency and then into the uncertainties of opening a practice and facing our first

honest-to-goodness "own" patient.

Now we are told by outsiders who dream of mechanization and bottom lines on computer print-outs that physicians are part of a "cottage industry." Suddenly we are told it is time to "change." We are informed that we are "too costly, time-inefficient, unregulated, unpredictable, unavailable, and non-caring," to list but a few of the many adjectives and "expletives deleted" by which we have been described. Suddenly we are faced not only by change but also by a loss of control

over the care of our patients, how we practice, and our financial futures.

Alvin Toffler's "Third Wave" of futurism has caught up with us and I am not quite sure that this is all good, but there is no doubt that we are caught up in the maelstrom of change. Just as we previously learned to cope during medical school and our later training, we again need to find the energy and means of dealing with this change rather than futilely attacking it.

In the mid-1900s small cottage industries disappeared because they refused to unite and face the

challenge of "Big Business." The same threat of big business looms on the horizon for medicine. Perhaps this more than any other force should shake our very foundations and cause us to join together to plan the future of medicine. The corporate world has not had a history of representing the individual. With this in mind, I hope that physicians will coordinate their efforts and continue to represent the patient.

It is quite difficult, however, to determine how we will weather the storm of change and who will lead us. Currently, we have two potential

leaders: the medical society and the hospitals in which we practice. They should forge a partnership which will assist the medical profession to manage the changes that are occurring. Our history of treating the hospital as a necessary but "illegitimate child" and the medical society as "nuisance mail" must, of necessity, end. Team work must become the hallmark of the future.

Instead of using traditional confrontational tactics in dealing with our colleagues, and as colleagues I include nurses and administrators, we will need to use new techniques and organizational dynamics. Change is, indeed, upon us but the means of survival is in our hands.

### **A Change in Office Practice**

As much as we dislike the word "change," we are faced with an inevitable set of circumstances. Such change includes ever-increasing overhead in solo and small group practice; increased cost of space, personnel, equipment and supplies and consumer demands that we be accessible and function in pleasant surroundings. All of this is occurring in an era of shrinking resources. The conflicting demands of cost containment and the desires of consumers are difficult to reconcile. Physicians will need to develop new strategies to deal with these changes.

In the future it will not be uncommon for us to see further development of condominium-type office facilities that share common resources such as the following:

- computerized central appointment systems
- computerized phone systems
- centralized reception and waiting areas
- shared temporary employee pools
- shared computerized data collection and billing services
- shared centralized purchasing
- unified employee benefit plans
- practice management assistance

I could go on with futurist dreams, but in reality they are no longer futurist. HMOs are already doing many of these things. Centralized physician office buildings owned and managed by hospitals are another example of a step in this direction. We now see hospitals building and operating self-standing emergency and same-day surgery centers. Emergicare centers operated by private practicing physicians and

Durango, Colorado 81301

(Please circle #10 on Reader Service Card)

hospitals are in reality ambulatory care facilities that meet a special need of certain consumer groups, just as the fast-food industry does. It is painful to think of us in analogy with the fast food industry. As much as we may dislike this analogy, however, many consumers do not desire long term care or any long term relationship with a physician. We are indeed a nation on the move, with few ties that bind.

#### Issues of the 80s

Again, it is important to recognize that the major issue of our time is the issue of change. The major issues of change in our professional and personal environment are:

- The emergence of the consumer as a major force in healthcare decision making. (The "Three Cs" of healthcare in the 80s are consumers, competition and cost containment)
- A change in our traditional concept of the interaction between the medical staff and hospital administration.
- The changing population, whose average age is progressively increasing ("Who will take care of Grandma?")
- A young generation in a search for "meaning and happiness" — testing the borders of their reality with alcohol and drugs
- A planet that is increasingly polluting itself to oblivion. Even the substances we work with may be killing us. If the substances do not get to us, then the stress and high production demands of a technological society may increase the amount of psycho-emotional disease that we see in our society.
- A high technology culture — "everything can be done with a machine;" "the best is worth it;" and "we all are entitled to the best." (Somehow we must begin to re-evaluate the priorities of our society.)
- Changes in traditional family structure and life.

#### Change: Is It Really Beyond Our Ultimate Control?

In 1900, 80 percent of hospital space was bed space; now it is less than 20 percent. Instead, a vast array of other services has taken over: conference rooms, labs, libraries, administration, social services, teaching facilities, etc. In 1900 the average life span of the populace was 47 years; now it has stretched beyond 70. Our hospital beds used to be full; now we

are fortunate to have occupancy rates beyond 60 percent. In the past, the individual was the "consumer" in healthcare. Now we find industries and unions acting as purchasers and evaluators of health care for their workers and members.

Physicians, too, now have altered their practice styles with the formation of PPOs, HMOs and IPAs in an effort to meet the challenge of change — or what we now call competition.

The federal government has decided to take an active role in deciding who will or who will not "pull the

plug" in the ethical dilemmas facing all of the healthcare providers working in the hospital.

Prospective reimbursement in the form of DRGs is upon us and will certainly change our patterns of care and practice.

I could go on with a long list of changes, ad infinitum, but that would serve no further purpose. Instead, let me invite you to attend the Scientific Program in October. I think you will find it both a challenge to your thinking and extremely helpful as we confront the great changes that lie ahead — indeed, that are upon us now.

# Application Software: What A Small Office Computer Can Do

---

**Ed. Note: Remember Charles Dickens' *A Christmas Carol*? Ebenezer Scrooge employed a clerk named Bob Cratchett. The story depicted Bob spending his day toiling over columns of numbers — manually.**

**The introduction of the mechanical adding machine revolutionized the methods of handling paperwork, as did the typewriter, the copy machine and scores of other innovations. What exciting change, to be relieved of tedious chores of calculating and transcribing!**

**Looking back, it was inevitable that these appliances would become as prevalent as they are. They improved productivity and provided a simpler method of accomplishing a task, as well as improving circumstances for the worker. Today, we use these devices without thinking twice. Then, as now, productivity was vital to profitability. That is why CMS has chosen to go to an outside editorial source for information concerning the latest innovation: the office computer system. The author, Sherri Bruhn, is a computer systems consultant who has had considerable experience in medical and physician applications of the office computer. This is the second in her series of articles.**

---

In the last article in the June issue of *Colorado Medicine*, we defined a computer as a programmable electronic device that can store, retrieve and process data; a tool that may be used to automate three of the four steps involved in processing paperwork. If all your employees have to do is gather the data and enter it into the computer, what improvement could you expect to see in their productivity?

At what point does it become as foolish not to use a computer as it is not to use a calculator? The question facing physicians today is not "Should I computerize my practice?" but "When should I computerize my practice?"

The only time it makes good business sense to continue using outdated methods is when the new methods are not yet cost-effective. The answer, then, is to computerize your practice when it becomes cost-effective to do so.

But how do you go about deciding if a computer is a cost-effective alternative in a medical practice? What can you expect the computer to

accomplish?

To review some pertinent terminology briefly, software is the term used to describe the intangible elements of a computer system; the data and instructions which are electronically or magnetically recorded in the computer's memory.

Software is required to "teach" the computer what to do. The software that teaches the computer about its environment (how to operate the system) is called operating system software.

The most critical component of a computer is the software that teaches it to do something useful, or application software. What can application software teach a computer to do? That depends both on the skill of the author of the software (the programmer) and the computer's peripherals.

With peripherals such as a data storage device, a CRT and a printer, along with appropriate software, the computer is capable of storing, retrieving, processing and printing data. Let's explore how the capabilities of such a system may be applied to the medical practice.

One of the major functions of the front office staff is patient billing: keeping track of who receives the physician's services, what the patient is to be charged for those services and trying to ensure that the patient pays for those services within a reasonable length of time.

These procedures are simple enough, yet the front office employees spend the majority of their time processing patient billing. How can the computer be applied? First, the computer must be made aware of the information required to process patient billing. This involves creating "files," typed on the keyboard, which are stored in the computer's external memory — most often a hard disk or floppy disk.

A computer file is a collection of related information, comparable to a filing cabinet holding patient folders. Computer files are made up of "records," like an individual patient folder. Finally, each record is divided into "fields." A field is a single piece of information; for example, a name or zip code.

These files will contain information about patients (name, address, phone number, etc.), procedures offered by the doctor (code, description, and pricing) and diagnoses (codes and descriptions). If there is more than one provider in the practice, the computer will also require a provider file with information about each physician.

When a patient receives services from the physician, the patient's record is accessed by typing or "entering" the account number (or name, depending on the software) on the keyboard. The patient information will be displayed on the terminal to verify that the record is indeed the correct record; then the procedure code or codes and diagnosis code are entered.

As each code is entered, the computer will display the appropriate description to allow verification. Since the pricing is part of the procedure file, the operator need make no entry unless the standard requires adjustment.

From this point, all processing is done by the computer. The patient balance is updated and an insurance form and statement can be printed at the operator's request.

The insurance form and statement, however, are only the tip of the

iceberg when it comes to the paperwork based on the services provided a patient.

What about a daily summary of procedures? The computer already "knows" the information; all that is left to be done is to compile the report and print it. This, too, is done at the request of the operator.

The information which is used to prepare the daily summary may be presented in a variety of formats; a monthly summary for your accountant or perhaps a detailed report of each provider's productivity and profitability. The possibilities are virtually endless.

By entering the payments received from a particular patient and/or insurance company, the computer can report on the current status of the account. This information may then be compiled to print accounts receivable aging and insurance claim aging reports.

The computer won't complain if you ask it to search the patient files and prepare a list of all the accounts with a balance more than 60 days past due. This allows your staff to make phone calls for collections instead of preparing the list of patients to call.

When a new patient visits the practice, the information about that patient is added to the patient file. The computer will make a "note" of this in the new patient file and will even remember the source of the referral. The system can then print letters to new patients and "referrals." As with reporting, the possible uses of the computer for word processing are unlimited.

Do you make use of a reminder system in your practice? This is another area in which the computer can be helpful. Instead of making list after list of patients to receive postcards or phone calls next month or next year, the secretary can enter that information into the computer's memory. Every month, the computer will prepare a report listing all patients who are due for an appointment, or even actually prepare the postcards. Again, your staff is more productive contacting patients or scheduling appointments than spending the time in paperwork preparing the list.

Did you ever ask your staff to find the file for "what's his name" who had "such and such" a diagnosis?

The average practice sees literally hundreds of patients each month. How long does it take your secretary to sift through all those files to find a particular patient record by diagnosis? The computer places this information at your fingertips; just request a list of all patients with that particular diagnosis. The ability to compile statistical information based on treatment, diagnostic and demographic criteria is an added bonus.

You now have an idea of how a computer can be applied to the paperwork in a medical practice. It's

certainly obvious that the computer will drastically improve the productivity of your staff by reducing the time spent in routine paperwork. In fact, improved productivity is the most direct method of justifying the expense of a system.

The next article will discuss how to determine whether a computer is a cost-effective alternative in your practice.

**The 60 seconds you take to read this message from Dean Witter could be your most profitable 60 seconds this year.**

In the face of fluctuating interest rates, budget deficits, inflation, deflation, changing tax laws and the uncertain economy, it's important that you maximize the potential of your investment capital.

Managed Futures Accounts at **Dean Witter** can help. They offer:

- Positive performance potential in either bull or bear markets
- Professional money management system with documented track records
- Maximum tax on profits of 32 percent
- Day-to-day liquidity

**Consistent Performance**

The key element in a managed futures account is the trading advisor's ability to perform consistently. **Dean Witter** has carefully constructed a roster of Commodity Trading Advisors (CTAs) who have demonstrated just that ability. (Note: Past performance does not guarantee future results.)

# An added complication... in the treatment of bacterial bronchitis\*

**Brief Summary:** Consult the package literature for prescribing information.

**Indications and Usage:** Cefclor® (cefadroxil, Lilly) is indicated in the treatment of the following infections when caused by susceptible strains of the designated microorganisms:

Lower respiratory infections, including pneumonia caused by *Streptococcus pneumoniae* (group A beta-hemolytic streptococci), *Haemophilus influenzae*, and *S. pyogenes* (group A beta-hemolytic streptococci).

Appropriate culture and susceptibility studies should be performed to determine susceptibility of the causative organism to Cefclor.

**Contraindications:** Cefclor is contraindicated in patients with known allergy to the cephalosporin group of antibiotics.

**Warnings:** IN PENICILLIN-SENSITIVE PATIENTS. CEPHALOSPORIN ANTIBIOTICS SHOULD BE ADMINISTERED CAUTIOUSLY. THERE IS CLINICAL AND LABORATORY EVIDENCE OF PARTIAL CROSS-ALLERGENICITY OF THE PENICILLINS AND THE CEPHALOSPORINS AND THERE ARE INSTANCES IN WHICH PATIENTS HAVE HAD REACTIONS, INCLUDING ANAPHYLAXIS, TO BOTH DRUG CLASSES.

Antibiotics, including Cefclor, should be administered cautiously to any patient who has demonstrated some form of allergy, particularly to drugs.

Pseudomembranous colitis has been reported with virtually all broad-spectrum antibiotics (including macrolides, semisynthetic penicillins, and cephalosporins); therefore, it is important to consider its diagnosis in patients who develop diarrhea in association with the use of antibiotics. Such colitis may range in severity from mild to life-threatening.

Treatment with broad-spectrum antibiotics alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is one primary cause of antibiotic-associated colitis.

Mild cases of pseudomembranous colitis usually respond to drug discontinuance alone. In moderate to severe cases, management should include sigmoidoscopy, appropriate bacteriologic studies, and fluid, electrolyte, and protein supplementation. When the colitis does not improve after the drug has been discontinued, or when it is severe, oral vancomycin is the drug of choice for antibiotic-associated pseudomembranous colitis produced by *C. difficile*. Other causes of colitis should be ruled out.

**Precautions:** General Precautions—If an allergic reaction to Cefclor occurs, the drug should be discontinued, and, if necessary, the patient should be treated with appropriate agents, e.g., pressor amines, antihistamines, or corticosteroids.

Prolonged use of Cefclor may result in the overgrowth of nonsusceptible organisms. Careful observation of the patient is essential. If superinfection occurs during therapy, appropriate measures should be taken.

Positive direct Coombs' tests have been reported during treatment with the cephalosporin antibiotics. In hematologic studies or in transfusion cross-matching procedures when anti-globulin tests are performed on the minor side or in Coombs' testing of newborns, whose mothers have received cephalosporin antibiotics before parturition, it should be recognized that a positive Coombs' test may be due to the drug.

Cefclor should be administered with caution in the presence of markedly impaired renal function. Under such conditions, careful clinical observation and laboratory studies should be made because safe dosage may be lower than that usually recommended.

As a result of administration of Cefclor, a false positive reaction for glucose in the urine may occur. This has been observed with Benedict's and Fehling's solutions and also with Clinitest® tablets but not with Tes-Tape® (Glucose Enzymatic Test Strip, USP, Lilly).

Broad-spectrum antibiotics should be prescribed with caution in individuals with a history of gastrointestinal disease, particularly colitis.

**Usage in Pregnancy—Pregnancy Category B—**Reproduction studies have been performed in mice and rats at doses up to 12 times the human dose and in ferrets, given three times the maximum human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Cefclor. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

**Nursing Mothers—**Small amounts of Cefclor have been detected in mother's milk following administration of single 500-mg doses. Average levels were 0.18, 0.20, 0.21, and 0.16 mg/ml at two, three, four, and five hours respectively. Trace amounts were detected at one hour. The effect on nursing infants is not known. Caution should be exercised when Cefclor® (cefadroxil, Lilly) is administered to a nursing woman.

**Usage in Children—**Safety and effectiveness of this product for use in infants less than one month of age have not been established.

**Adverse Reactions:** Adverse effects considered related to therapy with Cefclor are uncommon and are listed below.

Gastrointestinal symptoms occur in about 2.5 percent of patients and include diarrhea (1 in 70).

Symptoms of pseudomembranous colitis may appear either during or after antibiotic treatment. Nausea and vomiting have been reported rarely.

Hypersensitivity reactions have been reported in about 1.5 percent of patients and include morbilliform eruptions (1 in 100), pruritus, urticaria, and positive Coombs' tests each occur in less than 1 in 200 patients. Cases of serum sickness-like reactions (erythema multiforme or the above skin manifestations accompanied by arthritis/arthralgia and, frequently, fever) have been reported. These reactions are apparently due to hypersensitivity and have usually occurred during or following a second course of therapy with Cefclor. Such reactions have been reported more frequently in children than in adults. Signs and symptoms usually occur a few days after initiation of the drug and subside within a few days after cessation of therapy. No serious sequelae have been reported. Antihistamines and corticosteroids appear to enhance resolution of the syndrome. Cases of anaphylaxis have been reported, half of which have occurred in patients with a history of penicillin allergy.

Other effects considered related to therapy included eosinophilia (1 in 50 patients) and genital pruritus or vaginitis (less than 1 in 100 patients).

**Causal Relationship Uncertain—**Transient abnormalities in clinical laboratory test results have been reported. Although they were of uncertain etiology, they are listed below to serve as alerting information for the physician.

Hepatic—Slight elevations of SGOT, SGPT, or alkaline phosphatase values (1 in 40).

Hematopoietic—Transient fluctuations in leukocyte count, predominantly lymphocytosis, occurring in infants and young children (1 in 40).

Renal—Slight elevations in BUN or serum creatinine (less than 1 in 500) or abnormal urinalysis (less than 1 in 200).

(061782R)

**Some ampicillin-resistant strains of *Haemophilus influenzae*—a recognized complication of bacterial bronchitis\*—are sensitive to treatment with Cefclor.<sup>1-6</sup>**

In clinical trials, patients with bacterial bronchitis due to susceptible strains of *Streptococcus pneumoniae*, *H. influenzae*, *S. pyogenes* (group A beta-hemolytic streptococci), or multiple organisms achieved a satisfactory clinical response with Cefclor.<sup>7</sup>

# Leonard Freeman

*by James J. Delaney, Jr., MD*

The Civil War and one of Colorado's best known surgeons came into existence almost at the same time. Leonard Freeman, the only child of physician parents, was born in Cincinnati, Ohio, December 16, 1860. What influence the war had

on his future is unknown. However, a strong family tradition of physicians (several aunts and uncles were also physicians) left him little choice for any other undertaking.

He had a more extensive education than did most young men of his

time. After public schooling in Cincinnati, he was graduated from the University of Cincinnati with a BS degree in 1882. He received an MD degree in 1886 from the Medical College of Ohio, a proprietary school. He then spent a year as an intern at the Cincinnati General Hospital. Today we would consider such an education standard preparation for the practice of medicine. However, in the latter part of the 19th century most people interested in medicine received their MD degree by attending two years of lectures following the completion of high school. They could thus set up practice by the time they were 20 or 21 years old.

Following his internship, Dr. Freeman went to Europe as a preceptee. This too was a tradition for anyone who aspired to excellence in medicine at the time. He spent three years studying in Germany and Vienna where he was exposed to the teachings of the father of scientific pathology, Virchow. He became friends with most of the prominent physicians of the world during his time there—friendships that were nurtured throughout his life.

In 1890 he returned home, set up a practice, and quickly became a prominent member of the community. Dr. Freeman was appointed a member of the faculty of his alma mater and soon married. His first child died at birth and Dr. Freeman apparently developed a pulmonary hemorrhage at about the same time. To recuperate he sailed from the west coast to Hawaii where he, visited Father Damien's famous leper colony before returning home.

His activities between the Hawaii Cruise and his move to Denver are not known. He arrived in Denver in 1894 and rapidly established himself as a prominent member of the profession. He became professor of surgery at the Gross Medical College. His reason for moving to Denver is not known. His son speculates that he stopped in Denver during his train trip to the west coast and liked it so well he moved here once his health recovered. At any rate, he became the dominant surgeon in Denver during the first third of this century. He became head of surgery in all three of the major medical schools and retained that position when all

three merged with the University of Colorado.

Dr. Freeman was a man of tremendous energy. He traveled overseas frequently and was one of only 50 members of the International Surgical Society. He was interested in birds and archeology and collected extensive specimens which have been donated to the University of Colorado Museum. His many friends came to Colorado to travel with him. They made frequent trips by automobile to Taos, Santa Fe, and Mesa Verde.

The Mayo brothers and other prominent members of their clinic were frequent summer visitors to the Freeman house. They would ship their cars to Denver for their use while vacationing here. A mechanic would usually accompany the cars. (There was a strict hierarchy of preference for automobiles at the Mayo Clinic. The senior physicians drove Packards and Pierce-Arrows, the sub-chiefs drove Cadillacs and the junior physicians drove Buicks or lesser cars.)

As is true of most busy, prominent men, Leonard Freeman was a man of strict discipline and habits. He had surgical services at all the major hospitals in town but did most of his surgery at St. Joseph's. The staff at St. Joseph's was closed at the time as were many other staffs. There were two operating rooms. He reserved one room three mornings a week. After surgery he would go home for lunch, after which he would read professional material for one hour (he subscribed to most major domestic and foreign medical journals and he could speak or read several languages). After his reading hour, he would conduct office hours until early evening.

In addition to consulting at several other hospitals, he conducted the clinics and the teaching at the medical school. He always had one or more "assistants" to help him meet this strenuous schedule.

He had three children that survived infancy. Frank (his wife's maiden name) was born in 1896, Paul in 1900, and Leonard in 1902. His wife died from a complication of mastoiditis in 1904. He remarried sometime later. Frank entered medical school at the University of Michigan but left school to fight in World War I. After the war he stayed in London for a year where he

became interested in engineering. After returning home, he enrolled at C.U. and graduated from Engineering School. Most of his work was in the areas of reclamation.

Paul died from pneumonia in about 1920. Leonard, feeling the pressure of family tradition, chose medicine and followed in his father's footsteps. After an internship in Minnesota, he took a fellowship at the Mayo Clinic. After his father's death, he tried to assume all his father's responsibilities. He entered the service of his country in World War II and became Chief of Surgery at the Borden General Hospital in Chickashoy, Oklahoma. This was a 1200 bed hospital with almost no patients, a tribute to pork barrel politics.

After the war, Leonard Jr. felt he had to upgrade his skills so he arranged to take a postgraduate course in Philadelphia. Before completing the course, he became ill, passed out, fell against a radiator and suffered a severe skull fracture. The resultant trauma left him with a seizure disorder which resulted in a dislocated left shoulder and the need to take anti-convulsant medication. He also suffered a frac-

tured thorax and pneumothorax. His shoulder dislocation was never properly repaired. Unable to complete his postgraduate course, crippled by his shoulder problem, and plagued by an acquired seizure disorder, he decided to retire from practice. The Freeman medical legacy had come to an end.

Leonard Sr. died on December 27, 1935 after suffering a severe myocardial infarction. In the fall he had attended the year's meeting of the International Surgical Society at the Mayo Clinic. Shortly after returning to Denver he was honored by his colleagues for 50 years of medical service to the community. His health had begun to fail a few years earlier, but with the help of his wife, his assistant Dr. Cheeley, and his son Leonard, he had been able to continue to meet all his responsibilities. Dr. Freeman had suffered a herpetic infection of his left eye which was recurrent and undoubtedly painful. During these attacks, his wife read to him daily so that he could keep up on the literature.

His death was mourned by his friends and colleagues around the world. He is buried in Fairmount Cemetery.

# Drug Therapy Questions & Answers

outside the metro area in Colorado for specific answers to any drug therapy questions, including adverse drug reactions, drug interactions, drug therapy of choice, investigational drugs, drug use in pregnancy, drug dosing in renal and hepatic failure and drug identification. The center is open from 8:00 a.m. to 5:00 p.m. Monday through Friday with 24 hour on-call service.

The director of the center is Dennis R. Sawyer, Pharm.D., Assistant Professor of Medicine, University of Colorado Health Sciences Center. Medical director is Earl Sutherland, MD, Ph.D, Assistant Professor of Medicine, UCHSC. The article on cimetidine-sucralfate interaction was written by Susan C. Smolinske, BS, R.Ph.; the article on allergic reactions to local anesthetics was written by Kaye L. Rathmann, BS, R.Ph.

## CIMETIDINE-SUCRALFATE INTERACTION

### Request:

A 55 year old woman with recurrent duodenal ulcers was placed on a combination of sucralfate and cimetidine. Are there any data to suggest synergistic effects or interactions between these two drugs?

### Response:

There are no controlled trials in human patients to support or refute the concomitant use of cimetidine and sucralfate, although such trials are now in progress. In vitro tests have shown that the addition of hydrochloric acid to sucralfate results in the formation of a gel at a pH of 3.5 or less, which was formerly thought to be important for the therapeutic efficacy of sucralfate (Nagashima & Yoshida, 1979). Theoretically cimetidine, which produces a mean gastric pH of 4.0 at a dose of 600 mg QID (Peterson et al, 1979), could reduce formation of sucralfate gel and subsequently decrease its efficacy. Several studies have been undertaken to clarify this issue (Giesing et al, 1981; Steiner et al, 1982; Lacz, 1983).

Giesing et al (1981) studied the in vitro binding of sucralfate to albumin at a pH of 4.0. The amount of sucralfate binding increased as the amount of available protein increased. These authors then studied the in vivo binding of sucralfate to rat mucosal

ulcerations induced by acetic acid before and after administration of aluminum-magnesium hydroxide gel 3 ml/kg. Sucralfate adhered to ulcerated gastric and duodenal mucosa and was not affected by the antacid administration.

Two studies have looked at the binding of sucralfate in combination with cimetidine in animal models. Steiner et al (1982) found that the administration of cimetidine 10 mg/kg one hour prior to sucralfate did not affect sucralfate binding to ulcerated rat gastrointestinal mucosa. Similarly, Lutz (1983) administered larger doses of cimetidine (25 and 250 mg/kg) to rats, which achieved a mean gastric pH of 3.0. Again, the binding of sucralfate to experimentally-induced ulcers was not affected.

Another concern is that sucralfate may reduce bioavailability of cimetidine when ingested simultaneously. This has been observed to occur, but delaying the administration of cimetidine for two hours restores bioavailability to normal (Pers Comm, 1983).

### Conclusion:

There are no controlled trials at this time which demonstrate additive or synergistic effects with concurrent use of cimetidine and sucralfate. Preliminary animal data indicate that cimetidine does not affect the binding of sucralfate to ulcer sites and gel formation does not appear to be necessary for ulcer binding to occur. A combination of agents with different mechanisms of action may provide additional benefits in patients who do not respond to cimetidine or sucralfate alone. Due to the added expense and patient compliance factors, initial therapy with this combination is not advisable until further studies can demonstrate additive benefit. If the drugs are used concurrently, cimetidine should be given two hours after a dose of sucralfate.

## ALLERGIC REACTIONS TO LOCAL ANESTHETICS

### Request:

A patient requiring local dental anesthesia gave a history of several

previous "allergic" reactions to lidocaine. What anesthetic would be least likely to cause a reaction? Is skin testing appropriate?

### Response:

True hypersensitivity to local anesthetics is rare and accounts for less than 1% of all reported adverse reactions (Adriani & Zepernick, 1981; Bennett, 1974; Arora & Aldrete, 1976). Most untoward effects allegedly ascribed as allergic reactions may be attributed to other factors such as acute toxicity, psychomotor reactions, the pharmacologic properties of the local anesthetics, or concurrent drug therapy (3.g. epinephrine) (Johnson & DeStigter, 1983; Giovannitti, 1981).

### Local Anesthetics without methylparaben

(Pers Comm, 1983, 1983a, 1983b)

lidocaine*	All single dose vials, ampules, or 1.8 ml dental cartridges of Xylocaine® (Astra)
prilocaine*	Citanest® 4% plain Citanest Forte® 4% w/epi 1:200,000
mepivacaine	Carboncaine® 3% (Cooke-Waite) Carbocaine 2% with Neo-Cobefrin® (Cooke-Waite)
procaine	Novocaine® 1% (Breon) Novocaine® 2% (Breon)
bupivacaine	Marcaine® 0.25% w/epi 1:200,000 50 ml amps Marcaine® 0.50% w/epi 1:200,000 30 ml amps Marcaine® 0.75% w/epi 1:200,000 30 ml amps

\*list of ingredients should be checked on the container since older products containing methylparaben may still be on the market.

### Adverse Reactions Attributed to Local Anesthetics

(Lederman et al, 1980; Adriani & Zepernick, 1981; Giovannitti, 1981)

#### Nonallergic symptoms

agitation, disorientation, nausea, apprehension, tremors, convulsions, lethargy, respiratory depression, myocardial depression, hypotension  
syncope, tachycardia

tachycardia, palpitations, diaphoresis, apprehension, nervousness, pallor, hypertension, headache, nausea

#### Allergic symptoms

inflammation, burning, edema, erythematous macules, papules  
exudation, crusting  
severe hypotension, bronchospasm  
dyspnea, asthma, general urticaria, laryngeal and/or pharyngeal edema  
redness, edema, induration, hemorrhage or necrosis of the skin

#### Comment

inadvertent intravascular injection of local anesthetic

psychomotor reactions  
secondary to patient  
apprehension

toxic reaction to epinephrine  
used concomitantly with local  
anesthetics

#### Comment

contact dermatitis (Type IV);  
most frequent allergic  
reaction

anaphylaxis (Type I); rare,  
but life-threatening

local Arthus reaction (Type 1)

Table 1

Esters	Amides
benzocaine	lidocaine
procaine	mepivacaine
tetracaine	prilocaine
chloroprocaine	bupivacaine
propoxycaine	phenocaine dibucaine etidocaine

High plasma levels of the local anesthetic can occur secondary to inadvertent intravascular injection and produce a toxic reaction that is dose-related. Manifestations may include transient CNS excitation (agitation, disorientation, nausea, apprehension, slurred speech, tremors, convulsions) followed by CNS depression (lethargy, respiratory depression), myocardial depression and hypotension (Authement & Adrian, 1962; Giovannitti, 1981; Adrian & Zepernick, 1981). Psychomotor reactions (e.g. loss of consciousness, tachycardia) are a frequent occurrence in anxious or apprehensive patients because of an increased vasovagal activity and elevated levels of endogenous catecholamines (Campbell et al, 1977; Johnson & DeStigter, 1983). The increased catecholamine level may also increase the sensitivity of the patients to epinephrine, which is commonly used concurrently with local anesthetics to increase their duration of action (Giovannitti, 1981).

Allergic reactions have been reported primarily with local

anesthetics that have a para-aminobenzoic (PABA) ester type structure (Table 1) (Gilman et al, 1980; Johnson & DeStigter, 1983). Methylparaben, a bacteriostatic agent used in many of the local anesthetic solutions (ester and amide agents) may also be a source of the hypersensitivity reactions since it is structurally similar to PABA (Nagel et al, 1977; Anon, 1973). Cross-sensitivity among members of the ester group and structurally-related compounds (paraben preservatives) has been documented (Aldrete & Johnson, 1969; Lederman et al, 1980). Therefore, many manufacturers have reformulated their products in the last several years to eliminate the methylparaben preservatives (Table II). Hypersensitivity to the amide group of local anesthetics alone is rare but can occur (Giovannitti, 1981; Wellins, 1969; Waldman & Binkly, 1977; Adriani & Zepernick, 1981; Arora & Aldrete, 1976).

Approximately 80-90 percent of the allergic reactions associated with local anesthetics are local, cell-mediated (sensitized lymphocyte-type IV), hypersensitivity reactions characterized by inflammation, burning, edema, erythematous macules, papules, exudation and crusting of the skin (Adriani & Zepernick, 1981). Atopic patients, those with inherent sensitivity to foods, inhalants and other substances, are at an increased risk of developing allergic reactions to local anesthetics (Adriani & Zepernick, 1981). An immediate IgE mediated anaphylactic reaction, which can be life-threatening, occurs very infrequently with these drugs. In patients previously exposed to local anesthetics, the systemic anaphylactic reaction, identified by urticaria, rhinitis, circulatory collapse, bronchospasm, asthma and laryngeal, glottic and pharyngeal edema, may develop during or immediately following subsequent exposure to the sensitizing agent and is the result of an immediate release of massive quantities of histamine. When it occurs, aggressive and prompt treatment with epinephrine and general supportive care (e.g. respiratory ventilation, fluids) is required (Giovannitti, 1981; Adriani & Zepernick, 1981).

Skin testing for allergy to local anesthetics has definite limitations.

In a highly reactive patient, an acute, possibly fatal, anaphylactic reaction may be precipitated (Adriani & Zepernick, 1981). A high incidence of false positive responses has been reported with intradermal testing. These have been attributed to a localized release of histamine, trauma of the injection, distention of the tissues or the irritative effect of undiluted solutions (Aldrete & Johnson, 1970; Incaudo et al, 1978; Aldrete & Johnson, 1969).

In a study by Aldrete & Johnson (1969), 25 of 60 patients with no previous history of hypersensitivity to local anesthetics had a positive skin reaction to the ester group. Incaudo et al (1978) report five positive skin reactions in 71 patients with suspected hypersensitivity to local anesthetics. All five reacted uneventfully to anesthetics of the opposite chemical group and three of the five were able to tolerate the anesthetic agent in which they had previously a positive response.

Patch testing is only useful in identifying delayed hypersensitivity and is not of value in detecting systemic sensitivity to IgE antibodies that mediate anaphylactic reactions (Adriani & Zepernick, 1981). If skin testing is utilized, it should be performed in a controlled environment with necessary resuscitative equipment and drugs. DeShazo & Nelson (1979) suggest testing with increasing concentrations of the test solution(s) before clinically challenging the patient. Patients should be tested with local anesthetics without methylparaben and with the preservative separately (Giovannitti, 1981). Several authors remark that a negative response indicates that the patient can probably receive the local anesthetic in question safely (Arora & Aldrete, 1976; Aldrete & Johnson, 1976; Fisher & Pennington, 1982).

### Conclusion

True allergic reactions to local anesthetics are rare and generally involve the ester-type agents and structurally-related compounds (paraben preservatives). The majority of alleged "allergic" reactions may be attributed to toxicity, psychomotor reactions, the pharmacologic properties of local anesthetics and reactions to concomitant drug therapy. Cell-

mediated reactions account for approximately 80 to 90 percent of the allergic reactions; however, systemic anaphylactic reactions can occur.

### Recommendations

1. Allergic reactions can usually be avoided by giving the amide type of local anesthetic (without preservative) to patients with a history of allergy to ester compounds.

2. In patients with suspected hypersensitivity to the amides, the reaction may be due to the methylparaben (if present) or the local anesthetic. In these patients, skin testing may be of value. However, it will not detect possible systemic sensitivity. Intradermal skin tests have a high incidence of false positive reactions and may produce an anaphylactic reaction in highly sensitive patients. A negative response is a better predictor that the drug in question can be given safely.

**\$2,600,000 maximum September 1, 1983**

**COLORADO MEDICAL LAND PARTNERSHIP, LTD.**

5,200 Units of Limited Partnership Interests — \$500 Per Unit  
Minimum Investment: Five Units (\$2,500); or  
Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

Acquire 10.0 acres of land from the Colorado Medical Society ("CMS"), sell approximately 5.0 acres ("East Tract") for a substantial return of funds to investors and to lease the remaining 5.0 acres ("West Tract") to the Colorado Medical Building Partnership, Ltd. with the sale of the West Tract to CMS to occur within 5-10 years.

**FINANCING:**

- 1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Land Partnership.
- 2) Units of Interest to be sold: Up to 5,200 Units for maximum gross proceeds of \$2,600,000.

**INVESTMENT OBJECTIVES:**

The Land Partnership's objectives are primarily designed for pension and profit sharing programs and include: (i) to share the appreciation of the equity of the East and West Tracts, which appreciation will be realized upon the sale of such Tracts; (ii) to provide the Limited Partners with cash distributions generated through lease payments commencing approximately August 1, 1983; (iii) to provide the Limited Partners with a substantial return of funds upon the sale of the East Tract for a minimum of \$1,400,000 guaranteed by CMS; any cash in excess of \$1,400,000 will be allocated 75% to the Limited Partners and 25% to the General Partners; (iv) to obtain long-term appreciation in the West Tract of not less than \$1,500,000, guaranteed by CMS, with the sale to occur within 5-10 years; and (v) to provide Limited Partners with an increased projected after tax annual return upon the sale of the East Tract.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

**FOR INFORMATION PURPOSES ONLY**

**SUMMARY OF OFFERING**

**\$3,800,000 maximum September 1, 1983**

**COLORADO MEDICAL BUILDING PARTNERSHIP, LTD.**

7,600 Units of Limited Partnership Interests — \$500 Per Unit

Minimum Investment: Five Units (\$2,500); or

Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

To lease approximately 5.0 acres of land from the Colorado Medical Land Partnership, Ltd. and construct a commercial office building thereon of five stories to become the headquarters and conference center for the Colorado Medical Society ("CMS") and its affiliated entities and to lease the remaining office space to third parties.

**FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Partnership.

2) Units of interest to be sold: Up to 7,600 Units for maximum gross proceeds of \$3,800,000. In addition to using gross proceeds from the sale of Units, the Partnership will obtain additional funds in the form of a mortgage in the amount of approximately \$6,000,000 to finance the proposed building.

**INVESTMENT OBJECTIVES:**

The Partnership's objectives are primarily designed for individual investors and include: (i) to obtain long term appreciation in the value of the building; (ii) to pay 99% of the tax benefits to the Limited Partners; and (iii) to provide Limited Partners with a projected after tax 3 for 1 return of their net investment within 8 years through a mandatory buy-out of this Partnership by CMS.

**For further information, call:**

**321-8590, ext. 206  
Colorado Medical Society**

**EXPRESSION OF INTEREST**

Based on the summary descriptions of the proposed Limited Partnerships, the EXPRESSION OF INTEREST can be shown, as follows:

A. Land Units of the proposed Colorado Medical Land Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,000] for an individual Retirement Account) to be sold at \$500 per Unit.

B. Building Units of the proposed Colorado Medical Building Partnership, Ltd., (minimum investment of Five Units [\$2,500] or Four Units [\$2,000] for an Individual Retirement Account) to be sold at \$500 per Unit.

Units in either the Land or the Building Partnerships, Ltd., can be purchased through 1) Individual Ownership, 2) Trustee (Trust, Pension Plan, Keogh, IRA), 3) Corporation, 4) Custodian or through 5) Rollover of Existing Colorado Medical Society Bond Proceeds.

If you wish to make an EXPRESSION OF INTEREST, please complete the following and return to the Colorado Medical Society, 6825 E. Tennessee Avenue, Building 2, Suite 500, Denver, CO 80224:

These proposed Units would be registered as follows:

## Getting Organized Medicine Together

The legislative and regulatory assaults of the last 20 years have forced organized medicine into different modes. Specialty societies have responded to forces impacting their specialties. Hospital staff organizations have changed in relation to changes in health care delivery systems in their areas. State legislatures have taken on a new importance under the block grant system of federal payments. Under this system, the state decides which

programs will receive what proportions of the total federal monies granted. This system heightens competition among various medical groups.

State regulatory agencies also have expanded their activities, creating new tensions and dangers for medicine. Limited-license practitioners have come into being in many specialty areas. The new economics has spawned DRGs and PPOs, each impinging selectively on

different groups within medicine. This is how pressures drive wedges between the various specialties and also between groups determined by practice sites, e.g. hospital-based or office-based practitioners. It would appear that medicine is a house divided and a house ineffective. If medicine is to respond at its best to these challenges, it will have to speak with a unified voice.

The Colorado Medical Society is the logical focal point for unifying our activities. As the largest, most organized and visible medical group in the state, it commands the most attention from legislators. Specialty societies can maximize their effectiveness with the legislature if they form a natural alliance with the Colorado Medical Society.

**It would appear that medicine is a house divided and a house ineffective.**

This is not a one-way street. The state medical society must also seek special expertise from the appropriate specialty society when testifying before the legislature on specialty issues.

Through all of this, another organized group in medicine is emerging. This is the hospital medical staff. Generally the practicing physician has most loyalty to his hospital staff. The hospital is where he or she practices and makes his living and where changes most affect him and his livelihood. The AMA recently recognized the importance of the hospital staff and has created a special section in the AMA structure dealing with hospital staff relations. The Colorado Medical Society also is currently attempting to create a hospital staff section within its structure. You will be hearing more about this in the near future, as it is developed.

Certainly this drawing together of all of organized medicine in Colorado under the umbrella of the Colorado Medical Society will benefit the physicians of Colorado. This increased communication and consultation can only enhance our effect upon those with whom we deal.

## AMA Annual Meeting

The 132nd annual meeting of the AMA House of Delegates convened July 19, 1983 in Chicago. The 351 delegates representing the state associations, 61 specialty organizations, public health and armed services, the Veterans Administration, medical schools, hospital staffs, residents and medical students con-

sidered, discussed and debated a wide variety of issues and topics.

For many, the highlight of the meeting was the appearance of President Ronald Reagan, who enjoyed an enthusiastic reception. The new AMA president, Dr. Frank J. Jirka emphasized the current challenges to our profession. These challenges are characterized by social and economic changes

related to the delivery of quality medical and health care and methods of reimbursement for such services.

While the news media focused on a few items such as AIDS and the dioxin controversy, the House adopted resolutions to support further study of these problems, while cautioning against the dissemination of possible erroneous information.

Few topics in recent years have stimulated so much emotion and discussion as the proposed revised guidelines of the JCAH. Testimony was decidedly one-sided. The mandate to the JCAH was clear that the term "medical staff" should not be replaced by "organized staff," and that care of patients should remain under the supervision and direction of fully-licensed physicians.

## Ronald Reagan highlighted the AMA Annual Meeting.

As directed by the CMS House of Delegates, your CMS delegation introduced a resolution stipulating that "physician" be defined as "Doctor of Medicine" (MD) and "Doctor of Osteopathy" (DO) only. A modification of our resolution incorporating two other similar resolutions was adopted, and pertains to use of the term "physician" by governmental agencies as well as the JCAH. The JCAH is scheduled to meet in August to revise the Accreditation Manual for Hospitals. It is anticipated that they will seriously consider the various recommendations from the AMA House of Delegates.

Progress reports were received concerning DRGs, HMOs, IPAs and PPOs, as well as non-alphabetical items such as the increasing cost of medical education and the Health Policy Agenda for the American people.

Along with Drs. Platt and Takahashi, I urge you to keep informed about the many issues facing us individually and collectively, through such publications as the AMA News and other periodicals, and to convey your opinions to us so that we may effectively represent your views and sentiments.

## The Board of Medical Examiners: Information and Issues

On the 14th of July, 1983, I had the opportunity to present some of your concerns to the Board of Medical Examiners...confidentiality, time limits of due process, increase in license fees and several others. I was cordially received and your issues were thoughtfully considered. I have subsequently met with Mr. Michael Vitek, Chairman of the Board, who is equally concerned with communication and positive recommendations. As an outcome of that meeting, I bring to you information and constructive approaches to the present and future issues that concern you and the Board of Medical Examiners.

As **background**, the Board of Medical Examiners has its authority from (Statute No.) CRS12-36-101-(135). Under the legislative declaration, its charge is: "The general assembly declares it to be in the interests of public health, safety and welfare to enact laws regulating and controlling the practice of the healing arts to the end that the people shall be properly protected against unauthorized, unqualified and improper practice of the healing arts in this state, and this article shall be construed in conformity with this declaration of purpose." The board is composed of 11 members, one of whom is chairman. It functions to assure the public that the medical care that they receive in Colorado adheres to the standards of medical practice prescribed by law. Members of the board are Michael Vitek, Delta, hospital administrator; John

Carroll, Boulder, attorney; Nelson Mohler, DO, Denver, general practitioner; Ray Piper, DO, Denver, general practitioner; Robert Lederer, MD, Denver, pediatrician; Henry Fieger, MD, Denver, neurosurgeon; Frederick R. Paquette, Denver, radiologist/oncologist; Jack Klapper, MD, Denver, radiologist; Bruce Wilson, MD, Durango, internist; Christine Peterson, MD, Grand Junction, internist/oncologist; Stephen Kozloff, MD, Greeley, obstetrician/gynecologist.

The recent **increase in license fees** was an effort to change from a one-year licensing program to a two-year renewal. The additional fee also helped to decrease the backlog of cases by increasing legal services.

The **statistical survey** mailed with your last license renewal was useful data for public service, e.g. indigent care, etc. It was strictly voluntary and in the future will be so designated. Input from Colorado Medical Society and others will be obtained prior to further mailings.

**Mailings from the Board** improperly addressed can be corrected by calling the Board Secretary at 866-2468. Appropriate marking of the address section on the renewal application will help avoid misdirection of your mailings from the board.

**Time limits of due process** of cases brought before the Board of Medical Examiners has been of concern to them also. They are presently considering innovative methods to reduce the length of these procedures. Your recommendations will be welcome and thoroughly considered.

The **confidentiality of board cases** is maintained through the inquiry stage; when the case has been deter-

mined to warrant processing, it is referred to the Attorney General's office for review. The case becomes public record only when the A.G.'s office decides a case should be pursued and thus files for a hearing date. Mr. Vitek suggested that a rebuttal stage should be introduced into this process prior to sending a case to the Attorney General's office.

There is a need for **legislative change** in several areas. These areas are narcotic inventory and reporting of impaired physicians or unprofessional conduct. We need to comply with the law, but avoid unnecessary paperwork and facilitate a quick and painless return to productive practice of these physicians. We can pursue these areas and others through our legislative efforts and our lobbyists. The Board of Medical Examiners is receptive to commenting on and assisting these efforts within their legal limits and their charge.

Continued **communication** is valuable. The board is planning to report on its activities and progress to the annual meeting of the Colorado Medical Society. Mr. Vitek has also suggested a meeting at six-month intervals of the board members of CMS and the Board of Medical Examiners for interchange of ideas and solution of programs, to facilitate the medical examiners' charge to medicine and the people of Colorado. This meeting will be an important step to achieve that goal.

The recent meetings with the Board of Medical Examiners and Mr. Vitek have been quite productive, but for even greater progress your ideas and suggestions are solicited. Please send them to me at the Medical Society office.

H.R. Safford, III, MD, Chairman  
Lorraine Koehn, COMPAC staff assistant

## The Federal Election Commission

**Editor's Note:** Former Associate Director of the American Medical Association Political Action Committee (AMPAC), Lee Ann Elliott, is now a Federal Election Commissioner and will be joining CMS physicians at the Annual Meeting in Tamarron as speaker at the COMPAC luncheon. Following is some background information on the Federal Election Commission.

### What is the Federal Election Commission?

- ✓ The FEC was established as a result of the passage of the 1974 Federal Election Campaign Act Amendments.
- ✓ In 1976 the Supreme Court ruled

that the manner in which its six voting commissioners were appointed was unconstitutional (Two each were appointed by the President, the President pro tempore of the Senate and the Speaker of the House.)

- ✓ In 1976 the FECA 1971/'74 was further amended to provide for Presidential appointment of all six voting commissioners.
- ✓ The FEC was created specifically to administer federal election law including:
  - allocation/distribution of public funds for presidential primary campaigns, nominating conventions and presidential election campaigns as provided for by the Revenue Act of 1971 and the 1974 FECA amendments

**Join COMPAC today!**  
For more information, call  
**321-8590.**

- registration of political action committees and regulation of their activities according to federal election law
- reporting of campaign funding sources and expenditures as a matter of public record
- investigating allegations of federal campaign law violations
- issuing rules and regulations for implementing federal election law
- issuing rulings (advisory opinions) in response to requests/complaints.
- ✓ Some of the areas in which FEC regulations and rulings have had considerable impact on PACS are:
  - establishment of multiple affiliate PACS
  - contribution solicitation procedures
  - definition of independent expenditures.

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

## The Accreditation Process in Continuing Medical Education

Continuing Medical Education (CME) has long been widely recognized as an important dimension of the overall practice of medicine, a means by which physicians can keep up to date on major developments in medical practice and research.

In this article, we are going to take a look at a significant aspect of CME: the accreditation of CME programs and the role that CMS plays in this process in Colorado. Although what follows is more an overview than a detailed scrutiny, it is hoped that the reader will gain some useful insights into the why and wherefore of accreditation from both philosophical and practical standpoints.

### Background

The AMA House of Delegates in 1979 adopted the following definition of CME: "Continuing medical education is composed of any education or training which serves to maintain, develop, or increase the knowledge, interpretive and reasoning proficiencies, applicable technical skills, professional performance standards or ability for interpersonal relationships that a physician uses to provide the services needed by patients or the public."<sup>1</sup> With this definition, the AMA... "...recognizes that all continuing educational activities which assist physicians in carrying out their professional responsibilities more effectively and efficiently are CME."<sup>2</sup>

Since the professional responsibilities of physicians can vary widely (practicing physician, administrator, professor, etc.), the definition must always be applied to an individual

case before determining whether the definition has been met, keeping in mind that extra-curricular or strictly personal interest kinds of continuing education activities undertaken by physicians (e.g., personal financial planning, art classes, etc.), should never qualify as CME.

### Physicians' Recognition Award

Having an accepted general definition of CME becomes important in the context of the Physician's Recognition Award (PRA), a program established by the AMA in 1968 "...to encourage physician participation in continuing medical education and to recognize physicians who have voluntarily completed individual programs of continuing medical education."<sup>3</sup> Although the PRA is a voluntary program, the medical profession considers it of great significance for fostering excellence and demonstrating this to the public; eleven states with CME requirements for relicensure accept the PRA in their fulfillment, and members of several other medical organizations have CME reciprocity agreements with the AMA.

A physician must complete 150 hours of CME during a consecutive three year period to qualify for the PRA, and at least 60 of these hours must be in what is called "Category I" CME. (We won't deal with the other five categories here, but they are all well explained in the 1983 PRA Information Booklet.) Since the basic Information Booklet definition of Category I CME is "CME activities so designated by an Accredited Sponsor,"<sup>4</sup> it is easy to see the importance of accreditation in the overall CME picture.

To meet the requirements for Category I CME an activity must be sponsored or co-sponsored by an accredited organization which in turn has designated one or more hours of Category I credit for the activity. The Accreditation Council for Continuing Medical Education (ACCME) is the organization which, directly or by delegation, accredits CME sponsors so that they can designate Category I credit for their CME activities. Formed in 1981 the ACCME, which has historical precedents in two prior organizations,\* is an independent body which "...conducts a voluntary accreditation program for organizations/institutions providing CME."<sup>5</sup>

Because of the standards with which an organization/institution must comply before accreditation is granted by the ACCME, the overall quality of CME is greatly enhanced by this voluntary process. A physician considering participation in a CME event designated Category I by an accredited sponsor will know, in general, that the event has met or exceeded eight key criteria:

1. it conforms to the AMA definition of continuing medical education,
2. it is based on perceived or demonstrated educational need,
3. it is intended to meet the continuing medical education needs of an individual physician or a specific group of physicians,
4. the educational objectives for the activity are stated,
5. the content is appropriate for the specified objectives,
6. the teaching/learning methodologies and techniques are suitable for the objectives and format of the activity,
7. evaluation mechanisms are de-

# Is there a doctor on the road or at the game?

fined to assess the quality of the activity and its relevance to the stated needs and objectives, and 8. there is documentation of physicians' participation by the sponsoring institution/organization.<sup>6</sup>

## Accrediting CME Sponsors

The job of the ACCME is to ensure that only organizations and institutions which have demonstrated capability of sponsoring programs which meet these criteria are accredited for CME. ACCME itself directly accredits only state medical societies and schools of medicine, as well as certain organizations/institutions whose CME activities typically serve audiences beyond bordering states and/or whose membership draws from four or more states. Direct ACCME accreditation is often referred to as "national" accreditation. CME accreditation of organizations within a state or locality, such as hospitals, larger clinics, and various other organizations, is conducted by the state medical society which in turn follows ACCME guidelines and directions in carrying out this significant responsibility. ACCME conducts periodic reviews of intra-state CME accrediting organizations, such as CMS, to monitor and recommend changes or improvements in the accreditation process used by those bodies. In addition, ACCME regularly monitors the organizations it directly accredits.

## CMS: An Accredited Organization and An Accrediting Authority

CMS recently received direct "national" accreditation from the ACCME. Having successfully undergone the accreditation process, we can now designate our own CME events, such as the Scientific Program at our Annual Meetings, for Category I CME credit. CMS can also designate such credit for CME events we co-sponsor with other organizations or institutions. The CMS CME Committee, composed of members of various CMS Councils, has the task of ensuring that an event meets the eight criteria for Category I CME before designating CME credit for it. ACCME accreditation of CMS is a recent development which opens the door to many exciting possibilities which will be considered in a future article. Let us now turn to the other aspect of accreditation and a responsibility which CMS has had for some

time: our role as the accrediting authority for CME providers within the state.

#### ACCME "Essentials"

Since 1976 CMS has accredited 35 hospitals and 10 other organizations as Category I CME providers. The accreditation process is under the jurisdiction of the Committee on Accreditation composed of representatives from six specialty societies: Family Practice, Internal Medicine, Ob-Gyn, Pediatrics, Psychiatry, and Surgery. Functioning through this committee, the society conducts first-time on-site surveys of CME programs of providers seeking accreditation and periodic on-site reviews of those programs each time the accreditation comes up for renewal, with a maximum renewal interval of four years. Survey teams consist of one or more CMS member physicians and, usually, the director of the Division of Professional Services from the CMS staff. Team members, who do this voluntarily, must first serve as survey observers and are all well-versed in the many facets of the accreditation process. In reviewing or re-reviewing a CME provider, CMS employs a process similar to the one used by the ACCME when it accredits an organization under its direct jurisdiction. The provider is evaluated against a set of standards known as the ACCME "Essentials." New, revised "Essentials" go into effect in 1984. Since these are not radically different from the old ones, the "New Essentials" will be discussed here. In summary form, these are the ACCME "Essentials" which must be met to receive CME accreditation:

1. "The sponsor shall have a written statement of its continuing medical education mission, formally prepared by its governing body." The goals of the overall CME program, the scope of the CME effort, the characteristics of potential participants, and the several types of activities and services provided must be indicated.

2. "The sponsor shall have established procedures for identifying and analyzing continuing medical educational needs and interests of prospective participants," documenting all ways in which needs are identified and how the identified needs are used in planning CME programs.

3. "The sponsor shall have explicit objectives for each CME activity," indicating the needs to be addressed, participant characteristics, intended learning outcomes and/or content to be covered; and publicizing these objectives to potential participants.

4. "The sponsor shall design and implement educational activities consistent in content and method with the stated objectives," making sure that the methods are appropriate for the intended participants, documenting the planning procedures, and making the content and methods known to prospective participants.

5. "The sponsor shall evaluate the effectiveness of its overall continuing medical education program and component activities and use this information in its CME planning," making sure that appropriate methods are used and using the evaluation data both to assess whether the sponsor's CME mission is being attained by its educational activities and to plan future activities.

6. "The sponsor shall provide evidence that management procedures and other necessary resources are available and effectively used to fulfill its continuing medical education mission." Organizational structure, staff responsibilities, adequate facilities and budget, appropriate faculty, and attendance records and other documentation are all factors to be reviewed.

7. "The sponsor shall accept responsibility that the Essentials are met by educational activities which it jointly sponsors with non-accredited entities," providing evidence that it participates integrally in the planning and implementation of each jointly sponsored CME activity and conducting an evaluation of each jointly sponsored CME activity.<sup>7</sup>

Before a site survey is conducted, the provider submits a form which, in effect, provides CMS with most of the information needed to determine whether the "Essentials" are being met. On site, the survey team meets with the sponsor's CME committee and the administrator and other officials; attends a regularly scheduled CME activity; reviews CME records and other documents; tours the library and educational facilities, and often the entire facility; meets privately in executive session;

and then meets with representatives of the CME committee and others to discuss findings, make further recommendations, and indicate their decision on accreditation to be submitted to the CMS Committee on Accreditation.

The Committee on Accreditation reviews the results of the site surveys for each preceding quarter and makes final determination of the accreditation to be awarded in each case. Full accreditation can be awarded for up to four years; other categories include provisional, probationary, and non-accreditation. Interim progress reports and other stipulations are sometimes required. It should be noted, too, that the institution being reviewed reimburses the CMS for its cost to perform the survey.

The accreditation process is designed to inject a large measure of voluntary "quality control" into the efforts of CME providers. Once accredited, the provider can designate Category I CME credit for its activities that is recognized by the medical profession and the public as legitimate and professionally meaningful. Other actual or potential Colorado CME sponsors/providers not currently accredited are invited to contact the CMS Division of Professional Services to explore the possibility of becoming accredited.

Health Care Standards Committee,  
Robert V. Elliott, MD, Chairman

## New Foundation Guidelines

***The Colorado Foundation for Medical Care recently developed a number of new review criteria and guidelines. At their meeting on July 13, 1983, the CFMC Board of Directors approved guidelines for coronary arteriography and guidelines for admission for alcohol detoxification and rehabilitation. The Board also approved a subcommittee position paper on alcohol treatment. Finally, the Health Care Standards Committee reviewed and approved the Medicare guidelines for pacemaker insertion.***

### **GUIDELINES FOR CORONARY ARTERIOGRAPHY**

Requests had been received for guidelines for coronary arteriography from two of the Foundation's Regional Councils due to perceived overuse and inappropriate use of the procedure in some hospitals. The guidelines which follow will be used by the Regional Councils for special studies in situations where the appropriateness of or the need for the procedure is questioned.

These guidelines are a revision of guidelines which were originally developed in 1978. A subcommittee of the Foundation's Health Care Standards Committee composed of cardiologists and cardiac surgeons reviewed the old guidelines and made changes necessary to bring them up to current standards of care. Comments or questions about the guidelines are welcomed and may be addressed to Andrea Mitchell of the Foundation staff or Robert V. Elliott, MD, chairman of the Health Care Standards Committee. The guidelines were approved as follows:

#### **A. Reasons for Procedure**

1. Patients who are candidates for surgical revascularization. Such possible candidates may include:
  - a. chronic stable angina, inade-

quately controlled by appropriate medical therapy, and disabling to the patient.

- b. unstable, accelerating or Prinzmetal's Angina (defined as recurrent, prolonged or intense angina, often occurring without exertion),
- c. disabling post-infarction angina,
- d. patients with suspected ischemic heart disease resuscitated after cardiac arrest,
- e. patients after coronary bypass surgery who experience return of symptoms such as angina or congestive failure.

2. Symptoms of uncertain origin suggesting coronary disease (symptoms such as shortness of breath, arm pain, back pain, pressure, heaviness, etc.) after adequate evaluation (to include history, physical, x-ray, EKG, and stress testing or appropriate nuclear medicine studies (e.g. thallium study, gated blood pool) has failed to provide a positive diagnosis other than possible coronary disease.

3. Where diagnosis of ischemic heart disease is uncertain in unusual occupations involving public safety, such as airline pilots and drivers of public transportation, or persons engaged in hazardous occupations.

4. Evaluation of valvular heart disease when knowledge of coronary anatomy is important.

5. In asymptomatic patients with a two mm. or more ST segment depression on a stress electrocardiogram.

6. In asymptomatic patients with a two mm. or more ST segment depression on a low level stress test (up to 60 percent treadmill) post myocardial infarction.

7. Individuals with post-subendocardial infarction.

8. Post myocardial infarction patients under age 45 when necessary for evaluation and determination of prognosis.

B. In general, coronary arteriography is felt not to be justified:

1. To evaluate prognosis in patients who will not be candidates for surgical revascularization, (such as patients who have other systemic disease, precluding a potential for rehabilitation, such as disabling stroke, severe emphysema),

2. In asymptomatic patients with less than two mm. ST segment depression on a stress electrocardiogram,

3. In asymptomatic post-infarction patients, except as specified in 6, 7, or 8 above,

4. For routine post-operative demonstration of graft patency, or

5. For screening of asymptomatic or mildly symptomatic patients to rule out left main coronary disease,

6. As a routine evaluation prior to pacemaker implementation.

### **GUIDELINES FOR ADMISSION ALCOHOL DETOXIFICATION**

Medical directors from several treatment centers (hospital based as well as non-hospital) and a representative from the State Department of Health Alcohol and Drug Abuse Division were on the subcommittee responsible for developing the new guidelines for admission for alcohol detoxification. These guidelines represent a marked departure from guidelines which were previously in use. Primarily the changes are in the use of hospitals for alcohol detoxification and rehabilitation. In general the guidelines recommend hospitalization only for those individuals who are likely to have acute medical or psychiatric problems associated with alcohol withdrawal. Detoxification and

rehabilitation treatment which does not involve those complications should, if possible, take place in less costly non-hospital settings.

Along with the guidelines, the Board approved a "Position Paper" on alcohol treatment which makes recommendations to both providers and third-party payers for changes in alcohol treatment which will result in less costly, more effective care.

The following criteria are designed to be applied to any patient being admitted to an acute care hospital who has a diagnosis of alcoholism and who is being admitted for the purpose of alcohol detoxification. One of the following criteria must be met.

1. Evidence of withdrawal syndrome for acute effects of alcohol with any of the following:

- a. uncontrolled agitation
- b. hallucinations and/or paranoia
- c. marked confusion and disorientation as to time/place
- d. seizures
- e. delirium tremens

f. history of alcohol intake sufficient to produce withdrawal manifestations when alcohol is discontinued and there is a history of withdrawal problems

g. elevated vital signs, e.g. temperature greater than 38° C., pulse greater than 120, blood pressure greater than 180/110.

2. Alcohol intoxication or withdrawal complicated by concurrent psychiatric or medical conditions such as:

- a. pneumonia
- b. gastritis
- c. GI bleeding
- d. pancreatitis
- e. significant trauma, particularly head trauma and burns
- f. electrolyte imbalance
- g. significant infections
- h. severe anemia
- i. diabetes mellitus, uncontrolled
- j. significant neuromuscular disease
- k. hepatitis
- l. malnutrition
- m. Laennec's cirrhosis
- n. cardiac disease
- o. psychiatric problems, e.g. suicide risk, risk of violence toward others
- p. drug dependence

3. Blood alcohol content greater than 300 in person who is awake

4. Blood positive for alcohol in comatose or impending comatose patient

5. Emergency commitment petition

#### GUIDELINES FOR ADMISSION ALCOHOL REHABILITATION

The following are guidelines for admission of patients into 24-hour alcohol rehabilitation (hospital or residential) programs. It is the belief of the subcommittee that the provision of 24-hour alcohol rehabilitation in the hospital setting is usually not necessary (based on medical necessity for hospital level of care). Alcoholic patients who are appropriately provided rehabilitation services

in the hospital inpatient setting are those who have medical or psychiatric problems in addition to or due to their alcoholism. These patients would meet the general guidelines for medical necessity for inpatient hospitalization.

However, the subcommittee recognizes that alternative settings are not always feasible at this time and that alcohol rehabilitation must continue to take place in the acute care hospital in many cases. Before a patient is admitted to 24-hour rehabilitation in the hospital setting the attending physician should investigate any other alternative treatment settings which may be available (e.g. 24-hour residential care, day care, outpatient care). Admission to a 24-hour hospital treatment setting should only take place when other alternatives are not available.

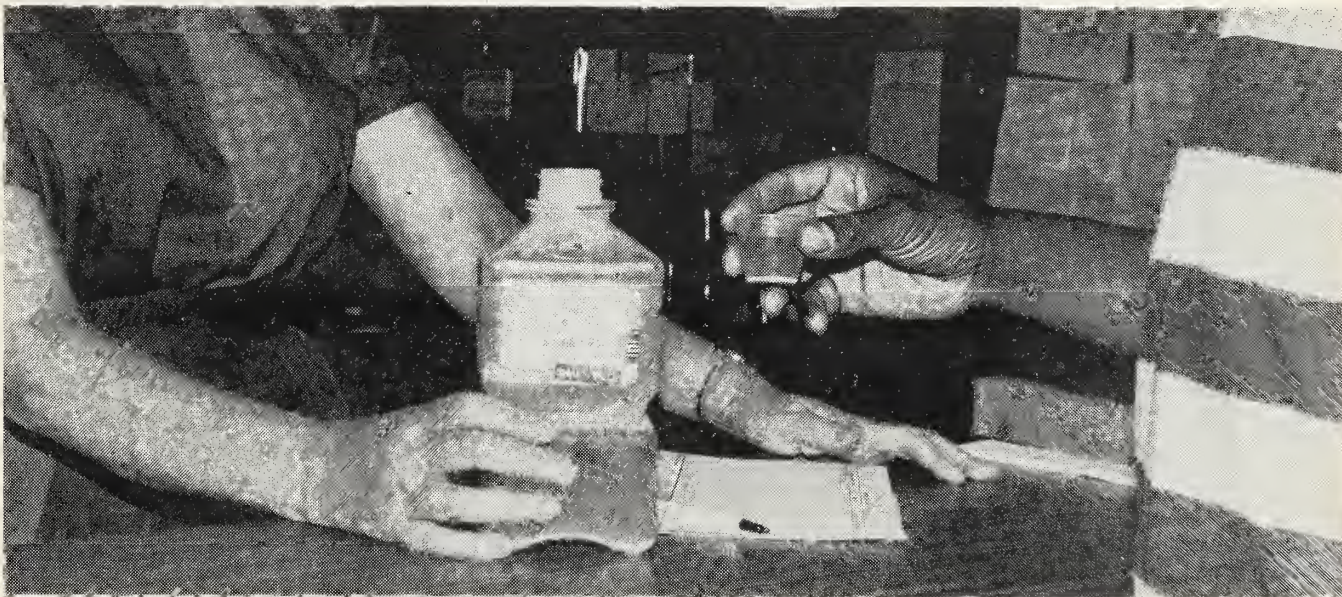

**Admission** Patients being admitted into 24-hour care for alcohol rehabilitation (hospital or residential) should meet all of the following criteria:

A. The patient has a diagnosis of alcohol abuse and/or dependence,

B. The patient meets one of the following clinical indications:

1. The patient has a need for intensive evaluation of substance abuse and/or concomitant psychiatric problems,

2. The patient has a history of repeated failures (relapses) following less intensive treatment (e.g. day

*The carefully controlled administration of Antabuse is an important part in the treatment of many alcoholic patients.*

care, outpatient care),

3. The patient requires the organization of a complex outpatient treatment plan,

4. The patient is experiencing intense psychosocial disruption as a result of substance abuse (e.g. involving great stress on the family, legal problems, work problems, major loss of resources — home, family, job).

C. There is an absence of physical or psychological impairment which is severe enough to preclude rehabilitation.

D. For those who have received at least 30 cumulative lifetime days of 24-hour (hospital or residential) treatment in the past, there is documentation by the physician as to the anticipated benefit to be gained from additional treatment.

It is expected that any individual who has a court order for involuntary commitment will meet the above criteria. However, if such is not the case, a court order for involuntary commitment is sufficient for admission to 24-hour rehabilitation.

**Continued Stay Review** In addition to the above guidelines for admission the subcommittee made the following recommendation for continued stay review of patient in 24-hour alcohol rehabilitation:

A. After each week (i.e. at seven days, 14 days, and 21 days) of 24-hour care the following elements should be documented by the attending physician:

1. That alternative treatment settings have been considered by the physician (e.g. day care, outpatient care) and that transfer to a less intensive treatment setting will increase the likelihood that the patient will resume drinking (e.g. the patient may require the enforced abstinence provided by the 24-hour setting or, the patient will return to a pathological support network in the community which will facilitate the patient's return to drinking).

2. That the patient is making progress in 24-hour care as evidenced by working through the "stages" of alcohol rehabilitation.

B. After 21 days of 24-hour care the following must be documented by the physician weekly in addition to the above:

That there is a likelihood of significant improvement if 24-hour care is continued.

**Note:** Stays of over 21 days will be referred on a weekly basis to the physician advisor for a determination of the continued medical necessity for 24-hour care.

#### **POSITION PAPER SUBCOMMITTEE ON ALCOHOL DETOXIFICATION AND REHABILITATION**

**Whereas**, there is no convincing clinical or research evidence to indicate that alcoholism detoxification or rehabilitation conducted in an inpatient acute care (hospital) setting produces outcomes/results superior to those produced as a result of other less intensive settings, and

**Whereas**, it is abundantly clear that treatment rendered in an acute care inpatient setting is more costly than care provided in non-hospital settings, and

**Whereas**, there are in existence an increasing number of facilities in the State of Colorado which offer alcoholism detoxification and/or rehabilitation services outside the hospital setting, and

**Whereas**, there are barriers to the provision of alcoholism detoxification or rehabilitation in these less intensive settings, specifically:

Medicare provides for only limited outpatient or clinic services for alcohol rehabilitation.

Medicare alcohol detoxification and rehabilitation services are included under the psychiatric benefit package which limits the type and amount of services which can be reimbursed.

Medicaid does not include alcohol treatment per se in its benefit package. Only medical and/or psychiatric complications are reimbursable under Medicaid.

Blue Cross and Blue Shield do not uniformly recognize less intensive settings in their benefit structure.

Private insurers in most cases will not reimburse for alcohol rehabilitative services which are provided outside the hospital setting, if such ser-

vices are recognized at all.

it is therefore

**Recommended** by the Colorado Foundation for Medical Care's Health Care Standards Committee that:

a) every effort be made to provide alcoholism detoxification and rehabilitation services in less expensive medical setting whenever possible, and

b) that the barriers to provision of detoxification and rehabilitation services in less intensive medical setting be removed, specifically

1) A model benefit package specific to alcoholism should be adopted by Medicaid and Medicare,

2) A model medical benefit package should be adopted by private insurance carriers which recognizes the cost efficiency of providing alcoholism services in other than the hospital setting.

c) that standards for the provision of care in such less intensive medical settings be established.

It is the official position of the American Medical Society on Alcoholism that alcoholism should be treated as a general medical problem which may or may not have a psychiatric component. Changes which are made in the benefit structures of Medicaid and Medicare should remove alcohol treatment from the psychiatric benefit package.

#### **MEDICARE GUIDELINES FOR PACEMAKER INSERTION**

In March of 1983 Medicare issued new guidelines for pacemaker insertion. The guidelines cover the conditions under which Medicare will pay for the insertion of permanent cardiac pacemakers. These guidelines went into effect March 16 and are being used to review claims which include pacemaker insertion. The Health Care Standards Committee review of the guidelines found them to be adequate and appropriate according to locally accepted standards of practice. The committee, therefore, chose not to make any recommendations for alterations for their use in Colorado. Copies of the guidelines may be obtained from: Mary Milligan, Secretary, Medical Criteria and Standards (321-8641 extension 318).

## The Colorado Medical Society Building

In approximately 16 months, Colorado Medical Society will have a new home. As *Colorado Medicine* goes to press, construction on the CMS building was to have begun during the week of August 15. Most of the pre-construction activity concerned with the building, including exterior/interior design, the construction contract and negotiations with First Interstate Mortgage Company, has been completed. Everyone involved in the project is becoming more and more excited as more than two years of planning comes to fruition.

As most members are aware, CMS purchased 10 acres of property on the southeast corner of Broadway and West Mineral Avenue. The medical society plans to build on five of these acres and sell the remaining five.

The value of the property is expected to increase, because of the rapid development of the surrounding area. In addition to the CMS building, the neighborhood will house medical facilities, shopping centers, restaurants, banks and professional office buildings. Littleton, where the building is located, is one of the fastest-growing cities in Colorado and one of the most progressive. The CMS building will be located on the western five acres, with an excellent view of the mountains to the west and the skyline of Denver to the north.

The building will have more than 87,000 square feet. It will consist of a five-story office tower, a garden level and a multi-purpose conference center. The conference center will be available not only to the medical society and other building tenants, but also, on a rental basis, to outside organizations.

The location of the building makes the conference center a highly viable rental facility. The building will be accessible from I-25; future expansion and construction of Santa Fe and C-470 will make the building accessible from these roads also. The center will be able to accommodate up to seven meetings at once. A staffed cafeteria will be able to cater meals for both internal and external meetings.

CMS members will have first chance at investing in the new building. By mid-September, you should have received a prospectus containing two preliminary offerings. The land offering has been designed primarily for investors to use their pension, Keogh and retirement funds. The building offering has been designed for the use of private funds because of the tax benefits available to the investor.

The prospectus containing the final offerings will be mailed in October; "standby" commitments can be accepted until that time. These two offerings are being registered with the Securities and Exchange

Commission and will be made available to the public in October. Until then, only members of the Colorado Medical Society will be allowed to take advantage of this investment opportunity.

For more information on the CMS building, contact Chris Stein at 321-8590.

## Larimer County Begins Bicycle Accident Prevention Program

The Larimer County Medical Society recently began a campaign to reduce the number of head injuries to children caused by bicycle accidents. Almost one-half million Americans are seriously injured each year in bicycle accidents. National studies indicated that more than half of these accidents involve children and approximately 85 percent of these accidents entail head injuries.

The society's "Heads First" campaign under the chairmanship of James S. Warson, MD, researched the availability of protective helmets and found that, according to tests performed by an independent testing laboratory, of approximately 50 commercially-sold bicycle helmets, only eight provide adequate protection.

The society has initiated a rebate program in which the first 500 children between the ages of seven and 16 who purchase one of the society-approved bicycle helmets will receive a \$5 rebate and stickers

for their bicycles and helmets. Funds to provide this rebate come directly from the physician members of the Larimer County Medical Society.

Bicycle shops in Larimer County who sell approved bicycle helmets have forms available for the parents or children to submit to the society for their rebates and stickers. A list of the eight approved helmets is on the forms.

Physicians involved in the development of this program are available to answer questions and to provide additional background. For more information, contact Tammy Tucker, Executive Secretary of the Larimer County Medical Society, at 482-4111, ext. 1540.

## CME To Be Available Via Cable TV

The American Medical Association's "Video Clinic" series of continuing medical education programs will soon be available on cable television.

The series has been produced by

Med-Video, a New York firm specializing in medical program production.

The "Video Clinic" series covers a broad range of topics of interest to practicing physicians. The programs have been produced at various major medical centers around the country. According to the AMA, more than 150,000 physicians in the United States have cable TV in their homes. The number is expected to double in the next few years. To reach this target audience, Med-Video will use various cable networks.

Up to now, "Video Clinic" has been available to physicians only on videocassettes on a rental or purchase basis. The program schedule will be announced to physicians through direct mail and advertisements in major medical publications in advance of showings.

All of the "Video Clinic" programs have been designated for Category I CME credits toward the AMA's Physician Recognition Award, when used with the appropriate syllabuses.

## Department of Health Revises TB Treatment Policies

*Editor's Note: In response to a number of complaints from private physicians regarding a proposed change in the Colorado Department of Health's dispensing of medication for the treatment of tuberculosis, the Colorado Medical Society arranged for a meeting between concerned physicians and representatives of the Department of Health.*

The meeting was held in conjunction with the regular meeting of the Council on Public Health on April 27, 1983. Presentations were made on the rationale for the proposed change, and the concerns of physicians with the ramifications of the new policy were aired.

As a result of the dialogue, a new policy was proposed. The revised policy adequately addresses many of the concerns that had previously been raised, and the Council on Public Health approved and endorsed the revision at its meeting of July 6, 1983.

The text of the Department of Health's policy on TB treatment drugs is presented below.

In an effort to reduce costs and increase cost-effectiveness while still achieving public-health goals in TB control, the policy regarding TB treatment drugs was changed in December so that metro-area patients had to be seen at Denver Metro TB Clinic to get treatment drugs at state expense. Although that policy had its merits, it did not adequately recognize the real contribution that private practitioners of medicine have made and do make to effective TB control. In particular, access to State TB treatment drugs was made inconvenient for some patients of Denver-area private physicians and there was concern about unnecessary intrusion into a previously existing doctor-patient relationship.

The public interest in TB patients treated in the private sector is in:

- assuring that TB patients are treated with an effective regimen;
- assuring that TB patients have a

## Emergency! First Aid

**Condition:** Inability of you and your staff to easily refer a patient to a physician in another area (geographic, specialty or component); concern that your fellow physicians are not referring patients to you.

**Symptoms:** Frequently asked questions, such as "Why doesn't someone put out a directory of MDs?" or "Why are we still using the 1978 CMS directory for referrals?" or "Where is my 1982 Physician's Directory?"

**First Aid Remedy:** If you lost your copy of the *Colorado Medicine Physician's Directory*, order another copy. Every member (in good standing) of CMS, yearly, receives one copy of the Physician's Directory, paid for out of CMS dues.

For detailed information and a personal consultation, complete the following form and mail immediately to CMS, 6825 East Tennessee, Bldg. 2, Suite 500, Denver, Colorado 80224.

Name \_\_\_\_\_

Specialty \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ Zip \_\_\_\_\_

Tel. \_\_\_\_\_

**CMS Member Services** is the physician's first aid in private practice needs.

(Please circle #8 on Reader Service Card)

documented conversion from culture-positive to culture-negative;

- assuring that appropriate contact investigations are done in a timely manner, and that newly infected persons are identified and treated with isoniazid;

- assuring that state-purchased drugs are not given for longer than necessary to achieve cure and prevent relapse;

- assuring that state-purchased drugs are not given to patients who do not really have tuberculosis.

We will, therefore, resume supplying medications for patients seen in private doctors' offices, though we would like to strongly encourage you to continue to send your patients to the Denver Metro TB Clinic for an initial evaluation, for x-rays and sputum cultures, and/or for follow-up for the duration of their TB treatment. We believe the clinic offers advantages in cost-effectiveness (it is certainly less expensive out-of-pocket to the patient), physician and nurse expertise, and ease of obtaining needed culture specimens and x-rays. Cultures and x-rays will be available at the clinic, no strings attached, for patients being followed by their private physicians, as long as the protocol described below is being followed.

Medications will be sent only to a physician's office, not to the patient's home. Accompanying each monthly shipment of medication will be a status report form which must be returned to Denver Metro TB Clinic before additional medications will be sent. This form is fairly simple, but asks for information critical to the public health purposes described above.

We consider the following to constitute the minimum follow-up necessary in a private physician's office for public-health purposes:

1. Sputa and/or appropriate specimens for AFB smear and culture before drugs are started, then monthly (for pulmonary and genito-urinary) until culture is negative, then every three months till completion of therapy.

2. Chest x-rays monthly until stabilization, then quarterly to completion of therapy (for pulmonary disease — appropriate other films for disease at

other sites may be substituted).

The regimen we recommend for all new cases of tuberculosis is INH and rifampin for nine months, or until six months after sputum conversion, whichever occurs last. For patients from Southeast Asia, or others who are suspected of having primary drug resistant organisms, INH, rifampin and ethambutol are recommended until drug sensitivities are available eight weeks or so into therapy. We strongly suggest that patients in whom compliance is doubtful be put on a directly-administered twice-weekly regimen; it may be simplest to have the patient treated at Denver Metro TB Clinic if compliance is a problem.

The Denver Metro TB Clinic is currently using a six-month directly administered treatment regimen consisting of INH and rifampin for four months, which is well adapted for treatment of the non-compliant or potentially drug-resistant patient and has been very effective and non-toxic to date. Some "compliant" patients have, in fact, opted for six months of treatment rather than the standard nine months. Further information about the protocol can be obtained anytime from the Denver Metro TB Clinic if you are interested.

If you are not able to obtain the minimum public-health follow-up suggested above, and/or cannot return the monthly status report form on your patients with active disease, we again suggest you refer your patient to the Denver Metro TB Clinic to be followed there. We will not be able to supply treatment drugs through private physicians' offices for patients where the necessary follow-up is not done and documented.

## **Guidelines for Physician Assistant Practice Approved**

During the most recent (1983) legislative session, the Colorado State Legislature approved a bill (Senate Bill 152) which clarifies and defines general guidelines for the practice of physician assistants in Colorado.

The bill codifies the standards of

training and certification required for physician assistant practice:

1. Graduation from an AMA/CAHEA approved PA educational program
2. Successful completion of the National Board Exam for PAs administered by the National Commission on Certification of Physician Assistants.

or, demonstration of successful practice in Colorado for five years, with a statement attesting to this by a supervising physician. This latter pathway will be open only until January 1, 1985, when all persons wishing to practice as PAs must have passed the National Board Exam; those persons who have not graduated from an approved program must be able to convince the Board of Medical Examiners of the adequacy of their training.

This bill further gives the Colorado Board of Medical Examiners the authority to put forth rules and regulations governing PA practice, in the same manner that this is done for physicians. The Board is currently formulating these rules and they will be reviewed at a public hearing in October of this year before taking effect on January 1, 1984.

## **Jail Project News**

### **BOULDER AND MESA COUNTIES AWARDED REACCREDITATION**

Our hats are off again to Sheriffs Leach and Willams (Boulder and Mesa counties) for being the first two county jail systems to be re-accredited for another two year period. They were also the first two jail health care programs to be awarded AMA accreditation certificates in this state.

The Colorado Medical Society is the originator and continues as the project coordinator in the state-wide program to raise health care standards in all jail facilities. However, participation in this three-year-old program is wholly voluntary on the part of the jail facilities.

During the 1982-83 fiscal year, ending June 30, 1983, Colorado Governor Richard D. Lamm and Colorado Medical Society leadership presented administrators of four Colorado county detention facilities with the American Medical Association

# Close your eyes. Now have someone read this to you.

You are blind. A student. Facing four years of college. With about thirty-two textbooks to read. Plus fifty supplemental texts. How are you going to manage?

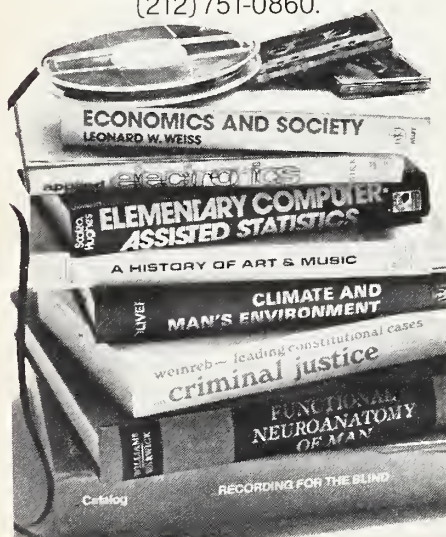

With Recording for the Blind. Since 1951, we've helped over 53,000 blind, perceptually and physically handicapped students get through school. By sending them recordings of the books they need to read. Free.

Recording for the Blind is non-profit, and supported by volunteers and contributions from people like you who can imagine what it's like to be blind.

tion's **Two-Year Certificate of Accreditation for Standards of Health Services in Jails.** During the first two years of the program, seven Colorado county jails received two-year accreditations in the program.

## ROCKY MOUNTAIN CORRECTIONAL HEALTH SERVICES ASSOCIATION

Many of the correctional/detentional health care providers have expressed an interest in forming an organization of multidisciplinary professionals involved in health care delivery in this setting. The Rocky Mountain Correctional Health Services is being organized to meet this need. The primary objectives of this organization will be to provide a forum for sharing and discussing correctional health issues and to provide continuing education opportunities pertinent to correctional health care delivery.

The first general meeting will be held September 24, 1983 at the Holiday Inn North to solicit charter membership. Featured in the program will be Dr. Robert Brutsche, Assistant Attorney General for the U.S. Public Health Service and Medical Director of the U.S. federal prison system. Mr. Chase Riveland, Executive Director of the Colorado Department of Corrections will be the luncheon speaker. There will be a \$10.00 registration fee which will include lunch. For those interested in attending, contact Chris Wilson, CMS offices, 321-8590, ext. 242.

## Leadership Workshop for Women Physicians

A leadership skills workshop for women physicians who want to become more involved in local, state or national medical associations is scheduled for September 24-25, 1983, at the Sheraton Poste Inn in Cherry Hill, New Jersey. The workshop is sponsored by the AMA and several state medical societies, including New Jersey, Connecticut, New Hampshire, Delaware, Pennsylvania and Maryland.

The major workshop on Saturday, September 24, will feature sessions on plugging into the medical society system, developing a strategy for involvement, diagnosing individual

leadership styles, and making effective presentations. On Sunday, September 24, concurrent seminars on public speaking, negotiating skills and parliamentary procedure will be offered.

Registration fee for the Saturday workshop is \$95 for AMA or state society members and \$115 for non-members. Optional seminars and fees are: Parliamentary Procedure, \$60; Negotiating Skills, \$60; and Public Speaking, \$100. For more information, contact Rebecca Mounsey at the AMA, (312) 751-6230.

## Auxiliary Column Wins Award

At the AMA Auxiliary Convention in Chicago in June, the Colorado Medical Auxiliary received a first place recognition award for auxiliary pages in a medical society publication (*Colorado Medicine*). This column, the "Auxiliary Report," has been written for the past year by Sharon Ritzman, President of the CMS Auxiliary.

In other activities at the convention, Betsy Becker was elected to the office of 1983-84 AMAA Western Regional Director. Mrs. Ritzman has been appointed to the 1983-84 AMA Auxiliary Health Projects Committee. Her area of concern is child abuse and neglect.

## Prescription Precautions

*Ed. Note: These suggestions come from the Colorado Pharmacy Board and may help to prevent drug purchases by narcotics addicts.*

1. Protect your prescription blanks by keeping them in a secure place.
2. When a pharmacy calls you to check on narcotic scrips, don't think of such calls as "nuisance calls" but realize that they are done to verify legitimate prescriptions.
3. DEA numbers should be on all scrips and legible.
4. Patients on long term narcotics (terminal carcinoma, etc.) should be made known to their pharmacists.
5. Spell out the number of narcotics to be dispensed so that this number cannot be altered.

According to a recent newspaper series on unemployment in the state, (*Rocky Mountain News*, July 25-30, 1983) the critical need for medical care of the unemployed and their families continues to rise.

The series reported that the damage caused by the emotional impact of unemployment is sometimes more ravaging than the economic consequences. A Congressional study reporting that for every one percent increase in the unemployment rate there is a 3.4 percent increase in state mental hospital admissions was cited. Statistics in Colorado confirm these grim figures. An outreach office of the Arapahoe Mental Health Center has seen its waiting list of patients soar 72 percent from the first quarter of 1982 to the first quarter of 1983. The Jefferson County Mental Health Center has seen their share of clients with no medical insurance jump from 45 percent in the period of July-October 1981 to 77 percent in July-October 1982.

Additionally, there has been a 24 percent increase in reported child abuse cases, a 10 percent increase in 1982 in the number of battered women housed in 10 private shelters throughout the state, and Denver General Hospital reports seeing a far greater number of people in their emergency rooms who are out of work and without medical insurance.

At their June meeting, the CMS Board of Directors approved having the Council on Socio-Economics, with assistance from a philanthropic organization, The Piton Foundation, act as a resource in the implementation of local pro bono projects to provide medical care for these swelling populations.

Component societies from several communities currently experiencing severe economic recession have identified an acute need for such projects in their areas, and updates on various component society initiatives are provided below.

#### **Pueblo County Medical Society**

The Pueblo Coalition for Health Care, which was initiated by the Pueblo County Medical Society in June 1982, is now giving medical and dental care in Pueblo to medical indigents (persons with no insurance of any kind, including Medicaid,

# Component Societies Provide Assistance for Medically Indigent

*Council on Socio-Economics, Donald Parsons, MD, Chairman;  
David Hlavac, Director, Division of Medical Economics and  
Professional Relations*

**Report prepared by Melba Pascal, staff assistant.**

---

Medicare, etc.). Medical care is provided through the Family Practice Program (28 residents under the Director, Robert Stelle, MD) located at the Colorado State Hospital in Pueblo.

Screening for eligibility is being handled by the Pueblo Department of Social Services. Pharmacists are providing drugs at cost only. Currently, St. Mary-Corwin Hospital is handling billing for providers at no cost. Physician referrals from the Family Practice Program go to Pueblo County Medical Society specialists who have volunteered to see patients, charging the coalition only for supplies used. Parkview Episcopal Hospital is doing publicity and press releases at no cost to the Coalition. Colorado State Hospital has provided free space for an office used by the Department of Social Services to screen incoming patients. A dental program has been established by the Southeastern Colorado Dental Society, and patients are seen in local dentists' offices at a set fee schedule comparable to Medicaid.

Financial assistance in implementing the program came through a \$49,000 grant from the Colorado State Legislature. The Coalition has submitted a grant application to the U.S. Department of Health and Human Services for funds for one year for more extensive medical and dental services, and is now awaiting a decision from HHS.

The Pueblo County Medical Society is working with many groups

through the coalition including the Southeastern Colorado Dental Society, Pueblo Pharmacal Association, Department of Social Services, Pueblo City-County Health Department, Human Resources Commission, three local hospitals, Avondale/Boone Health Center, Family Medicine Program, Congressional offices of Representative Ray Kogovsek, Senator Gary Hart, Senator William Armstrong, Colorado legislators and several others.

#### **El Paso County Medical Society**

The El Paso County Medical Society began a program to provide care to the medically indigent in June, 1983.

The program works directly with the Community Health Center and indirectly with the American Red Cross, Silver Key, United Way, The El Pomar Foundation, and city and county governments.

One hundred six physicians have volunteered their services for the initial round of the program. It is the intention of the El Paso County Medical Society to continue supporting the program, and to encourage further participation, stability and recognition of the program in the community.

#### **Aurora-Adams County Medical Society**

The Aurora-Adams County Medical Society is currently studying the health care needs of the unemployed in their area. A committee has been formed with Dr.

Jerome Buckley as Chairman, and Dr. Christopher Smith as Co-Chairman. The committee will present its findings at the next meeting of the society on September 6, 1983.

#### **Larimer County Medical Society**

The Larimer County Medical Society recently assigned a task force to determine the need for medical assistance among the increasing number of medically indigent within Larimer County. After careful consideration, the society recommended that a society-sponsored program for the recently unemployed residents of Larimer County be implemented.

A letter explaining the proposed program developed by the Executive Committee's task force to provide free medical care to the Larimer County resident unemployed and their families, and requesting expressions of interest, was sent to society members in the latter part of June.

As of mid-July, approximately sixty positive responses from physicians interested in participating in the program have been received. Plans to implement the program will begin shortly.

#### **Arapahoe County Medical Society**

The Arapahoe County Medical Society Board of Trustees recently appointed a committee, chaired by Dr. Arthur K. Strasburger, to explore the need for a pro bono medical care project in the Arapahoe County

---

The damage caused by the emotional impact of unemployment is sometimes more ravaging than the economic consequences.

---

area.

The committee is presently in the process of developing a questionnaire to be mailed to all members in August to determine if member physicians would be willing to

volunteer their fair share of medical care for low-paying or non-paying patients.

#### **Mesa County Medical Society**

The Mesa County Medical Society is currently investigating the need for a free or part-pay project to provide care for the recently unemployed in the Grand Junction area. Information on such a project will be sent to members in the society's fall newsletter.

#### **Clear Creek Valley Medical Society**

The Indigent Panel of the Clear Creek Valley Medical Society has been in place for many years. It is used primarily by the schools whenever they find a child needing medical services for which their parents are unable to pay. Panel members, whose participation is voluntary, are called in rotation. School nurses are asked to screen so that the panel's services are given those really needing them. The occasional indigent adult using the service is usually a person calling for help through the society's referral service, or referred by a local helping organization.

CCVMS established an ad hoc committee to look into expanding and advertising their Indigent Panel to handle needs resulting from present unemployment. The committee determined that there is not a great need at this time, and is therefore evaluating various plans utilized by other medical societies to see if any would be of benefit to their community on a long-range basis.

#### **Other Programs: Leadville, Colorado**

A medical assistance program in Leadville, Colorado, an area with very high unemployment, was implemented in mid-July to provide medical expenses for indigents and their families. State Senator Harvey Phelps was instrumental in assisting the community in obtaining a grant to fund the program. Screening is done through the county offices of the Department of Social Services, and the program will continue through December 31, 1983.

Leadville also has a funded WIC (Women/Infant/Child) program to help new mothers obtain information and foodstuffs (milk, eggs and cheese) for proper nutrition.

## **Help Available to Impaired Physicians**

The Colorado Medical Society has had an impaired physician program for several years, at the direction of the CMS House of Delegates. The program is designed to assist physicians to confront their problems and find help. Physicians, family members and others also may gain access to the program by contacting the staff of the Division of Professional Relations and Medical Service at the CMS office in Denver, 321-8590. Physicians wishing to assist with the program are urged to contact the committee by calling 321-8590.

The other members of the committee are:

Barry R. Berns, MD, Windsor, 686-7611  
Edmund Casper, MD, Denver, 893-7377  
Telford A. Davis, MD, Durango, 259-0094  
Franklyn M. Newmark, MD, Lakewood, 238-8719  
David R. Rice, MD, Aurora, 343-4655  
Richard E. Troy, MD, Grand Junction, 242-7697  
Paul T. Yoder, MD, La Junta, 384-8766  
Lawrence E. Austin, MD, Pueblo, 542-5250  
N. Kenneth Furlong, MD, Englewood, 789-7928

If you know of a colleague who has problems with drug or alcohol dependency, or if you think you may have a problem, talk to one of the members of the CMS Physician Health and Rehabilitation Committee. The chairman, John S. Avery, MD, may be reached by calling his office in Boulder, 440-3088.

## September

**16-17 Treatment and Management of Infectious Disease** — Lawrence, Kansas. Sponsored by the University of Kansas College of Health Sciences and Hospital. To be held at the Lawrence Holidome, 200 West Turnpike Access Road, Lawrence, Kansas. AMA, AAFP and CNE credit available. Contact the Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

**16-18 Third National Seminar on Community Cancer Care** — Hyatt Regency, Indianapolis, Indiana. For information, write to the Office of Continuing Medical Education, Methodist Hospital of Indiana, Inc., 1604 North Capitol Ave., Indianapolis, Indiana 46202.

**19-25 General Surgery Conference** — Mariner's Inn, Palmetto Dunes Resort, Hilton Head Island, South Carolina. 22 hours of credit in AMA Category 1, AAFP prescribed and from the Colorado Nurses' Association. Tuition is \$335.00 for practicing physicians and \$225.00 for residents, nurses and other health professionals. Contact the Beth Israel Conference Program, P.O. Box 11338, Denver, Colorado 80211. Phone toll free: (800) 525-5810. In Colorado, call (303) 629-5333.

**21-22 Recent Advances in Management of Insulin-Dependent Diabetes and Diabetes in Pregnancy** — Battenfeld Auditorium, 39th and Rainbow Blvd., University of Kansas Medical Center, Kansas City, Kansas. Fee \$150.00 for physicians and \$75.00 for nurses and Allied Health professionals. 12 hours credit AAFP, CNE and Dietitian. 12.75 hours credit by the AMA. For more information, contact the Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Boulevard, Kansas City, Kansas 66103. Phone: (913) 588-4488.

**22-24 Stroke: Onset, Evaluation, Management and Rehabilitation** — Town and Country Hotel, San Diego, California. Fee: \$175.00 for 2½ days. For more information contact Sharp Memorial Hospital Center for Health Education, 7901 Frost St., San Diego, California 92123. Phone: (619) 292-2551.

**23-24 Frontiers in Longevity Research: Applications Nutritional and Other Discoveries in the Prevention of Age-related Disorders** — Grand Ballroom, Beverly Hilton Hotel, Beverly Hills, California. Fees: \$195.00 for physicians, \$135.00 for physicians-in-training, postdoctoral research fellows, nurses, dieticians, and other Allied Health professionals and \$25.00 for students in the health professions. For information write to Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California 90024. Phone: (213) 825-8421.

**23-25 Management of Low Back Pain** — The Western Crown Center, One Pershing Road, Kansas City, Missouri. Sponsored by the University of Kansas College of Health Sciences and Hospital. Fees: \$250.00 for physicians and \$150.00 for residents, nurses and Allied Health professionals. Credit will be awarded by the AMA, AAFP, CNE and PT. Contact the Office of Continuing Education,

University of Kansas Medical Center, Rainbow at Olathe Boulevard, Kansas City, Kansas 66103. Phone: (913) 588-4488.

**25-30 Frontiers in Clinical Nephrology** — Acapulco, Mexico. 12 hours of credit in AMA Category 1. Fees: \$375.00 for physicians and \$300.00 for Allied Health professionals. For more information, contact Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California 90024. Phone: (213) 825-9187.

**Sep 25-Oct 1 Reproductive Medicine Conference** — Mariner's Inn, Hilton Head Island, South Carolina. 22 hours of credit: AMA Category 1, AAFP prescribed and Colorado Nurses' Association. Tuition is \$335.00 for practicing physicians and \$225.00 for residents, nurses and other health professionals. Contact Beth Israel Conference Program, P.O. Box 11338, Denver, Colorado 80211. Phone: outside Colorado (800) 525-5810 or 1-629-5333 from within Colorado.

**29-30 Birth Defects** — Battenfeld Auditorium, University of Kansas Medical Center, 39th and Rainbow Blvd., Kansas City, Kansas. Credit will be awarded by the AMA, AAFP and CNE. Contact the Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

**Sep 30-Oct 1 12th Annual Montrose Fall Clinics** — Montrose, Colorado. 10 hours of CME credit. Contact Kathy Holman, Montrose Memorial Hospital, 800 South Third St., Montrose, Colorado 81401. Phone: (303) 249-2211.

**Sep 30-Oct 2 Women in Medicine: Looking Ahead Today** — Hyatt Regency at Crown Center, 2345 McGee, Kansas City, Missouri. Fee: \$100.00 for physicians. 13 hours of credit by the AMA and 12 hours by the AAFP. Contact the Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

## October

**3-7 Vascular Surgery Board Certification Review** — The Beverly Hilton, Beverly Hills, California. Time: from 8:00 a.m. to 5:00 p.m. Approved for AMA Category 1 credit. Fee: \$550.00 for physicians and \$412.50 for University of California Schools of Medicine faculty. Contact Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California. Phone: (213) 825-7257.

**5-8 International Skeletal Society Meeting - 10th Annual Refresher Course** — Geneva, Switzerland. Some 63 internationally known speakers will present the course. 25 hours AMA Category 1 credit have been requested. Fees for North America: (U.S. Dollars) \$50.00 for members, \$350.00 for non-members, \$175.00 for those in training with verification. Contact (in North America) Ms. Janice Ford, 39 Dunlin Way, Erial, New Jersey 08081 USA.

**8-13 General Medicine Conference** — Hilton Head Inn, Hilton Head Island, South Carolina. 22 hours of AMA Category 1, AAFP Prescribed and Colorado Nurses' Association credit. Tuition: \$335.00 for practicing physicians and \$225.00 for residents, nurses and other health professionals. Contact Beth Israel Conference Program, P.O. Box 11338, Denver, Colorado 80211. Phone toll free: (800) 525-5810, or in Colorado: 629-5333.

**8-15 5th International Seminar on Operative Arthroscopy** — Maui Marriott Resort, Maui, Hawaii. 30 hours credit in AMA Category 1, including laboratory sessions. Fee: \$825.00 with laboratories and \$725.00 without laboratories. Contact Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California, 90024. Phone: (213) 825-8421.

**8-16 8th Annual International Body Imaging Conference** — Maui Surf Hotel, Maui, Hawaii. Approximately 28 hours of Category 1 CME credit. Fees: \$395.00 and \$345.00 for residents and technologists with letter. Contact the Conference Secretary, 8th Annual International Body Imaging Conference, Department of Radiology, West Park Hospital, 22141 Roscoe Blvd., Canoga Park, California 91304. Phone: (213) 340-0580, ext. 280.

**10-14 Trauma and Medical Emergencies** — Denver General Hospital, Denver, Colorado. Sponsored by Denver General Hospital and St. Anthony's Hospital Systems. Fees: Didactic Session — \$375.00, Elective — \$75.00 and up. Credits: 31 hours Category 1 ACEP (elective hour for hour) and 50 AAFP Prescribed hours. Contact Sabrina Kerford, Denver Postgraduate Institute, 777 Bannock St., Denver, Colorado 80204. (303) 893-6000.

**10-14 Postgraduate Course in Clinical Management and Control of Tuberculosis** — Jewish Hospital and Research Center, Denver, Colorado. Presented by the National Jewish Hospital and Research Center/National Asthma Center with the collaboration of the Denver Health Department, the University of Colorado School of Medicine, the Colorado Department of Health and Fitzsimons Army Medical Center. Fee: \$300.00. 38 hours credit AAFP prescribed and AMA Category 1. Contact the TB Course Office, Department of Medicine, National Jewish Hospital and Research Center, 3800 East Colfax Ave., Denver, Colorado 80206. Phone: (303) 398-1700.

**12-14 Intravenous Nutrition in the Newborn** — Denison Auditorium, University of Colorado School of Medicine, Denver, Colorado. 16 hours credit AMA Category 1. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**13-15 38th Annual Postgraduate Course in Internal Medicine** — Battenfeld Auditorium, University of Kansas Medical Center, 39th and Rainbow Blvd., Kansas City, Kansas. Fee: \$250.00. 18 hours credit AMA Category 1 and 16.5 hours AAFP Prescribed. Contact the Office of Continuing Education, University of Kansas Medical Center, Rainbow and Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

**20-22 22nd Annual Scientific Session** — Hotel Del Coronado, San Diego, California. Sponsored by the Western Society of Allergy and Immunology. Contact Mrs. Joyce M. Gullixson, Executive Secretary, WSAI, 1700 S.W. Columbia, Portland, Oregon 97201. Phone: (503) 224-6159.

**22-23 Pneumatology Problems: Diagnostic and Therapeutic Challenges** — Denver, Colorado. A multi-educational approach including formal presentations, panel discussion, workshops, patient sessions and a

self quiz. Sponsored by the Joe and Betty Alpert Arthritis Treatment Center and Rose Medical Center, Denver. Internists, Family Physicians, Orthopedic Surgeons, Nurse Specialists, Physician Assistants, O.T.s and P.T.s will be interested. 12 hours AMA Category 1, AAFP Prescribed and Nursing & Physician Assistant credits will be awarded. Contact Ms. Dorothy Bailey, Program Coordinator, Rose Medical Center, Office of Education, 4567 East 9th Ave., Denver, Colorado 80220. Phone: (303) 320-2102.

**23-27 American College of Chest Physicians, 49th Annual Scientific Assembly** — Hyatt Regency Hotel, Illinois Center, Chicago, Illinois. Contact Mary Ellen Pictor, Coordinator, American College of Chest Physicians, 911 Busse Highway, Park Ridge, Illinois 60068. Phone: (312) 698-2200.

**24-28 8th Annual San Diego Postgraduate Radiology Course** — San Diego, California. 27 hours credit AMA Category 1. Contact Mary J. Ryals, P.O. Box 61203, DFW Airport, Texas 75261. Phone: (214) 659-9590.

**24-29 30th Annual Family Practice Review** — Denver, Colorado. Dennison Auditorium, University of Colorado School of Medicine. 40 hours AMA Category 1 and AAFP Prescribed credit. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

**25-26 Medicine and Religion: Superstition, Tradition and Ignorance** — Kansas City, Kansas. Battenfeld Auditorium, University of Kansas Medical Center, Rainbow at Olathe Blvd. Fee: \$80.00 for physicians and \$40.00 for nurses, other health professionals and social workers. Credit: AMA, 13 hours; AAFP, CNE and SW; 12 hours. Contact the Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

**28-29 Geriatric Medicine Today and Tomorrow** — Boswell Memorial Hospital, Sun City, Arizona. Fee: \$100.00 for doctors and \$50.00 for non-physicians. Marian Richardson, Executive Secretary, Western Division of the American Geriatrics Society, 13220 N. 105th Ave., Room 12, Sun City, Arizona 85351. Phone: (602) 977-1877, 8:00-11:00 a.m.

**28-30 Diagnostic Radiology Seminar** — Lincoln Hotel, Dallas, Texas. 18 hours credit AMA Category 1. Tuition \$300.00 for physicians and \$175.00 for residents and fellows. Contact Dolly Christensen, Radiology Postgraduate Education, University of Texas Health Science Center, 5323 Harry Hines Blvd., Dallas Texas 75235. Phone: (214) 688-2502 or 638-2166.

## November

**10-12 Temporomandibular Joint - Pain and Dysfunction** — Sheraton Centre Hotel, New York City. Fee: \$375.00. 24 hours credit AMA Category 1, ADA Continuing Education Registry and AAGD. Contact Educational Resources Associates, Inc., P.O. Box 369, Brookline, Mass. 02146. Phone: (617) 738-8859 or 738-8861.

**11-13 2nd Annual Doppler Echo Course: A Quantitative and Qualitative Approach** — Sheraton-Anaheim, Anaheim, California. S. J. Golberg, MD, Course Director. Sponsored by H.E.L.P., An Arizona non-profit health education organization. Contact S. J. Goldberg, MD, P.O. Box 13689, Tucson, Arizona 85732. Phone: (602) 626-7482.

# Special Bulletin

You may expect to receive the preliminary (Red Herring) **prospectus** for the Land and Building Partnerships in the latter part of **September**. These two offerings will provide an excellent investment for you personally as well as for your business and/or pension fund. Please stay tuned to the next issue of *Colorado Medicine* for further details!

There was an extensive presentation by the Building Committee at the recent Interim Meeting of the House of Delegates. The following Partnership proposals were presented in detail, recommended for approval by the Building Committee and the Board of Directors, and approved by the House of Delegates.

## **FOR INFORMATION PURPOSES ONLY**

### **SUMMARY OF OFFERING**

**\$3,000,000 maximum October 1, 1983**

## **COLORADO MEDICAL LAND PARTNERSHIP, LTD.**

6,000 Units of Limited Partnership Interests — \$500 Per Unit  
Minimum Investment: Five Units (\$2,500); or  
Four Units (\$2,000) for an Individual Retirement Account

### **PARTNERSHIP OBJECTIVES:**

Acquire 10.0 acres of land from the Colorado Medical Society ("CMS"), sell approximately 5.0 acres ("East Tract") for a substantial return of funds to investors and to lease the remaining 5.0 acres ("West Tract") to the Colorado Medical Building Partnership, Ltd. with the sale of the West Tract to CMS to occur within 5-10 years.

### **FINANCING:**

- 1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Land Partnership.
- 2) Units of Interest to be sold: Up to 6,000 Units for maximum gross proceeds of \$3,000,000.

### **INVESTMENT OBJECTIVES:**

The Land Partnership's objectives are primarily designed for pension and profit sharing programs and include: (i) to share the appreciation of the equity of the East and West Tracts, which appreciation will be realized upon the sale of such Tracts; (ii) to provide the Limited Partners with cash distributions generated through lease payments commencing approximately August 1, 1983; (iii) to provide the Limited Partners with a substantial return of funds upon the sale of the East Tract for a minimum of \$1,400,000 guaranteed by CMS; any cash in excess of \$1,400,000 will be allocated 75% to the Limited Partners and 25% to the General Partners; (iv) to obtain long-term appreciation in the West Tract of not less than \$1,500,000, guaranteed by CMS, with the sale to occur within 5-10 years; and (v) to provide Limited Partners with an increased projected after tax annual return upon the sale of the East Tract.

**For further information, call:**

**321-8590, ext. 202**  
**Colorado Medical Society**

**THIS SUMMARY DOES NOT CONSTITUTE AN OFFER OR SOLICITATION TO ANYONE IN ANY JURISDICTION. THIS SUMMARY HAS BEEN PREPARED FOR INFORMATIONAL PURPOSES ONLY, ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE.**

**FOR INFORMATION PURPOSES ONLY**

**SUMMARY OF OFFERING**

**\$4,000,000 maximum October 1, 1983**

**COLORADO MEDICAL BUILDING PARTNERSHIP, LTD.**

8,000 Units of Limited Partnership Interests — \$500 Per Unit

Minimum Investment: Five Units (\$2,500); or

Four Units (\$2,000) for an Individual Retirement Account

**PARTNERSHIP OBJECTIVES:**

To lease approximately 5.0 acres of land from the Colorado Medical Land Partnership, Ltd. and construct a commercial office building thereon of five stories to become the headquarters and conference center for the Colorado Medical Society ("CMS") and its affiliated entities and to lease the remaining office space to third parties.

**FINANCING:**

1) A Colorado Limited Partnership with subsidiaries of CMS as General Partners to organize, operate and manage the Partnership.

2) Units of interest to be sold: Up to 8,000 Units for maximum gross proceeds of \$4,000,000. In addition to using gross proceeds from the sale of Units, the Partnership will obtain additional funds in the form of a mortgage in the amount of approximately \$6,000,000 to finance the proposed building.

**INVESTMENT OBJECTIVES:**

The Partnership's objectives are primarily designed for individual investors and include: (i) to obtain long term appreciation in the value of the building; (ii) to pay 99% of the tax benefits to the Limited Partners; and (iii) to provide Limited Partners with a projected after tax 3 for 1 return of their net investment within 8 years through a mandatory buy-out of this Partnership by CMS.

**For further information, call:**

**321-8590, ext. 202  
Colorado Medical Society**

# An Open Letter: How Shall Rural Colorado's Medical Care Be Judged?

---

*Editor's Note: Following is a reprint of a response by Merlin G. Otteman, MD, President of the Colorado Medical Society, to an investigative report in the public media about medical treatment and health care in rural areas of Colorado. It is not possible to retrace every step of the investigative trail which culminated in the report stating there was a "rural health crisis" in Colorado. However, regarding medical practice and practitioners of Colorado, something must be said in their interest . . . . not in their defense, for, as Dr. Otteman points out, rural medical practice will be different than that practiced in the urban environment.*

*At the same time it was released to the public media, this written response was forwarded to every component society in Colorado, making it available to local practitioners and media alike.*

*August 30, 1983*

In response to a recent series of articles in a major daily newspaper concerning Colorado's "rural health crisis," Colorado Medical Society wishes to also address the community on behalf of the physicians of Colorado. The Colorado Medical Society does, indeed, agree with the thrust of the newspaper investigation and report in a majority of the areas touched upon, because CMS supports the best health care for all of Colorado.

The newspaper series serves to point up the needs of rural health care while, at the same time, doing a disservice to all Colorado physicians and citizens alike. The physician members of Colorado Medical Society are doing the best job they can of providing high quality health care with available resources, wherever they practice. If it weren't for those few hearty, dedicated physicians willing to devote their lives to an all-consuming rural practice, Colorado would have even less medical service in many areas of the state.

The series of investigative reports failed to take into account the fact that medical service needs are different in each specific rural location. The needs are not only different in urban versus rural settings, they differ from one rural location to another. No one can judge rural medical treatment and health care services based on urban commitment, personnel and funding in Colorado. Colorado physicians are doing the best they can in adapting to local community needs/demands.

We believe the quality and availability of rural health care in Colorado is as good as, or better than anywhere in the United States that people choose to live in rural areas.

A long-standing objective of the Colorado Medical Society and its 5,000 member physicians has been to assure quality health care to all of Colorado and all those persons in need of medical treatment. The following are a few of the positive steps taken by CMS and its membership toward this quality assurance:

1. Physicians are encouraged to practice in rural areas of the state, but when the physician is faced with continual working in triage, transporting patients long distances, no emergency medical services, a local economy that cannot support adequate health facilities, no time off for continuing medical training or rest, working in a solo practice

with no help or relief, limited specialists available locally . . . . there will naturally be problems and areas of Colorado without a physician's full time services.

2. Colorado Medical Society, for its members, is in the forefront in helping physicians stay abreast of the fast-changing medical sciences. Rural practice physicians are afforded continuing medical education opportunities by accredited CME delivered in local rural hospitals; however, the demands made on the rural physician do not allow him/her the luxury of continuing medical education on the same level as the urban practitioner.

3. Colorado Medical Society and each of its component (county) societies conducts an accessible and effective grievance system. Physician and patient alike have the opportunity to use this grievance system with any allegation of poor or improper care on the part of a physician member of CMS. The grievance procedure provided by CMS physicians is available to all Coloradans; the Colorado Medical Society Grievance Committee is possibly the first state agency to which any such grievance or complaint should come.

4. Colorado physicians, through their local committees, contribute enormous amounts of volunteer time serving on local and statewide committees associated with health care standards in pharmacy, alcohol and drug abuse, public safety and environment, public health issues covering the broadest range possible, including the Emergency Medical Services Committee.

5. For the past 13 years, the Colorado Foundation for Medical Care has conducted professional standards and peer review through five regional offices all across Colorado. These offices have closely monitored the admission, treatment and release of patients in an effort to protect quality health care standards in all aspects of medical treatment and health care.

6. Colorado Medical Society has, for a number of years, supported legislation which would protect the medically indigent in Colorado, estimated in 1982 at approximately 365,000. The newspaper series points out that there are medically indigent counties in Colorado which can not support necessary emergency services. CMS is working with many groups and agencies to make needed changes.

In summary, the physicians of Colorado share the health concerns of all people of Colorado. Colorado physicians continually work toward the betterment of public health, the welfare of the medical profession and the patients it serves, and promote the science and the art of medicine. No person, even the devoted medical doctor, can long enjoy a life of the telephone ring or the knock on the door at any time, 24 hours a day, feeling that he is the only guardian of the public health in rural Colorado.

The investigation and series of articles missed an excellent opportunity to find solutions to the problems of rural health delivery. If the investigators and/or writers had been committed to finding solutions, rather than recreating long-standing problems and referencing many outdated incidents of alleged poor practice, they would have created a coalition of community leaders, citizens, physicians, other health care professionals, the Colorado Medical Society, the Colorado Hospital Association, the Department of Health and Board of Medical Examiners. They would have urged the Office of the Governor and Colorado's many state legislators to join County Commissioners and other elected officials in seeking out the answers or alternatives which are both cost-effective and efficient. Certainly, the Colorado Medical Society membership continues to pursue these objectives.

Merlin G. Otteman, MD, President  
Colorado Medical Society

HMSS makes the home an alternative to the hospital for continuing I.V. therapy.

# Home Coming

If maintenance I.V. therapy is the reason for keeping a patient in the hospital, physicians now have the option of directing the services of HMSS. HMSS will administer the physician's prescribed treatment in the comfort, privacy, and convenience of the patient's home. HMSS can administer I.V. antibiotic therapy, chemotherapy, and hyperalimentation (either intravenously or orally). There are two reasons for a physician to recommend the services of HMSS: cost and care.

**Cost.** When compared with receiving the same treatment in a hospital, HMSS can reduce the cost, in

many instances, by as much as 50 percent.

**Care.** It is generally accepted that patients experience a better quality

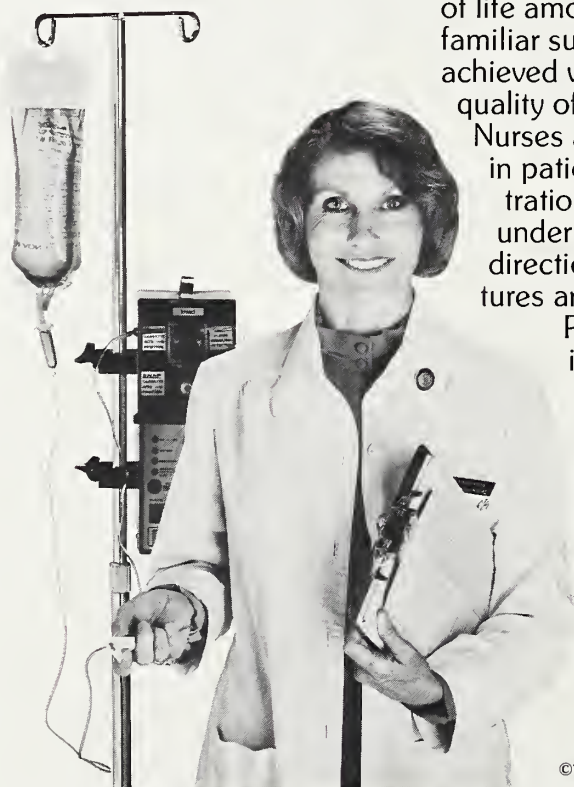

of life among family, friends, and familiar surroundings. This can be achieved without compromising the quality of care. HMSS Registered Nurses are trained and experienced in patient care and I.V. administration. HMSS nurses work strictly under the attending physician's directions. In addition, all admixtures are prepared by Registered

Pharmacists with experience in centralized hospital intravenous admixture services.

Cost and care. Two compelling reasons for a physician to learn more about HMSS, its services, and its people.

We welcome your inquiry.

**This Month's Cover** features incoming President John A. Whitesel, III, MD, and his family. From left to right are his son, John IV (Jay); grandson, John V (BJ); daughter-in-law, Marilyn; grandson Charles; son Steven; his wife Liz, and Dr. Whitesel. Dr. Whitesel is profiled on p. 179; his column is on p. 276.

The tea-and-gossip image of medical auxiliaries is dispelled by CMSA President Sharon Ritzman and President-elect Bunkie Inkret, who see the Auxiliary as an active, community-oriented service organization. The interviews begin on p. 283.

On p. 271 outgoing President Merlin G. Otteman, MD, sums up an active and productive year in office.

Premenstrual Syndrome, long a problem for many women, has become a popular topic of discussion and treatment of late. The current drug therapy for this syndrome is discussed on p. 290.

President, Colorado Medical Society

## The Colorado Medical Society — 1982-83

The medical society year ended this year with the Annual Meeting in Tamarron. With this writing I would like to summarize the year's activities as I see them. This was a very busy year for the Colorado Medical Society. Most of the councils were busy, particularly the Council on Socio-economics, which met monthly because so many things were happening in this area.

Cost containment was emphasized throughout the year with

passage of the cost containment guidelines by the House of Delegates at the Interim Meeting. Government programs including Medicaid and programs for the medically indigent occupied much of the time of the Council on Socio-Economics. The primary care program for Medicaid was implemented by the Colorado Department of Social Services. Lack of adequate funding by the state legislature for Medicaid continued to be a constant aggravation to the physicians in Col-

orado, culminating in no payments for the last month of the fiscal year.

The Council on Legislation has also been very active as a result of more than 50 health care bills which were introduced into the state legislature. Battles were won and lost in this area. The pressure from other health care groups to intrude into medical practice was again present. COMPAC has continued to grow as more Colorado physicians realize that this effort does make a difference in influencing their state representatives.

The Colorado Medical Society is now approved to give continuing medical education credits throughout the state. This approval was achieved after much effort by the Council on Professional Education, including time and effort involved in documentation and a site visit by the approving authority. This council was deeply concerned, as was all of CMS, about the reassignment of Dean Roy Schwarz of the University of Colorado School of Medicine because of his close working relationship with organized medicine. His interest in the student loan program

## ADVERTISEMENT

Nominations and applications are invited for the position of Dean of the School of Medicine at the University of Colorado.

The Dean is the Chief executive officer of the Medical School who is directly responsible to the Chancellor of the University of Colorado Health Sciences Center.

Responsibilities include the development and maintenance of quality educational, clinical practice, and research programs, the promotion of excellence in scholarly activities, and leadership in academic policies and in developing new programs. In addition, the competent administration of budgetary matters pertaining to education, research, clinical, and faculty affairs is required.

Qualified candidates must have either an M.D. or a Ph.D. degree with administrative experience comparable to that as a chairperson of a department in a School of Medicine and as an active investigator in original research endeavors.

All interested candidates and nominations should include a copy of their curriculum vita and a list of five references to be submitted no later than December 1, 1983, to the following:

Dr. Edgar L. Makowski  
Chairman, Search Committee for Dean  
of the School of Medicine  
Box A-077  
4200 East Ninth Avenue  
Denver, Colorado 80262

The University of Colorado is an Equal Opportunity/Affirmative Action Employer.

## Rehabilitation Groups of the American Cancer Society

### Reach to Recovery

Reach to Recovery is a rehabilitation group for women who have had breast surgery. It is designed to help them meet their physical, psychological, and cosmetic needs. Volunteers, who have been selected by their doctors and have completed training, visit the patients in the hospital with the physician's approval. No medical advice is given but compassion and emotional support are available.

# Give yourself an **ANALGESIC** and take two of the best:

**Fast and effective pain relief for  
the office management headache!**

being developed by CMS is appreciated.

The Council on Public Health has developed position papers on urban air pollution, the dangers of kerosene heaters and smoking policies within CMS.

Most active under the Council on Professional Relations and Medical Service were the Pre-Hospital Care Physicians Advisory Committee and the Emergency Medical Care Committee. The latter committee toured Rocky Flats to examine the plant's emergency preparedness and disaster plan. The committee is continuing to focus on possible Colorado

disasters and on preparing guidelines based upon on-site team approaches for such disasters.

The COPIC Trust finished its first year as an insuring entity in fine shape. Thanks to the support from the CMS physicians, the first year enrollment (June 1982-June 1983) and premium goal of more than \$7.6 million has been met. By developing competition in professional liability insurance in Colorado, COPIC has saved all physicians money by keeping premium increases to a minimum. The preferred risk program will be introduced this year to COPIC members, with additional savings to those who qualify.

Ground was broken for the Colorado Medical Society building this summer. This structure now taking shape will ultimately house the sister organizations of CMS and serve as a focal point for medicine in Colorado. Many of our members have spent numerous hours in this effort.

Lastly, in September of this year the status of rural health care in Colorado was dramatized by a series published in the Rocky Mountain News. The medical society responded to this slanted review by pointing out the many problems inherent to small-town practice and by offering suggestions to improve health care in these isolated areas.

The administrative staff provided professional support throughout the year. There has been some change in personnel and every effort has been made to build a capable, cooperative staff for CMS.

## Soc Trang — A Vietnamese Odyssey

*Author: Carl E. Bartecchi, MD, of Pueblo, Colorado*

Dr. Bartecchi was born and raised in Scranton, Pa., and graduated from the University of Pennsylvania Medical School. His internship and residency in the field of internal medicine were both at Henry Ford Hospital in Detroit. In 1965 he entered the U.S. Army as a Flight Surgeon. He served at Soc Trang with a unit that supported the Vietnamese Army in the Mekong Delta. He founded the Soc Trang Clinic and the Airmobile Clinic. He was award-

ed numerous decorations and commendations from American and Vietnamese military and civilian sources. Following his return to civilian life, Dr. Bartecchi became one of the founding partners of the Southern Colorado Clinic in Pueblo. He is an associate clinical professor in the Department of Medicine of the University of Colorado School of Medicine, and a Fellow of the American College of Physicians.

*Soc Trang — A Vietnamese*

Odyssey, is a real story, simply told in terms understandable to all. It is a tragic story which gives off only a glimmer of hope through the misery, loss and the purposeless frustrations of war. Throughout the story that tiny glimmer is kept alive by the caring and devotion of a humanitarian who has become a tool of war. Thus: the odyssey; a story of a group of people who were thrown together because of conflict, and how they turned their lives to attempting to help victims of the war.

One of the most touching elements of the story is about the Soc Trang Orphanage and how Western medicine and caring brought the tiny children "from near death to life." American soldiers poured much of their off-duty time, efforts and heart into helping Mother Bruno and her brave nuns save the lives of the malnourished, diseased war orphans, some of them only one day old, and none older than three years. The orphanage was only one of numerous ways in which American GIs reached out to help the Vietnamese: the mobile clinic, the medical airlift for civilian victims, among others. When the medical staff at Soc Trang weren't caring for the battle wounds of U.S. and South Vietnamese troops, they were helping people in need.

### "Many Americans know nothing of this struggle."

Viet Nam is far enough behind us now that, as one reviewer pointed out, many American children know nothing of this struggle and our country's part in it. It is time that Americans who were not there know why so many other Americans were, and what they were doing. *Soc Trang — A Vietnamese Odyssey*, brings it all to your own home and hearth. If, after reading this account, you still cannot take pride or have confidence in what the United States did in this faraway military struggle, you will doubtless find refuge in what our medical knowledge and many members of our medical profession did for the first victims of the struggle — the Vietnamese people.

As I approach the end of my 18 month term as Colorado Medical Society Auxiliary President, I have many thoughts and emotions.

I feel even more strongly than I did when I took office about the potential and importance of the medical auxiliary in dealing with the problems and challenges facing organized medicine today. If medical societies will seek the help of their auxiliaries, I think they will be amazed at what they can accomplish. These auxiliaries are composed of well-educated, intelligent spouses who care as much about the future of medicine as the physician. In this past year they have increased AMA-ERF contributions by 40 percent, raising \$23,222.19; they have formed both a malpractice support group and an impaired physician family support. They have also published a brochure for physicians and spouses about malpractice suits, to mention just a few of the auxiliary's accomplishments.

One of my biggest frustrations has been the lack of support of some physicians and their feeling that the auxiliary is "just a social group." I do

## auxiliary report

Sharon Ritzman, President,  
Colorado Medical Society Auxiliary

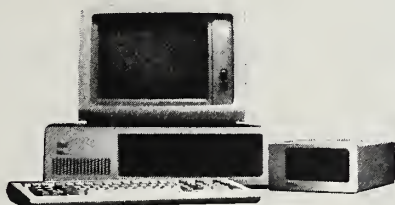

hope these same physicians have taken the time to read my previous columns which describe auxiliary projects and programs. Certainly Drs. Otteman and Whitesel have been most supportive and helpful, and I thank them.

It is difficult to express enough gratitude to all of the hard-working auxiliaries across the state who have accomplished so much and helped fulfill our purpose "to improve the quality of life through health education and services." The state officers and committee chairmen, who also served 18 month terms, have given

me more help and support than I ever dreamed possible. They certainly deserve the credit for the successes we have had.

It has been said that "the highest reward for a man's toil is not what he gets for it, but rather what he becomes by it." I thank all of you for the fantastic opportunities of this past year and a half.

## Pueblo Medical Community and CF&I Show the Way

The Colorado Foundation for Medical Care (CFMC) and CF&I Steel Corporation (CF&I) have completed a second successful year of hospital review. In the first review year (April 1981 through March 1982) the review program achieved a reduction in average length of stay of about 0.8 days resulting in a total reduction of greater than 3,000 patient days with an estimated cost savings of \$800,000. The average length of stay for CF&I's health plan beneficiaries was reduced in the sec-

ond year of review by an additional one-half day saving over 2,800 patient days and over \$1.5 million based on current hospital per diem charges.

The Colorado Foundation for Medical Care's hospital review program stresses the importance of local physician initiative through its five Regional Councils. These Regional Councils are entrusted by the Colorado Foundation for Medical Care Board of Directors with the respon-

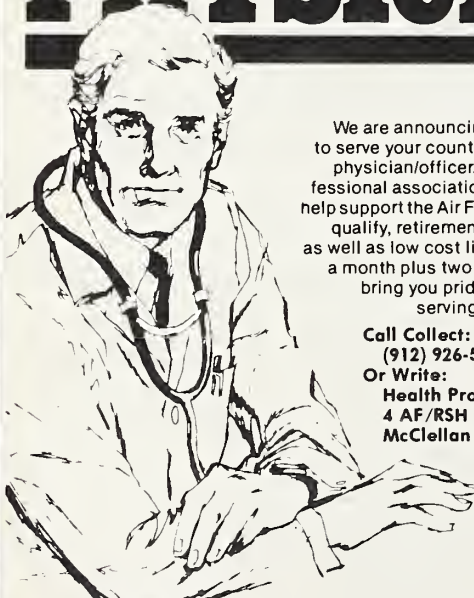

sibility for appropriate medical peer review within their respective regions. In the second year of review the Region IV Council in Pueblo worked with more than 150 physicians in the Pueblo area and utilized more than 20 physician advisors in the CF&I review program. Physician advisor involvement included physicians from medical specialty areas as well as primary care physicians to assure that review was performed by true peers. The Regional Council also received cooperation and assistance from physicians outside of the Pueblo area in their efforts to provide intensive and objective peer review.

The Pueblo experience has been a positive one due to several unique features including:

- A high level of support from business and labor
- Excellent cooperation from hospital administration and medical staffs in facilitating changes
- Availability of good baseline information on hospital utilization from CF&I
- The use of a problem-oriented approach which concentrates resources on correcting identified problems.

The control of health care costs can only result from cooperation among patients, physicians, hospitals, business and third-party payers with real commitment to change. The Pueblo medical and business communities in concert with the Colorado Foundation for Medical Care have demonstrated that efficiency in hospitalization can be attained without negatively impacting the patient.

# PHYSICIANS

## Potpourri

On the 25th of August, President Otteman and I met with the regional council chairmen of the Colorado Foundation for Medical Care in an attempt to resolve the concerns voiced at the CMS Interim Meeting in regard to the Foundation. The common denominator in the reference committee report seemed to be communication. In an attempt to improve communication from the Foundation, there will be a summary of current Foundation issues, developments and their significance included in the *CM Scanner* and presented in a *Colorado Medicine* column. Also, component society presidents will be asked to give a few minutes to Foundation information at each component society meeting.

These communications will have more and more bearing on your practice when Diagnosis Related Groups are implemented October 1 for Medicare and the Colorado Foundation for Medical Care becomes the peer review organization to oversee this program throughout the state. (See *Colorado Medicine* July, 1983, p. 175). If you have comments or suggestions upon receiving the Foundation communications contact your regional council members or CFMC Board members. Stay informed on Colorado Foundation for Medical Care affairs.

Goals for 1983-84 arising from the President's Planning Session held in June were presented to the August Board of Directors meeting. These goals were:

1. **Political Effectiveness** — encourage one-on-one involvement on the local level with legislators; have

component societies meet with their state and national representatives; continue the Key Man Program and attempt year-round contacts instead of just during campaign periods.

2. **Competition in the Market Place** — Develop a program to show membership competitive models that are in place or contemplated and their implications. Assist membership and the components with advertising and marketing programs.

3. **Public Health** — Emphasize the day-to-day health issues that involve the citizens of our state.

4. **Organizational Effectiveness** — Identify and expand membership services. Establish a membership recruitment and retention mechanism. Make known to Colorado physicians CMS public information and community programs. Send CMS policy manuals to each component.

5. **Hospital Staff Relations** — Past, current and future issues. Establish a forum for hospital staff issues and their solutions. Components to work with hospital medical staffs. CMS to develop a unified program of medical staff/component society/specialty society relationships.

In order to implement these goals (and continue to support those of past years), the following specific recommendations were presented to the Board of Directors and passed:

1. Creation of a CMS **Membership Recruitment and Retention Committee**.

2. Creation of a **Long Range Planning Committee**.

3. Creation of a CMS **Medical Staff**

**Section with representation in the House of Delegates.**

4. Development of a CMS policy on **creation of sources of non-dues income**.

The recommendations and changes described above will serve to strengthen our organization at a critical time when the private practice of medicine needs a strong, organized advocate. Changes are occurring quite rapidly, as we have discussed several times previously. It is imperative that you **be informed** about CMS, Foundation and medical staff affairs. It is imperative that you then **voice your desires and concerns**. Finally, you must participate to keep our organization strong, viable and representative of the private practice of medicine.

# An added complication... in the treatment of bacterial bronchitis\*

**Brief Summary.** Consult the package literature for prescribing information.

**Indications and Usage.** Cefaclor\* (cefaclor, Lilly) is indicated in the treatment of the following infections when caused by susceptible strains of the designated microorganisms:

Lower respiratory infections, including pneumonia caused by *Streptococcus pneumoniae* (*Diphtheria pneumoniae*), *Haemophilus influenzae*, and *S. pyogenes* (group A beta hemolytic streptococci). Appropriate culture and susceptibility studies should be performed to determine susceptibility of the causative organism to Cefaclor.

**Contraindication.** Cefaclor is contraindicated in patients with known allergy to the cephalosporin group of antibiotics.

**Warnings.** IN PENICILLIN SENSITIVE PATIENTS, CEPHALOSPORIN ANTIBIOTICS SHOULD BE ADMINISTERED CAUTIOUSLY. THERE IS CLINICAL AND LABORATORY EVIDENCE OF PARTIAL CROSS-ALLERGICITY OF THE PENICILLINS AND THE CEPHALOSPORINS AND THERE ARE INSTANCES IN WHICH PATIENTS HAVE HAD REACTIONS, INCLUDING ANAPHYLAXIS, TO BOTH DRUG CLASSES.

Antibiotics, including Cefaclor, should be administered cautiously to any patient who has demonstrated some form of allergy, particularly to drugs.

Pseudomembranous colitis has been reported with virtually all broad-spectrum antibiotics (including macrolides, semisynthetic penicillins, and cephalosporins); therefore, it is important to consider its diagnosis in patients who develop diarrhea in association with the use of antibiotics. Such colitis may range in severity from mild to life-threatening.

Treatment with broad-spectrum antibiotics alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is one primary cause of antibiotic associated colitis.

Mild cases of pseudomembranous colitis usually respond to drug discontinuance alone. In moderate to severe cases, management should include sigmoidoscopy, appropriate bacteriologic studies, and fluid, electrolyte, and protein supplementation. When the colitis does not improve after the drug has been discontinued, or when it is severe, oral vancomycin is the drug of choice for antibiotic associated pseudomembranous colitis produced by *C. difficile*. Other causes of colitis should be ruled out.

**Precautions.** General Precautions—If an allergic reaction to Cefaclor occurs, the drug should be discontinued, and, if necessary, the patient should be treated with appropriate agents, e.g., pressor amines, antihistamines, or corticosteroids.

Prolonged use of Cefaclor may result in the overgrowth of nonsusceptible organisms. Careful observation of the patient is essential. If superinfection occurs during therapy, appropriate measures should be taken.

Positive direct Coombs' tests have been reported during treatment with the cephalosporin antibiotics. In hematologic studies or in transfusion cross-matching procedures when antiglobulin tests are performed on the minor side or in Coombs' testing of newborns whose mothers have received cephalosporin antibiotics before parturition, it should be recognized that a positive Coombs' test may be due to the drug.

Cefaclor should be administered with caution in the presence of markedly impaired renal function. Under such conditions, careful clinical observation and laboratory studies should be made because safe dosage may be lower than that usually recommended.

As a result of administration of Cefaclor, a false positive reaction for glucose in the urine may occur. This has been observed with Benedict's and Fehling's solutions and also with Clinical® tablets but not with Tes-Tape® (Glucose Enzymatic Test Strip, USP, Lilly).

Broad-spectrum antibiotics should be prescribed with caution in individuals with a history of gastrointestinal disease, particularly colitis.

**Usage in Pregnancy.**—Pregnancy Category B—Reproduction studies have been performed in mice and rats at doses up to 12 times the human dose and in ferrets given three times the maximum human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Cefaclor. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

**Nursing Mothers.**—Small amounts of Cefaclor have been detected in mother's milk following administration of single 800 mg doses. Average levels were 0.16, 0.20, 0.21, and 0.16 mcg/ml at two, three, four, and five hours respectively. Trace amounts were detected at one hour. The effect on nursing infants is not known. Caution should be exercised when Cefaclor\* (cefaclor, Lilly) is administered to a nursing woman.

**Usage in Children.**—Safety and effectiveness of this product for use in infants less than one month of age have not been established.

**Adverse Reactions.** Adverse effects considered related to therapy with Cefaclor are uncommon and are listed below.

Gastrointestinal symptoms occur in about 2.5 percent of patients and include diarrhea (1 in 70).

Symptoms of pseudomembranous colitis may appear either during or after antibiotic treatment. Nausea and vomiting have been reported rarely.

Hypersensitivity reactions have been reported in about 1.5 percent of patients and include morbilliform eruptions (1 in 100), Pruritus, urticaria, and positive Coombs' tests each occur in less than 1 in 200 patients. Cases of serum sickness-like reactions (erythema multiforme or the above skin manifestations accompanied by arthritis/arthralgia and, frequently, fever) have been reported. These reactions are apparently due to hypersensitivity and have usually occurred during or following a second course of therapy with Cefaclor. Such reactions have been reported more frequently in children than in adults. Signs and symptoms usually occur a few days after initiation of therapy and subside within a few days after cessation of therapy. No serious sequelae have been reported. Antihistamines and corticosteroids appear to enhance resolution of the syndrome.

Cases of anaphylaxis have been reported. Half of which have occurred in patients with a history of penicillin allergy.

Other effects considered related to therapy included eosinophilia (1 in 50 patients) and genital pruritus or vaginitis (less than 1 in 100 patients).

**Causal Relationship Uncertain.**—Transient abnormalities in clinical laboratory test results have been reported. Although they were of uncertain etiology, they are listed below to serve as alerting information for the physician.

Hepatic—Slight elevations of SGOT, SGPT, or alkaline phosphatase values (1 in 40).

Hematologic—Transient fluctuations in leukocyte count, predominantly lymphocytosis occurring in infants and young children (1 in 40).

Renal—Slight elevations in BUN or serum creatinine (less than 1 in 500) or abnormal urinalysis (less than 1 in 200).

1061782R

\*Many authorities attribute acute infectious exacerbation of chronic bronchitis to either *S. pneumoniae* or *H. influenzae*.

Note: Cefaclor is contraindicated in patients with known allergy to the cephalosporins and should be given cautiously to penicillin-allergic patients.

Penicillin is the usual drug of choice in the treatment and prevention of streptococcal infections, including the prophylaxis of rheumatic fever. See prescribing information.

# Physicians take note:

## Starting October 1st, a change for the better...Our new payment program

Don Blanchard, President,  
Blue Cross and Blue Shield of Colorado

We're facing up to a hard fact: Our old method of determining maximum allowance to physicians is out of date.

Beginning October 1st, Blue Cross and Blue Shield of Colorado will make payments based on real, prevailing charges for individual procedures.

Overall, our allowance will cover up to 90% to 95% of all physician charges. The great majority of claims will be paid in full.

Already we've speeded up claims processing to improve cash flow. We mail checks direct to participating physicians within 14 days for more than 90% of all claims received.

We think the result will be an increasing number of physicians participating in Blue Shield of Colorado. After all, we have a common goal: to achieve and maintain affordable health care and equitable payment for services. Participation in Blue Cross and Blue Shield of Colorado now has more value to you than ever before.

If you need additional information on our new method of payment, write or call me direct.

## Frontiers of Medicine

Lewis Thomas, MD, will be one of three plenary session speakers at "Frontiers of Medicine," a symposium to be held Saturday, November 19, at the Fairmont Hotel in Denver. Dr. Thomas is Chancellor of the Memorial Sloan-Kettering Cancer Center and well-known author of such best-selling books as *Lives of a Cell* and *Medusa and the Snail*. The one-day symposium will explore the findings of four significant frontiers: the new genetics; growth, development and aging; cancer; and the brain.

The other plenary session speakers will be Francis H.C. Crick, Ph.D, scientist and Nobel laureate, who discovered the structure of DNA in 1953, and Theodore T. Puck, Ph.D, scientist and pioneer in the field of medical genetics.

The symposium has been developed and directed by the University of Colorado School of Medicine and the Wright-Ingraham

Institute. Co-sponsors include the Colorado Division of the American Cancer Society and a number of local hospitals. Colorado Medical Society is among the organizations endorsing the symposium.

Admission to the symposium is \$60.00, lunch included. For more information, call 231-2631.

## Utilization Review Physicians to Meet in Denver

The American College of Utilization Review Physicians (ACURP) will hold its National Educational Seminar October 22 and 23, 1983 in Denver. ACURP is the only organized, physician-directed institute in the country whose sole aim is education in the field of quality assurance, utilization review, risk management and cost containment.

Among the faculty will be Caroline Davis, administrator of the Health Care Finance Administration speak-

## New CMS President to Take Office

On October 15, 1983, John A. Whitesel III, MD, will take office as the 113th elected President of the Colorado Medical Society. "Positive Action" will be the keynote of Dr. Whitesel's term in office. Among his major goals as President are "to make CMS relevant to current medical practice issues, to increase its organizational strength and to create a meaningful pattern of growth for the society."

Dr. Whitesel was born in Cincinnati, Ohio in 1933. He received a bachelor of arts degree from Miami University in Oxford, Ohio in 1954 and his MD degree from the University of Cincinnati in 1958. He came to Denver in 1958 to intern at Denver General Hospital and completed a residency in urology at the University of Colorado School of Medicine in 1962.

He is in private practice in urology in west Denver and is on the medical staff at St. Anthony

Hospital, St. Anthony North, Lutheran Medical Center and Beth Israel Hospital.

He has held numerous positions at both the component and state medical society levels, including membership on the Council on Public Health, Colorado Foundation for Medical Care Region II Council, CFMC Board and CMS delegate from the Clear Creek Valley Medical Society.

Dr. Whitesel is an enthusiastic convert to the Colorado outdoors. He is an avid skier, mountain climber and bicyclist. Other hobbies include travel, gardening and art, including membership in the Denver Art Museum and the Museum of Natural History. He is currently President of the Rocky Mountain Division of the United States Ski Association.

He and his wife, Liz, have three sons (pictured on the cover): John IV (Jay) who is married to Marilyn, Bruce and Steven and are the grandparents of John (V) and Charles Whitesel. The Whitesels make their home in Littleton.

## Grievance Of The Month

Mr. X, in a lengthy letter, complained that Dr. Z, when cauterizing a bleeding point in his nose, had held an instrument "over an open flame," and had caused Mr. X's nasal septum to become perforated.

The Grievance Committee investigated the matter, and determined that, according to Dr. Z's records, silver nitrate was used to cauterize a bleeding point, and he subsequently used electric cautery to cauterize additional bleeding points. The committee discussed this treatment with other ENT physicians, and found that it was appropriate. Dr. Z indicated that the only thing that he might have put "over an open flame" was a nasopharyngeal mirror — in order to prevent clouding of the mirror from condensation of the patient's breath.

In the opinion of the consultants, there can be multiple causes of nasal perforation, including overly vigorous and persistent intranasal cleaning. What all causes have in common is that recurrent or prolonged irritation eventually damages the blood supply and leads to necrosis of the nasal cartilage, followed by perforation.

The Grievance Committee concluded that the complaint was unjustified, and that Dr. Z did not cause Mr. X's nasal perforation.

ing on "Medical Cost Control," Arthur B. Laffer, of the University of Southern California speaking on "Economic Trends as They Impact Practicing Physicians," and Kenneth A. Platt, MD, the Foundation's Medical Director speaking on "Professional Review Organizations." Emanuel Abraham, MD from the Board of Trustees of the American Society of Internal Medicine will present "DRGs — are they a Doctor's Reimbursement Gamble?" Addi-

## The American Society for Parenteral and Enteral Nutrition

Presents its

### 8th Clinical Congress

January 29-February 1, 1984

Las Vegas, Nevada

The 8th Clinical Congress will offer both basic and advanced information on the delivery of specialized nutrition support, as well as research papers on the latest developments in clinical nutrition. A.S.P.E.N. is approved as a provider of programs offering continuing education credits to physicians, nurses, pharmacists and dietitians.

#### The Congress will include:

**Symposia:** ★ Nutrition and Sepsis ★ Nutrition Support in Pediatrics ★ Use of Special Amino Acid Formulae ★ Prostaglandins in Clinical Nutrition ★ Intravenous Catheter Management ★ Nutritional Repletion ★ Trace Minerals ★ Cost Reimbursement

**Clinical Workshops:** ★ Hyperglycemia ★ Nutrition Product Selection ★ Cyclic Parenteral Nutrition ★ Enteral Feeding Complications ★ Home Parenteral Nutrition and the Pediatric Patient ★ Radiation Therapy and the GI Tract ★ Care of the Patient Requiring Prolonged Venous Access ★ Computers and Nutritional Support Services ★ Pre-operative Nutritional Support ★ Nutrition Therapy in Cancer Patients ★ Outpatient Parenteral and Enteral Nutrition

**Postgraduate Courses:** ★ Introduction to Clinical Nutrition ★ Care of the Patient with an Eating Disorder ★ Clinical Gastroenterology ★ Metabolic Monitoring of the Nutritionally Supported Patient ★ Pediatric Gastroenterology ★ Home TPN ★ Parenteral Nutrition in Neonates ★ Energy Metabolism ★ Critical Care Support ★ Advances in Enteral Feeding ★ Nutritional Support in Alcoholic Patients

**Plus:** ★ Scientific Short Paper Sessions ★ Specialty Sessions for Nurses, Pharmacists and Dietitians ★ Roundtable Discussions ★ Poster Sessions ★ Exhibits ★ Cinema

The American Society for Parenteral and Enteral Nutrition

### CMS Sponsors Management Workshops for Physicians

The Colorado Medical Society is sponsoring a series of medical practice management workshops presented by Conomikes Associates, Inc., noted experts in the field. They will be held November 8-11, 1983, in the Humphrey's Lounge, Denison Memorial Library, UCSM. Here are the specific dates, times and topics:

#### 1. Personnel Management Techniques

Tuesday, Nov. 8, 8:30 am-noon

#### 2. Personnel Leadership and Communications

Tuesday, Nov. 8, 1:30 pm-5 pm

#### 3. Better Collections, Billing and Insurance

Wednesday, Nov. 9, 8:30 am-noon

#### 4. Reception & Patient Flow Techniques

Wednesday, Nov. 9, 1:30 pm-5 pm

#### 5. Practice Development Techniques

Thursday, Nov. 10, 1:30 pm-5 pm

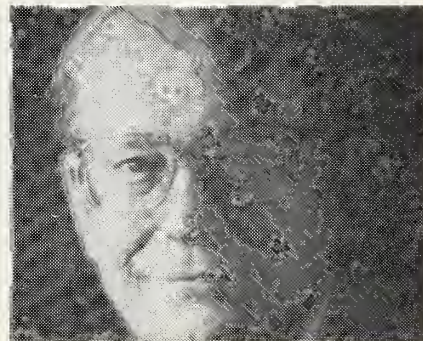

#### 6. Computers in Medical Practice

Friday, Nov. 11, 9:00 am-4 pm  
(one hour lunch break)

Look for our brochure in your mail in the near future. For further information please call Dave Haggerty, Division of Professional Services (303) 321-8590 ext. 216.

### New Finance Director at CMS

Carl Norberg joined the staff of CMS on June 20 as Executive Director of Finance and Operations. Mr. Norberg has almost 20 years of association management experience, including Chamber of Commerce work. His employment history includes the executive vice presidency of two national associations, both located in Denver, the

American Society of Farm Managers and Rural Appraisers and the American School Food Service Association.

He is an Iowa native and served in the U.S. Army during the Korean War. He received a degree in agricultural economics with an emphasis in journalism and psychology.

Mr. Norberg has served on the board and as a vice president of the American Society of Association Executives. He is a past president of the Colorado Society of Association Executives, the Rocky Mountain Association of Meeting Planners International and the Denver Agricultural and Livestock Club.

**Cooper Brothers, Inc:  
Experienced Specialists In  
Medical Facility Development**

Cooper Brothers, Inc. offers physicians a single source of responsibility for the design, financing and construction of superior medical office buildings and clinics. Our design/build technique assures you complete control of costs and scheduling — without

the need to divert attention from your medical practice. But, you don't have to take our word for it. We'll gladly put you in touch with our past clients who will confirm the integrity of our company and the quality of our work.

From your initial meeting with our medical division specialists, you'll have a firm price for your new facility — a price we can guarantee

because of our experience in completing many successful medical facilities. Our

experience also assures that your building will suit your working style, offer energy-efficient operation and low-cost maintenance, while reflecting the unique structural, mechanical and design considerations of highly specialized medical facilities.

# Wherefore the Auxiliary?

---

**Editor's Note:** *The Colorado Medical Society Auxiliary was founded as an affiliate of the Colorado Medical Society in 1922. Currently, the auxiliary has approximately 1,300 members. Historically, the auxiliary has had an active, committed group of members. Colorado Medicine's publications editor Sheila Swan recently interviewed the auxiliary president, Sharon Ritzman, and president-elect, Bunkie Inkret, about their goals as auxiliaries, the strengths and weaknesses they perceive in the auxiliary and the directions they hope to see in future for the auxiliary.*

---

Sharon Ritzman joined the auxiliary shortly after she and her husband moved to Colorado, some years ago. Her reason for being an auxiliary at the time, she said, was simply to meet people. However, community involvement soon became the keynote of the auxiliary for her.

Despite the "tea and crumpets" image the auxiliary has had in the past, the auxiliary is not a socially-oriented "wives' club," Mrs. Ritzman said. A number of the auxiliary members are careerists; some, in fact, are quite prominent in their own fields. Among the membership are a state senator (Claire Traylor) and a U.S. District Court judge (Joyce Steinhart). Additionally, there are currently two male auxiliaries, a situation that may not be uncommon in the future as more and more women become physicians.

According to Bunkie Inkret, "in many respects, the auxiliary has been a support group for me and many of the members." But she agreed with Mrs. Ritzman that the major thrust of the organization is and should continue to be community involvement. During the past year, Mrs. Ritzman noted, the auxiliary has been involved in a wide range of community activities statewide. Programs have included vision and scoliosis screening in Pueblo and health education projects, including a project to educate

the public about child safety restraints in cars in Montrose. In Larimer County, the auxiliary raised \$5,000 for the Poudre Valley Hospital Foundation. Many auxiliaries have scholarship and loan funds.

On a state level, the auxiliary established support groups for spouses and families of impaired physicians and for families of physicians who are involved in malpractice lawsuits. The auxiliary, in cooperation with COPIC, recently produced a brochure which answers many of the questions both spouses and physicians have about malpractice lawsuits. (This brochure was mailed to all CMS members in the September issue of *Colorado Medicine*. Additional copies are available from the auxiliary.)

The auxiliary also raised approximately \$23,000 through the AMA-ERF (Educational Research Foundation). These monies will go to medical schools in the form of undesignated funds.

In its community activities, Mrs. Ritzman commented, the auxiliary has tried to change the not so uncommon public belief that physicians are out "only for their own good." Image-building for the medical profession is one of the important functions the auxiliary performs, "making the public aware that physicians and spouses are involved in community issues of

public health." Mrs. Inkret commented that the auxiliary should be actively involved in educating the public about the realities of practicing medicine, "in particular the political and economic factors that affect physicians." "The public should have a better understanding of why medicine is practiced the way it is today," she said.

The biggest problem with which the auxiliary is faced, both Mrs. Ritzman and Mrs. Inkret agreed, is membership recruitment. Only 1,300 spouses belong to the auxiliary, out of a medical society membership of 4,500. The question of why membership is low is not an easy one to answer, according to Mrs. Ritzman. In some instances, the problem is one of communication. Many physicians simply have not taken the time to investigate the auxiliary, she said.

However, in a recent recruitment effort, 200 letters were sent to spouses of physicians in areas where no organized auxiliary exists. Not one response was received.

One facet of the problem is that so many spouses now work outside the home, Mrs. Ritzman said. Many career-oriented spouses feel they don't have the time to devote to a volunteer organization. However, she noted, even if an auxiliary member doesn't have time to be actively involved, her (or his) dues will help provide the money for projects the auxiliary would like to support.

Aside from attracting career spouses, both female and male, the auxiliary also has to deal with the often frivolous image of the "volunteer." American society traditionally has not recognized the value of volunteer labor. Yet, "government cutbacks in funding of social and health programs make volunteerism even more important," Mrs. Ritzman commented.

Additionally, the medical society has not always been entirely supportive of the auxiliary, she said. "The medical society, as well as society at large, should recognize its own need for volunteer help."

Mrs. Inkret commented that "physicians have to realize the value of the auxiliary. It is up to them to educate their spouses." Personal contact, she believes, is the best way to increase auxiliary membership,

*Sharon Ritzman, President, Colorado Medical Society Auxiliary*

*Bunkie Inkret, President-elect, Colorado Medical Society Auxiliary*

both from the auxiliary and the physician membership.

Although Mrs. Ritzman said she has enjoyed her term in office, it has been a long haul. Because last year the auxiliary changed the date on which they elect officers to coincide with medical society elections, she has been in office for a year and a half instead of the usual one-year term. However, ending her term in office will not mean a retirement from auxiliary involvement. She will continue to work with the auxiliary on a state and national level. She has been appointed to the AMA

Health Projects Committee with her area of concern being child abuse. She has become actively involved in projects relating to this grave social problem.

During her upcoming year as CMSA president, Mrs. Inkret hopes to emphasize health education programs, particularly in the areas of alcohol and drug abuse and prevention of sports injuries. The importance of family life is another major area of concern. As the mother of five children, wife to a physician and activist in many organizations, Mrs.

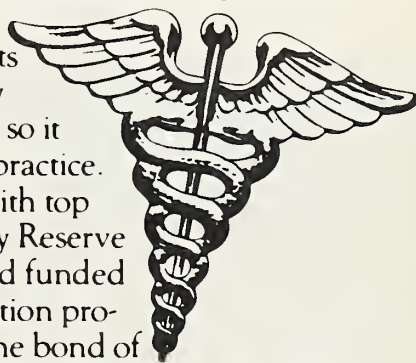

Inkret has experienced the difficulties of juggling many roles. "You really have to work at balancing being a wife and mother with a career," she commented. But, she added, "men, too, have to be husbands and fathers," as well as devoting themselves to a career.

Despite the demands of a physician's career, and because of the prominent role they play in the community, "physicians and their families can and should set an example of family life," Mrs. Inkret concluded.

## CARE FOR YOUR COUNTRY.

As an Army Reserve physician, you can serve your country and community with just a small investment of your time. You will broaden your professional experience by working on interesting medical projects in your community. Army Reserve service is flexible, so it won't interfere with your practice.

You'll work and consult with top physicians during monthly Reserve meetings. You'll also attend funded continuing medical education programs. You will all share the bond of being civic-minded physicians who are also commissioned officers. One important benefit of being an officer is the non-contributory retirement annuity you will get when you retire from the Army Reserve. To find out more, simply call the number below.

## ARMY RESERVE. BE ALL YOU CAN BE.

# Hubert Work

by James J. Delaney, Jr., MD, Historian, Colorado Medical Society

Perhaps the best-known physician/politician in Colorado was Dr. Hubert Work. He was the only Colorado president of the American Medical Association, a member of two presidential cabinets, a one time presidential candidate himself, chairman of the Colorado and National Republican parties and chairman of Herbert Hoover's presidential campaign committee.

Dr. Work was born in Marion Center, Pennsylvania, on July 3, 1860. After studying at the Indiana State, Pennsylvania Normal School, he enrolled in the medical department of the University of Michigan,

where he studied for three years. In those days there were free-standing proprietary medical schools, some with university affiliation and some without it. The study of medicine in major universities was usually conducted through a department.

Dr. Work received his MD degree from the University of Pennsylvania in 1885 and moved to Greeley, Colorado to open his practice. Within a few months he moved on to Fort Morgan to practice. He soon became friends and worked closely with Dr. J.N. Hall, who was then practicing in Sterling. The two of them provided all the medical care

for northeastern Colorado for several years.

Fort Morgan and Sterling were on the main railroad line between Denver and the eastern United states, so there were several daily trains that ran north and south through the two towns. Dr. Hall and Dr. Work worked out an arrangement for the care of patients between the two towns. If a call came in for a doctor, it depended on which train was due to arrive next as to which physician took the call. If an eastbound train was due next, Dr. Work went out, whereas if a Denver-bound train was due, Dr. Hall took the call.

Dr. Hall, in his *Tales of Pioneer Practice*, relates a story of how one year, three sets of twins were due to be born; all the calls came in when an eastbound train was expected, so Dr. Work attended all three deliveries.

Another story is told about a life insurance examination the two physicians conducted on each other. They each took a train and met on a cattle siding to examine each other. Dr. Work's blood pressure was too high and Dr. Hall's pulse was too slow for either of them to pass the exam, so Dr. Work lay down by the tracks and Dr. Hall ran up and down along the tracks for awhile. Upon reexamining each other, they both passed the exams and returned home on separate trains. It should be noted that only term life insurance was written in those days and that both men survived into old age.

Not much has been recorded about Dr. Work's practice in Fort Morgan. However, during this time he developed an interest in

psychiatry and mental diseases. During the 1890s he moved to Pueblo and established the Woodcraft Hospital and Sanitarium in 1896. Woodcraft survived into the 1960s when it was converted into a nursing home. Patients are still cared for at the facility, which is now called Shar-mar Nursing Home.

It is apparent that Dr. Work was a charismatic organizer. He was elected the 25th president of the Colorado Medical Society at the age of 33 in 1894. He was one of the first effective presidents of the State Board of Health. Additionally, he was active in national medical as well as governmental politics. In 1908 he was a delegate at large for the Republican National Convention. Dr. Work was elected the first speaker of the AMA House of Delegates and served as president of the AMA in 1921.

At about the same time he was delivering his acceptance speech as president, the famous Pueblo flood was damaging his Woodcraft Hospital. He did not mention his personal misfortune at the time.

Between 1876 and 1912, United States senators were elected by the State General Assembly. 1913 was the first year they were elected by popular vote. In 1914, Dr. Work was one of the Republican candidates for the Senate, losing by a narrow plurality in the primary. Democrats were generally successful that year as a result of the division within the GOP to form the Progressive Party. The latter was soon to lose the support of its major instigating force, Teddy Roosevelt. He was a presidential candidate in 1920, purportedly leading in the first few ballots, but subsequently losing out to Warren Harding.

In 1921 President Harding appointed Dr. Work First Assistant Postmaster General. He made many administrative and economic changes at the time, including transferring ownership of all post-offices to the Federal Government. He was appointed Secretary of the Interior by President Harding on March 5, 1923. He replaced Secretary Albert B. Fall, who resigned in the wake of the Teapot Dome Scandal.

Dr. Work served as Secretary of the Interior for both Presidents

Harding and Coolidge, resigning in 1928 to head up Herbert Hoover's successful presidential campaign. As Secretary of the Interior, he is supposed to have improved relations and services to the Indians and promoted reclamation projects.

Even though his main professional interest was in psychiatry, Dr. Work contributed much to the improvement of public health in Colorado. Prior to becoming president of the State Board of Health, during the late 1890s, he had fought for the pasteurization of milk to prevent the spread of tuberculosis. Koch had convincingly shown that tuberculosis was a communicable disease more than ten years previously, but there were still many reputable physicians who doubted this. Under Dr. Work's presidency, the board of health secured an adequate budget and was able to institute and enforce many of the state's health laws.

Dr. Work married Laura M. Arbuckle in 1887. They had three children, Philip, Dorcas and Robert V.H. Philip followed in his father's footsteps as a psychiatrist. His first wife died in 1924. He remarried, to

Ethel Reed Gano, widow of the prominent Denver merchant, in 1933.

Dr. Work volunteered for service in World War I and rose to the rank of colonel while working for the Provost Marshal General. He later remained active in veterans' activities.

He belonged to numerous professional, political and fraternal organizations, many of which he chaired. He also received many honorary and professional degrees and awards.

Upon the election of President Hoover, he retired to the life of a country gentleman and "elder statesman" in Englewood. He remained active in CMS and state politics until his death in December, 1942.

Dr. Work's most recent honor was achieved in 1963, when *Postgraduate Medicine* selected him as the outstanding physician of the past from Colorado. A large portrait of Dr. Work was donated to CMS and currently hangs with portraits of other well-known Colorado physicians in the lobby of the old Denver Medical Society library foundation building.

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

- Registered nurses
- Lic. prac. nurses
- Certified nurse aides
- Orderlies
- Home health aides
- Housekeepers
- Companions
- Live-in personnel
- Hosp. private duty

APPROVED FOR MEDICARE • PRIVATE INSURANCE

**MEYER CARE**  
Health Services

24-hour service, 7 days a week. Since 1967.

3333 S. Bannock St., Englewood, Co. 80110

**762-8444**

Serving the entire Denver area.

# Drug Therapy Questions and Answers

*This column is designed to provide Colorado physicians with specific answers to commonly-asked questions regarding drug therapy. The column is prepared by the Rocky Mountain Drug Consultation Center in Denver. All questions appearing in the columns have been generated from calls received by the center from physicians and other health professionals.*

*Physicians are encouraged to call the center at 893-DRUG in the Denver metro area or 1-800-332-6475 outside the metro area in Colorado for specific answers to any drug therapy questions, including adverse drug reactions, drug interactions, drug therapy of choice, investigational drugs, drug use in pregnancy, drug dosing in renal and hepatic failure and drug investigation. The center is open from 8:00 a.m. to 5:00 p.m. Monday through Friday with 24 hour on-call service.*

*The director of the center is Dennis R. Sawyer, Pharm.D., Assistant Professor of Medicine, University of Colorado Health Sciences Center. Medical Director is Earl W. Sutherland, MD, Ph.D, Assistant Professor of Medicine, UCHSC. The article on rectal antiemetics in children was written by Susan C. Smolinske, BS, R.Ph. The article on premenstrual syndrome drug therapy was written by Kaye Rathmann, BS, R.Ph.*

## Rectal Antiemetics in Children

### Question:

What is the preferred rectal antiemetic for use in young children?

### Answer:

There are few indications for the use of antiemetics in pediatrics. Primary indications are the treatment of motion sickness, chemotherapy and radiation-induced

emesis. Nausea and vomiting due to gastroenteritis is best treated conservatively through dietary manipulation (Katcher et al, 1982). For severe life-threatening vomiting, phenothiazine derivatives may be indicated. The choice of a particular antiemetic is based on efficacy, toxicity and available dosage forms. Suppositories are available for chlorpromazine, promethazine, pro-

chlorperazine and trimethobenzamide. Doses are summarized in Table 1. Extrapyrimal symptoms and dystonias are the most common limiting adverse effects. Dystonias are more common with prochlorperazine than with the other three drugs. In four studies using prochlorperazine for psychiatric disorders, the incidence of dystonia was over 50 percent (Carter, 1959; May, 1959; Freed & Frignito, 1961; Adelson & Epstein, 1962).

Chlorpromazine produced mild Parkinson's syndrome in 10 percent of children receiving higher doses for severe emotional disorders, but dystonias were rare (Hunt et al, 1956). No information is available on the incidence of dystonias with antiemetic doses. Continuous convulsions were reported in a 20 month old after receiving several suppositories for vomiting (Shaw, 1958). Seizures have also been reported with prochlorperazine (Nelson, 1959).

Promethazine has a low incidence of dystonias. In patients receiving preoperative sedation, one of 1,194 had a dystonic reaction compared to six of 1,861 receiving prochlorperazine (Miller & Greenblatt, 1976). Trimethobenzamide has a low incidence of adverse effects and no extrapyramidal symptoms were noted in 890 patients treated for nausea (Miller & Greenblatt, 1976).

Prochlorperazine appears to be the most effective antiemetic, followed by promethazine, chlorpromazine and trimethobenzamide. The latter drug appears to be ineffective in most studies and is only slightly better than placebo in others

Table 1 — Antiemetic Suppositories

Drug	Dose	Precautions
Chlorpromazine- Thorazine® 25 mg, 100 mg	1 mg/kg Q 6-8 hours	Generally not in less than 6 months of age unless potentially lifesaving
Promethazine Phenergan® 25mg, 100 mg	(0.52 mg/kg Q 4-6 hours) less than 1 year, 5-10 mg 1-5 years, 10-15 mg 6-12 years, 15-25 mg	Do not use in premature or neonates
Prochlorperazine Compazine® 2.5 mg, 5 mg, 25 mg	(greater than 10 kg, 0.4 mg/kg/day TID-QID) 20-29 lbs, 2.5 mg 1-2 times/day (max 7.5 mg/day) 30-39 lbs, 2.5 mg BID-TID (max 10 mg/day) 40-85 lbs, 2.5 mg TID or 5 mg BID (max 15 mg/day)	Generally not used under 20 lb or less than 2 years of age unless potentially lifesaving
Trimethobenzamide Tigan® 100 mg, 200 mg	(15 mg/kg/24 hours TID-QID) less than 30 lbs, 100 mg TID-QID 30-90 lbs, 100-200 mg TID-QID	Do not use in premature or neonates

(Bardfeld, 1966; Miller & Greenblatt, 1976). In a study of 49 pediatric patients one to 17 years of age, trimethobenzamide 200 mg was no more effective than placebo in controlling vomiting (Ginsburg & Clahsen, 1980).

### Conclusion:

Promethazine and chlorpromazine appear to be effective, well-tolerated antiemetics in children with the least serious adverse effects. Prochlorperazine has an unacceptably high incidence of severe dystonic reactions. Trimethobenzamide is ineffective and has no place in the therapy of vomiting at this time.

## Premenstrual Syndrome — Drug Therapy

### Question:

Is there any drug that is effective in controlling PMS symptoms?

### Answer:

Premenstrual syndrome (PMS) affects approximately 40 percent of women and encompasses a wide range of symptoms which can be mildly annoying to incapacitating. Typically, a patient with severe PMS will complain of breast tenderness and swelling, weight gain, a bloated feeling, edema of the ankles and headache. Changes in appetite and cravings for sweets or salty foods are common. Psychological changes, as menses approaches, have included feelings of anxiety, depression, fatigue, irritability, lack of concentration, or intense aggression (O'Brien, 1982; Reid & Yen, 1981). The diagnosis of PMS is dependent on the occurrence of symptoms during the luteal phase of the cycle and absence of symptoms for the week following menses (O'Brien, 1982).

Treatment of PMS has been empirical since the etiology is unknown. Numerous hypotheses have surfaced throughout the years from as early as the 1930s. It was initially believed that PMS was a result of a hormonal imbalance due to progesterone deficiency (Israel, 1938; Backstrom & Mattson, 1975; Morton, 1950); however, this has been unconfirmed by others (Smith, 1975; O'Brien et al, 1980). The response to exogenous progesterones and progestagens has been variable and claims of efficacy have been based primarily on uncontrolled studies (O'Brien, 1982). In two placebo controlled trials, progestins were no more effective than placebo despite significant improvement in both treatment groups (Sampson, 1979; Smith, 1975), suggesting a high placebo effect in patients with premenstrual syndrome. A placebo response has been demonstrated as high as 20 to 80 percent in other studies (Day, 1979a; Haspels, 1980; Mattsson & Schoultz, 1974).

Excessive levels of estrogen were at one time felt to play a part in PMS (Frank, 1931). Vitamin B6 (pyridoxine) gained popularity originally in the 1940s when some animal studies demonstrated that deficiency in the

vitamin seemed to impair estrogen metabolism (Biskind & Biskind, 1943). However, this was not substantiated in human studies several years later (Zondek & Brezezinski, 1948). Renewed interest surfaced when it was found that pyridoxine was a coenzyme for the biosynthesis of dopamine and serotonin which are involved in mood and behavior (Reid & Yen, 1981). It was speculated that estrogen (in menstrual cycle or in oral contraceptives) was capable of inducing a "relative" pyridoxine deficiency, thus leading to behavioral changes noticed in PMS individuals or some contraceptive users (Rose, 1978; Adams et al, 1974). Uncontrolled and controlled studies have generally found the response rate to pyridoxine to be very similar to a placebo response (O'Brien, 1982).

Successful reports (single cases; small uncontrolled studies) in PMS patients using vitamin A have appeared periodically in the literature (Simkins, 1947; Block, 1960; Argonz & Abinzano, 1950). Unsubstantiated hypotheses on its mechanism of action in treating PMS have included a direct antiestrogenic or diuretic effect (Pagani, 1952). In addition, magnesium deficiency has been suggested to contribute to premenstrual symptomatology by selectively causing a depletion of brain dopamine. Abraham and Lubran (1981) reported significantly lower red cell magnesium levels in 26 PMS patients when compared to normal subjects. However, no controlled studies were found in the literature documenting the relief of premenstrual symptoms with magnesium supplements.

Many studies have attributed salt and water retention as the single underlying etiological factor in PMS (Reid & Yen, 1981). There is no good evidence, however, demonstrating that the generalized premenstrual edema noted in PMS patients is due totally to fluid retention. Frequent lack of response of symptoms such as the bloated feeling or breast tenderness to diuretic therapy suggest a local fluid redistribution mechanism at these sites (O'Brien, 1982; Reid & Yen, 1981). Furthermore, there is no consistency between weight gain (a measure of

fluid accumulation) and PMS or weight gain and the severity of premenstrual symptomatology (Reid & Yen, 1981). A variety of diuretics, e.g. ammonium chloride, chlorthalidone, spironolactone) have been reported to be effective in PMS patients. However, most claims of success have had an absence of placebo controls (O'Brien, 1982; Reid & Yen, 1981). The small number of controlled trials available have reported inconsistent results (Mattson & Schoultz, 1974; Jordheim, 1972; Andersch et al, 1978; Werch & Kane, 1976; O'Brien et al, 1979).

In addition, no beneficial effects have been seen in controlled studies using lithium for its diuretic actions (Mattson & Schoultz, 1974; Singer et al, 1974). A causal relationship between water retention and PMS is therefore unlikely.

Bromocriptine has been used in PMS based on limited data (unconfirmed by others) that some patients have elevated serum prolactin levels during the luteal phase (Andersch et al, 1978a; Halbreich et al, 1976). Several studies have shown that it is most effective for the treatment of breast symptoms (Benedek-Jaszmann & Hearn-Sturtevant, 1976; Mansel et al, 1978). Results have generally been variable with other PMS symptoms. Treatment with danazol has produced a similar improvement on breast symptoms in two studies (Day, 1976; Mansel et al, 1979). Despite its mechanism of action as a suppressant of the pituitary-ovarian axis, other typical symptoms of PMS have not improved with its administration.

In the 1960s, studies suggested that oral contraceptives decreased the incidence and severity of PMS (Anon, 1974; Nilson & Solvell, 1962; Means & Grant, 1962). However, evaluation of the literature has demonstrated that despite improvement in some PMS patients with oral contraceptive therapy, others may experience exacerbation of symptoms (O'Brien, 1982; Reid & Yen, 1981).

Other agents used with reported "success" include psychotropic agents (e.g., benzodiazepines, MAO inhibitors, tricyclic antidepressants, meprobamate), prostaglandins inhibitors (Wood & Jakubowitz, 1980) and precursors (evening primrose

oil) (Brusk, 1981) and a combination of drugs such as phenobarbital and ergotamine (Robinson et al, 1977).

There has been some correlation in the literature that the psychosomatic symptoms of PMS may be a manifestation of an underlying psychogenic disorder (Reid & Yen, 1981). Successful treatment of PMS has been reported with psychotherapy alone and in combination with various tranquilizing agents (O'Brien, 1982; Reid & Yen, 1981). The latest hypothesis in the pathogenesis of PMS involves the aberrant release of or sensitivity to neurointermediate peptides, alpha melanocyte stimulating hormones and beta endorphins (Reid & Yen, 1981). Other theories that have evolved include an excess of aldosterone or ADH, hypoglycemia and an allergy to progesterone (Reid & Yen, 1981; Benson, 1980).

#### Conclusion:

The etiology of premenstrual syndrome is unknown but may involved biochemical and/or psychological factors. Variable results have been seen with a multitude of drugs. However, their efficacy is difficult to evaluate due to lack of controls in the majority of studies and a marked placebo effect in PMS patients. The onset of symptoms (somatic as well as psychological) in relation to the luteal phase of the cycle is most important in diagnosis of the syndrome. Treatment is currently empirical and based on symptomatic complaints.

# Reports and Recommendations

## from the Council on Public Health: Kerosene Heaters, Cigarette Smoking, Air Pollution in Colorado

by John C. Selner, MD  
Council on Public Health, Committee on Environment,  
Roger Mitchell, MD, Chairman

### KEROSENE HEATERS

The Committee on Environment of the Colorado Medical Society has reviewed the information available on the use of portable, unvented kerosene home heaters. News reports of a position taken by the Colorado Department of Health in November of 1982 led to adverse publicity with respect to these heaters. Their popularity has been increasing, with attempts to achieve economically more efficient heat within the home.

Two specific risks are identified with the use of these heaters: 1) death or injury related to fire, and 2) the accumulation of indoor air pollutants emitted by the burners. The committee limited its considerations to pollutants produced by these heaters.

Combustion by-products of these heaters include carbon monoxide, hydrocarbons, oxides of nitrogen, and sulfur dioxide. Adequate ventilation is necessary to prevent the accumulation of these chemicals. In order to adequately ventilate, it is necessary to allow the introduction of fresh air from outside the home. In doing so, the advantage of using the kerosene heater is lost. It has been calculated that a window open just ½ inch can lose up to 12,000 btu of heat/hour. The average kerosene heater puts out between 8,000 and 18,000 btu/hour. Individuals more conscious of the heat loss and less conscious of the potential dangers of the accumulating pollutions will opt for closed windows and inadequate ventilation.

The Colorado Department of Health also indicated its concern about the non-availability of high grade kerosene (i.e. K1). Kerosene is graded as K1 or K2. K1 kerosene is

the only fuel rated as acceptable for use in unvented heaters. The use of K2 kerosene can result in accumulation of a significant quantity of sulfur dioxide and hydrocarbons generated by the combustion of this fuel. Confusion exists among kerosene distributors; many are unaware of the fact that there was more than one grade of kerosene, and many do not have any insight as to what grade they had available for sale.

Taking all these matters into consideration, it would appear that the use of kerosene heaters constitutes a health threat and no distinct advantage to the consumer when properly and safely used.

#### Recommendations:

1. That the potential health hazards associated with the use of kerosene heaters be brought to the attention of all physicians.
2. That physicians be encouraged to warn patients about the hazards of such heaters in their homes.
3. That the Colorado Medical Society support the position of the Colorado Department of Health regarding kerosene heaters.

### IMPLEMENTATION OF CMS ANTI-SMOKING POLICY

The Committee on Environment has considered and will continue to consider effective ways to implement the Colorado Medical Society policy which recognizes cigarette smoking as the greatest preventable source of premature disability and death, and fully supports recent findings indicating the hazards of passive smoking.

#### Recommendations:

1. For the already addicted or habitual smoker:
  - a) one on one anti smoking advice in

the consulting room (see Sachs, David, MD, Smoking Cessation Strategies presented at the American Thoracic Society, Annual Meeting, Kansas City, Mo.).

- b) the use of nicotine-containing chewing gum when it becomes available (see Jarvis, M.J.; Raw, Martin; Russell, MAH.; Feyerabend, C., *British Medical Journal*, Volume 285: pgs 537-40, August 21, 1982.)

2. Urge all obstetricians and generalists who practice obstetrics to advise their patients on the growth and development hazards to the fetus when the expectant mother smokes.

3. Write all T.V. station managers urging them to influence their personnel who appear on the screen not to set a bad public example regarding smoking.

4. Urge the legislature to enact legislation requiring that all restaurants and public buildings have "no smoking" areas available to non-smokers.

### THE HEALTH EFFECTS OF AIR POLLUTION IN COLORADO, 1983

In the past, consideration of the health effects of urban air pollution has been largely restricted to aggravation of cardiac and pulmonary conditions resulting from outdoor exposure. Urban air pollution can no longer be viewed as strictly related to ambient air quality existing outside of living or working air space. It should be appreciated that in most instances, pollution out of doors may become pollution indoors. Previous caution to patients with cardiovascular disease to stay indoors during pollution alerts may have led the general public to believe that outdoor pollutants do not make their way into residential living space. Four major considerations affecting air quality can be readily identified and must be appreciated in order fully to comprehend the synergistic potential for disease induction:

- 1) Outdoor air quality
- 2) Indoor air quality
- 3) Workplace air quality
- 4) Smoking

The conclusions offered in this position paper represent the consid-

ered judgment of the Committee on Environment of the Colorado Medical Society. These conclusions were reached after considering the multifactorial causations of disease with which air pollution is associated. These include host susceptibility, genetic predisposition, dose and duration of exposure, general physical condition, and other stress related factors. The committee acknowledges the complexities of the interrelating factors involved and the unavoidable limitations of basic research in this area.

Certain factors must be recognized to appreciate the scope of this problem:

- 1) Gaseous components of air pollution can be absorbed upon particulate matter and often react thereon.
- 2) Sub-micron particulate matter (2.0–10.0 microns) may result in greater retention in the lower airways than gases.
- 3) Water soluble gases and particles greater than 10 microns are effectively filtered from the air breathed through the nasal filtering system during tidal nasal breathing. Limited

data are available regarding nasal and sinus pathology that may result from this contact.

4) Many factors may alter breathing mechanics, e.g. hay fever leads to increased mouth breathing and nasal obstruction, thereby bypassing the nasal airway.

5) The increasing popularity of regular exercise encouraged by physicians and others may lead to increased respiratory demand which results in some bypassing of the nasal airway and increased delivery of pollutants to the lower airways and lungs.

Having considered all of these factors, the committee arrives at the following conclusions:

1. Urban air pollution, when sufficiently severe, can cause death in humans; these deaths are predominantly among those with increased susceptibility (see #6 below). Evidence that this has so far occurred in Colorado is not available.
2. Urban air pollution — CO, various forms of particulate matter, and, to a limited extent, oxidants — aggra-

vates pre-existing chronic heart and lung disease, at least in the metropolitan Denver area.

3. Urban air pollution, especially in large metropolitan areas can also cause temporary eye and nasal irritation. Whether this irritation leads to specific pathology remains to be determined.

4. Urban air pollution and tobacco smoke act synergistically in a causative role in chronic bronchitis and in an aggravating role in emphysema and asthma.

3) Research at Denver altitude is indicated. Projects suggested are: a) Measure changes in both ventilation and respiration (arterial CO<sub>2</sub> and O<sub>2</sub> levels) and CO uptake and excretion at rest and exercise breathing pure vs. ambient metropolitan Denver air in four categories of subjects: normals, asthmatics, those with angina, and those with COPD. b) The lead and CO exposure levels of women of child-bearing age and those with COPD, angina and asthma. c) A more precise understanding of what constitutes the "Brown Cloud." d) Refinement of techniques for mea-

*Automobile emissions are the major source of air pollution in urban Colorado.*

suring atmospheric pollutants at altitude, in particular particulates and adsorbed substances. e) Assess the validity of asthma exacerbations by providing such patients with a bronchodilator aerosol cartridge which will record its time and amount of use. f) The influence of CO and O<sub>3</sub> upon brain function at altitude.

4) Current EPA proposals would weaken the present CO standard, presenting a greater threat to Colorado residents than to residents of other areas of the country. The con-

sideration of the possible high altitude impact in recent work by Aronow would indicate that the present 2% COH<sub>b</sub> standard should be maintained in order to protect sensitive individuals. Standard changes under consideration would place sensitive Colorado citizens in jeopardy with increased exposure, resulting in higher COH<sub>b</sub> than the 2% level.

5. The widespread use of wood burning stoves as an alternative heat source represents an increasing source of air pollution. The treat-

ment of firewood with petrochemicals as a pest control measure has resulted in the emission of petrochemicals in urban air, the consequence of wood burning. Research into the effects of wood burning stoves, coal use, and diesel exhaust as relatively new sources of outside air pollution in the Denver metropolitan area should be encouraged.

## November

**3 Neuropsychiatric Grand Rounds** — 1-3 pm, Colorado State Hospital, 1600 W. 24th St., Pueblo, Colorado 81003, Conference Room "A". Examine the relationship of neurological and psychiatric disorders. Contact James H. Scully, MD, Phone: (303) 543-1170.

**6-9 77th Annual Scientific Assembly** — Baltimore Convention Center, Baltimore, Maryland. No fee for registration. Postgraduate courses \$15.00 for SMA members and \$22.50 for non-members. Contact Ms. Jeanette Stone, Southern Medical Association, P.O. Box 2446, Birmingham, Alabama 35201. Phone: (205) 323-4400.

**6-9 Women in Sports** — Hyatt Del Monte Hotel, Monterey, California. 22 hours credit AMA/CMA Category 1. Tuition: \$325.00 for physicians and \$200.00 for all others. Contact Ms. Jane Johnson, Office of Continuing Medical Education, School of Medicine, TB-150, University of California at Davis, Davis, California 95616. Phone: (916) 752-0328.

**10-12 Temporomandibular Joint - Pain and Dysfunction** — Sheraton Centre Hotel, New York City. Fee: \$375.00. 24 hours credit AMA Category 1, ADA Continuing Education Registry and AAGD. Contact Educational Resources Associates, Inc., P.O. Box 369, Brookline, Mass. 02146. Phone: (617) 738-8859 or 738-8861.

**11-13 2nd Annual Doppler Echo Course: A Quantitative and Qualitative Approach** — Sheraton-Anaheim, Anaheim, California. S. J. Goldberg, MD, Course Director. Sponsored by H.E.L.P., an Arizona non-profit health education organization. Contact S. J. Goldberg, MD, P.O. Box 13689, Tucson, Arizona 85732. Phone: (602) 626-7482.

**14 International Symposium on Biochemistry of Spinal Cord Injury** — Venezia, Italy. The scientists will present their studies on the effort to "arrest" post-trauma paraplegia. Contact Vincenzo Lombardi, MD, Chairman of Scientific Program and Arrangements Committee, Piazza Garibaldi, 48, 70021 Acquaviva, Italy. Phone: (080) 762835.

**19 Most Common Errors in Gastroenterology and How To Correct Them** — Vail, Colorado. Speaker: Everett Jones, MD. 2 hours credit Colorado Medical Society Category 1 and AAFP Prescribed. Contact Martin J. Rubinowitz, MD, The Denver Clinic, 701 East Colfax Ave., Denver, Colorado 80202.

**20-23 4th Annual Sports Medicine Now Program** — Kapalua Bay Hotel, Maui, Hawaii. 25 hours AMA Category 1 credit. Tuition: \$300.00 for physicians and \$150.00 for all others. Contact Stuart Zeman, MD, Course Chairman, Sports Medicine Now, Team Physicians, Oakland Invaders USFL, 2025 Morse Ave., Sacramento, California 95825. Phone: (916) 486-5834.

**Nov 30-Dec 4 2nd International Congress on Ericksonian**

**Approaches to Hypnosis and Psychotherapy** — Phoenix, Arizona. Program approved for AMA Category 1 credits. Contact Jeffery K. Zeig, Ph.D., Milton H. Erickson Foundation, 3606 North 24th St., Phoenix, Arizona 85020. Phone: (602) 956-6196.

## December

**1 Neuropsychiatric Grand Rounds** — 1-3 pm, Conference Room "A", Colorado State Hospital, 1600 W. 24th St., Pueblo, Colorado 81003. APA Approved for Category 1 credit. Examine the relationship of neurological and psychiatric disorders. Contact James H. Scully, MD. Phone: (303) 543-1170.

**7-10 An International Symposium on the Basic Mechanisms of the Epilepsies** — Kona Kai Club, San Diego, California. Fee prior to September 2 is \$160.00 for physicians and \$120.00 for nurses. After September 2 add \$10.00. 14 hours credit AMA Category 1 and California State Board of Registered Nursing. Contact Nursing, Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California 90024. (213) 825-5671.

**8-10 The Management of Patients with Burn Injuries** — Brown Pallace Hotel, Denver, Colorado. 18 hours credit AMA Category 1. AAFP, ACEP and CNA credit approval requested. Contact Dr. John A. Boswick, 4200 E. 9th Ave., Box C-309, Denver, Colorado 80262. Phone: (303) 394-8718.

**8-10 National Conference on Advances in Cancer Therapy** — Waldorf-Astoria Hotel, New York, New York. Credit: 16.5 hours AMA Category 1; 16.5 hours AMA Category 2-D; 15 hours AAFP prescribed. Contact Nicholas G. Bottiglieri, MD, Advances in Cancer Therapy Conference, American Cancer Society, 777 Third Ave., New York, N.Y. 10017. Phone: (212) 371-2900.

**9-10 Allergy and Asthma: 5th Annual University of California Course on Allergic and Asthmatic Diseases** with Dr. Hyman Chai and Dr. Martin Valentine — Capitol Plaza Holiday Inn, Sacramento, California. 16 hours credit AMA Category 1. Tuition \$195.00 for physicians and \$95.00 for all others. Contact Ms. Jane Johnson, Office of Continuing Medical Education, School of Medicine, TB-150, University of California at Davis, Davis, California 95616. Phone: 752-0328.

**9-10 Genetics, Birth Defects and the High Risk Patient: Practical Applications** — Capitol Plaza Holiday Inn, Sacramento, California. 10 hours AMA/CMA Category 1 credit. Tuition \$115.00 for physicians and \$65.00 for all others. Contact Ms. Jane Johnson, Office of Continuing Medical Education, School of Medicine, TB-150, University of California at Davis, Davis, California 95616. Phone: 752-0328.

**10 Anxiety Disorders** — Hyatt Regency at Crown Center, 2345 McGee, Kansas City, Missouri. AMA and AAFP credit available. Fee: \$25.00. Contact Jan Jonston, Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

## RU-TUSS<sup>®</sup> II

**sustained release  
capsules**

Before prescribing, see complete prescribing information. The following is a brief summary.

**DESCRIPTION:** Each sustained release capsule contains 12 mg of Chlorpheniramine Maleate, USP and 75 mg of Phenylpropanolamine Hydrochloride, USP in a base to provide prolonged activity.

**INDICATIONS:** For the treatment of the symptoms of seasonal and perennial allergic rhinitis and vasomotor rhinitis, including nasal obstruction (congestion).

**CONTRAINDICATIONS:** Hypersensitivity to any of the components, concurrent MAO inhibitor therapy, severe hypertension, bronchial asthma, coronary artery disease, stenosing peptic ulcer, pyloroduodenal or bladder neck obstruction. Do not use in children under 12 years.

Do not use this drug in patients with narrow-angle glaucoma, obstructive or paralytic ileus, intestinal atony of the elderly or debilitated patient, unstable cardiovascular status in acute hemorrhage, severe ulcerative colitis, toxic megacolon complicating ulcerative colitis, myasthenia gravis. Do not use in nursing mothers.

Use in treating lower respiratory tract symptoms, including asthma, is contraindicated.

**WARNINGS:** Caution patients about activities requiring alertness (e.g., operating vehicles or machinery). Antihistamines are more likely to cause dizziness, sedation, and hypotension in elderly patients. Patients should also be warned about the possible additive effects of alcohol and other CNS depressants.

**Usage in pregnancy:** Safe use in pregnancy has not been established. Use only when the potential benefits have been weighed against the possible hazards to the mother and child. Note that an inhibitory effect on lactation may occur.

**PRECAUTIONS:** Use with caution in patients with a history of bronchial asthma, increased intraocular pressure, hyperthyroidism, cardiovascular disease, hypertension, hiatal hernia with reflux esophagitis, intestinal atony of the elderly or debilitated intestinal obstruction, myasthenia gravis, renal function impairment, and ulcerative colitis (severe).

**Drug Interactions:** MAO inhibitors, Alcohol or CNS depressants, especially anesthetics, barbiturates, and narcotics.

**ADVERSE REACTIONS:** Prolongs the response to nervous stimulation, potentiates the response to norepinephrine, and inhibits the response to tyramine.

Slight to moderate drowsiness occurs relatively infrequently with Chlorpheniramine Maleate. Other possible side effects common in antihistamines in general include perspiration, chills, dryness of mouth, nose and throat.

**Cardiovascular System:** Hypotension, headache, palpitations, tachycardia, extrasystoles.

**Hematologic System:** Hemolytic anemia, thrombocytopenia, agranulocytosis.

**Nervous System:** Sedation, dizziness, disturbed coordination, fatigue, confusion, restlessness, excitation, nervousness, tremor, irritability, insomnia, euphoria, paresthesias, blurred vision, diplopia, vertigo, tinnitus, acute labyrinthitis, hysteresis, neuritis, convulsions.

**Gastrointestinal System:** Epigastric distress, anorexia, nausea, vomiting, diarrhea, constipation.

**Genitourinary System:** Urinary frequency, difficult urination, urinary retention, early menses.

**Respiratory System:** Thickening of bronchial secretions, tightness of chest and wheezing, nasal stuffiness.

**DOSAGE AND ADMINISTRATION:** Dosage should be individualized according to the needs and response of the patient. Adults: one capsule every 8 to 12 hours not to exceed 3 capsules daily. Not for use in children under 12 years of age.

**OVERDOSAGE:** Treatment of the signs and symptoms of overdosage is symptomatic and supportive. In the event of overdosage, emergency treatment should be started immediately.

**Treatment:** The patient should be induced to vomit, even if emesis has occurred spontaneously. Vomiting by the administration of ipecac syrup is a preferred method. However, vomiting should not be induced in patients with impaired consciousness. Stimulants (analeptic agents) should not be used. Vasopressors may be used to treat hypotension. Short-acting barbiturates, diazepam or paraldehyde may be administered to control seizures. Hyperpyrexia, especially in children, may require treatment with tepid water sponge baths or a hypothermic blanket. Apnea is treated with ventilatory support.

**HOW SUPPLIED:** Green and clear capsules with green and white beads. Bottles of 100 tablets. NDC 0524-0031-01

Store at controlled room temperature 15-30°C (59°-86°F).

**CAUTION:** Federal law prohibits dispensing without prescription.

## A.I.D.S. Report:

Rumor & Reality in Colorado  
p. 314

Blood Bankers Set the  
Record Straight  
p. 318

The publicity surrounding AIDS has provoked fear, even hysteria in the public. What is being done to educate the public about AIDS? Are there any programs in Colorado to try to prevent more cases from occurring? What are the risks surrounding blood transfusions, and what precautions have been taken to protect transfusion recipients? See the articles beginning on p. 314.

**"American Health Care: What Do You Want?"** asks John A. Whitesel, MD, in his President's Letter. The health care industry is changing rapidly in this country. But amidst all this change, the two groups of people most concerned, i.e. the patients and the physicians, have not been involved enough with planning for these changes. Dr. Whitesel discusses the changing health care field and the physicians' role on p. 301.

COLORADO MEDICINE (ISSN-0199-7343) is published monthly for \$20.00 per year as the official journal of the Colorado Medical Society, 6825 E. ## American Health Care — What Do You Want?

An interesting question — “What do you want?” Everyone and his health care planner are designing systems from large-scale structures to patchwork; stop-gap measures to address the needs that they perceive in the present health care system. Have they asked the recipients of these plans, the patients and the health care professionals (physicians and hospitals) what they want or what they anticipate will be the end result of these plans in their community?

The changes in the health care system being put in place or presently on the drawing board are based on the issues of cost. Very little thought has been given to maintenance of the quality or the availability of care in these new systems. The recipients must work these problems out on their own without “upfront” help from the planners. Certain areas may be made more efficient, but after that a rationing of care, decreased quality or lack of care will result.

#### FIRST YEAR SALARY GUARANTEE

with full financial participation after 1  
year. Replies with CV to:

**Medical Director  
Denver Clinic  
701 E. Colfax Ave.  
Denver, CO 80203**

How can we avoid or at least minimize these problems? We can start by outlining a system that **addresses the problems of cost** as perceived by government, business and labor, but maintains the **strong doctor-patient relationship** built up over the years that has made our system sensitive and responsive to our patients. **Quality of care** must be maintained by accepting standards and then reviewing for compliance. **Availability of care**, long our burden alone, prior to federal programs, will need the expansion of voluntary programs and the donation of time and services. **The indemnity concept**, (health care provider at risk for the balance of bills for services rendered above the patient's insurance) must be maintained. The “sacred cow,” that 10 percent of the gross national product is too much for medical care, must be looked at quite critically and the **priorities** in this country well may need to be reviewed and realigned.

There is a need for a statewide and eventually nationwide organizational structure to address these issues and communicate information and solutions. The medical staff section evaluated at the recent CMS Annual Meeting is a method to accomplish these goals. A statewide network of IPAs/PPOs (Individual Practice Associations, Preferred Provider Organizations) is another possibility. Whatever the final form, it should be democratic, address the issues and be able to act constructively.

The strength to make these things happen, or others that you feel are worthwhile, depends on your concern and involvement. No-one is going to ask you “What do you want?” You are going to have to **tell them!** Tell them by your involvement or expression of ideas through your component medical society, the Colorado Medical Society and the American Medical Association. Tell them through the Colorado Foundation for Medical Care. Tell them through your medical staff section or IPA/PPO. Tell them by your active support of the state and national legislators of your choice.

If you are waiting to be asked, you won't get to the dance and you may get left with only the pumpkin.

# CY CARE COMMITMENT

## IT'S MADE US THE LEADER ACROSS NORTH AMERICA... AND COLORADO

In-house data processing is available from many sources. But when you invest in CyCare 100, you'll get something you can't get anywhere else...our commitment to you.

It means concentrating our efforts on a single industry since 1968. Your industry.

It means giving you the benefit of the millions of dollars we're spending on research & development annually.

And, it means providing ongoing training and prompt service through our regional office near you.

Our commitment has paid off for 621 group practices across the United States and Canada. But the most important place we can put it to work is where you work.

Get the full story about CyCare 100, a system designed for practices with 2 or more physicians. Phone (303) 696-1796 or write today. You'll learn it now costs no more to go with the leader.

## Testing for Allergic Reactions to Anesthetics

To the Editor:

We are concerned about the article, "Allergic Reactions to Local Anesthetics," (Drug Therapy Questions and Answers, August 1983). Negative intradermal tests do not assure safe administration of a local anesthetic to a patient with a history of systemic reaction to one or more of these drugs. The recommended method<sup>1,2</sup> of evaluating such patients is as follows:

1. The drug to be tested should be administered by a cautious, controlled challenge.

2. The initial dose is administered percutaneously by prick (puncture) technique. Subsequent doses are administered intradermally or subcutaneously beginning with very dilute solutions (on the order of 1:1,000,000) and increased gradually to final dose of 1.0cc of 1 percent or 2 percent or other standard dilution. If no adverse effect occurs during at least one hour observation after the final dose, the tested local anesthetic

1. DeShazo RD, Nelson HS: An approach to the patient with a history of local anesthetic hypersensitivity: experience with 90 patients. J Allergy Clin Immunol 1979, 63:387-394.

2. Incaudo G, Shatz M, Patterson R: Administration of local anesthetics to patients with a history of prior adverse reactions. J. Allergy Clin Immunol 1978, 61: 339-345.

## Florence Sabin Award

Dear Editors:

Your July article about Mildred Doster and her award was a fine tribute to this outstanding physician and public health advocate. Certainly Dr. Doster is most deserving, since she epitomizes, as did Dr. Sabin, the professional person dedicated to public service.

The article, however, neglected to mention that the Florence Sabin Award is granted by the Colorado Public Health Association. Annually, CPHA recognizes a resident of the state, not employed in the field of public health, whose investment of time and energy has made Colorado a healthier place to live and work. Like Dr. Sabin a past president of the association, Dr. Doster is notable for her drive, dedication and determination that have helped us all.

Sincerely,  
John B. Muth, MD, FACPM  
Director, Health Department  
President, Colorado Public Health Association

## Carcinogenic Substances

Dear Editor:

There is in the body a protective mechanism against cancer. Otherwise its incidence would be greater. Carcinogenic substances interfere with this mechanism. Where would such a process lie? In the cell capsule?

Sincerely yours,  
B. T. McMahon, MD

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

- Registered nurses
- Lic. prac. nurses
- Certified nurse aides
- Orderlies
- Home health aides
- Housekeepers
- Companions
- Live-in personnel

## How to Be Insensitive

by Thomas H. Coleman, MD

Reprinted by permission from the  
**Denver Medical Society Bulletin**

Along with the daily blessings of admiration from the press and patients, doctors and medical students learn also to absorb a few slings and arrows and needles, sometimes from our own kind. We "don't communicate," "are unavailable," "keep people waiting," and then are in too much of a hurry to sit down and talk or listen. Sometimes we are guilty of all those things. But one needle hurts the worst; that we are "insensitive." Some of us are that, too.

A sedate couple in their retiring years came at night to a hospital emergency room concerned about the wife's abdominal cramps. They had recently celebrated their 50th wedding anniversary. The examining MD on duty asked the lady if she had "had any extramarital sex in the last three weeks." Fortunately for him her quick humor helped her to say with a straight face, "none that I know of." The doctor didn't get it. A different sort of sexagenarian might have given him an earful for his stupidity.

After two days of blood gases and "PFTs" (those are pulmonary function tests), a breathless woman waited for her consultant's opinion and even hoped for his reassurance. On the third morning he breezed into her hospital room with two or three disciples. They stood at the foot of the lady's bed and the consultant spoke: "Well, you don't have much lungs left."

One Sunday morning a patient in a large and reputable hospital had a shaking chill. His temperature was

104. He had a bad heart, he was on prednisone, and had a white blood count of 65,000. His blood pressure was falling. He was in and out of delirium and his kidneys was failing. Evidently his infected gallbladder was about to rupture. His wife and daughter had been called and were waiting just outside his room, at a little distance from the attending doctor and the intern reviewing his chart in the nurse's station. Into this silent scene hurried the resident to look over the intern's shoulder. "I hear we've got a guy who is about to croak."

In the uneasy moment that followed, we couldn't tell whether the family had heard him and we were afraid to look. They could have, but that was not as unfortunate as the questions that came leaping into our mind afterward. Where did this doctor come from? How has he come this far? What was his family and childhood like? Was he always this way or did it happen to him in medical school? Has he been watching "M\*A\*S\*H" too often? What is his future?

His insensitivity can and probably  
(Continued on p. 317.)

## Policies on Educational Programs Set by CMS Board

*At its August 19 meeting, the Board of Directors approved several policies governing various kinds of educational programs with which the Colorado Medical Society is regularly involved. This column will present these policies, furnish pertinent background information, and briefly discuss their implications.*

**1. Policy:** The Continuing Medical Education Committee shall have sole responsibility for the issuing of Category I CME credits for the CMS Scientific Program of the Annual Meeting, the Auxiliary Program of the Annual Meeting, and any other CME events originating within the CMS.

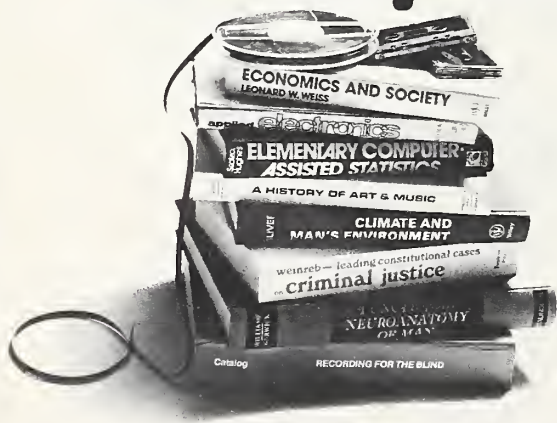

**2. Policy:** The Continuing Medical Education Committee shall be involved in the planning of any outside program for which CMS co-sponsorship and the issuing of Category I CME credits is requested.

**Background:** The CME Committee of the Council on Professional Education was established specifical-

ly for the purpose of gaining accreditation from the Accreditation Council for Continuing Medical Education (ACCME) for CMS and, once accreditation was awarded, using this authority to certify CMS-sponsored or co-sponsored CME programs for CME credit (see CME Column in the September issue of *Colorado Medicine*). In either case, the committee must review the program according to the criteria for Category I CME established in the *Physicians' Recognition Award Handbook* and the *Accme Essentials* and then make a determination about whether to certify credit and, if so, for how many hours.

**Implications:** In all cases when CMS is sponsoring a Category I CME program, such as the Annual Meeting Scientific Program, or certifying the credit for a program co-sponsored with another organization/institution, the CME Committee is responsible for certifying the credit. Any requests for such certification should be referred to the Division of Professional Services early in the process of planning the event; credit can never be certified

**Close  
your eyes.  
Now have  
someone read  
this to you.**

**Y**ou are blind. A student. Facing four years of college. With about thirty-two textbooks to read. Plus fifty supplemental texts. How are you going to manage?

With Recording for the Blind. Since 1951, we've helped over 60,000 blind, perceptually and physically handicapped students get through school. By sending them recordings of the books they need to read. Free.

Recording for the Blind is non-profit, and supported by volunteers and contributions from people like you who can imagine what it's like to be blind.

Your tax-deductible donation will help our students meet their educational goals. We'd all be grateful.

If you want to know more about us, write:  
Station E  
Recording for the Blind, Inc.  
215 East 58th Street, New York, NY 10022  
(212) 751-0860

**Recording for the Blind, Inc.**  
AN EDUCATIONAL LIFELINE.

after the event takes place and requests received late in the planning process are difficult to deal with properly.

The Division of Professional Services will process all such requests, including assembling all necessary paperwork and other information, for further referral to the CME Committee. The committee review procedure will then be implemented, resulting in a decision about the certification of Category I CME credit.

**3. Policy:** Any outside organization/institution desiring endorsement or approval of its program from CMS through use of the CMS name must be submitted to the Division of Professional Services for preliminary investigation, after which the request shall be directed, as efficiently as possible, to the appropriate CMS committee or council for further approval/disapproval, then to the Board of Directors for final approval/disapproval.

**Background:** CMS often endorses educational programs sponsored by other organizations/institutions. Sometimes these programs are Category I CME, but with the credit being certified by the main sponsor; other cases involve educational programs or events not carrying Category I CME credit at all, but serving another worthwhile purpose and quite worthy of CMS endorsement.

Confusion has arisen from time to time about how such requests are to be handled, sometimes resulting in failure to meet the requester's time frame for needing an answer.

In some cases, too, significant financial involvement by CMS may be included in the request, adding to the complexity of the situation. Accordingly, the Council on Professional Education recommended, and the Board of Directors approved, this policy so that these requests can be handled both expeditiously and appropriately.

**Implication:** Please send all requests for endorsement/approval of an educational program to the Division of Professional Services for referral to the appropriate council/committee. This will help ensure that all such requests, including necessary background information, are sent through the right channels in each case and then to the board

for a final decision.

**4. Policy:** In cases of CMS endorsement/approval of educational programs by other organizations/institutions, if only the use of the society's name is requested, but with Category I CME credit acquired elsewhere being offered, the name of the entity certifying credit shall be clearly indicated within the body of the program brochure.

**Background:** Concerns have arisen regarding Category I CME programs using the CMS name on an endorsement basis, but with the main sponsor

or another entity certifying the CME credit. This policy was adopted to remove the possibility that someone reading the program literature would incorrectly assume CMS was certifying the event for Category I CME credit.

**Implications:** The CMS name cannot be used on program literature unless the name of the entity certifying the Category I CME credit is indicated in the material. This rule applies only when Category I CME is indeed being offered, but is not being certified by CMS.

## KIDS FLY FOR HALF TO FLORIDA

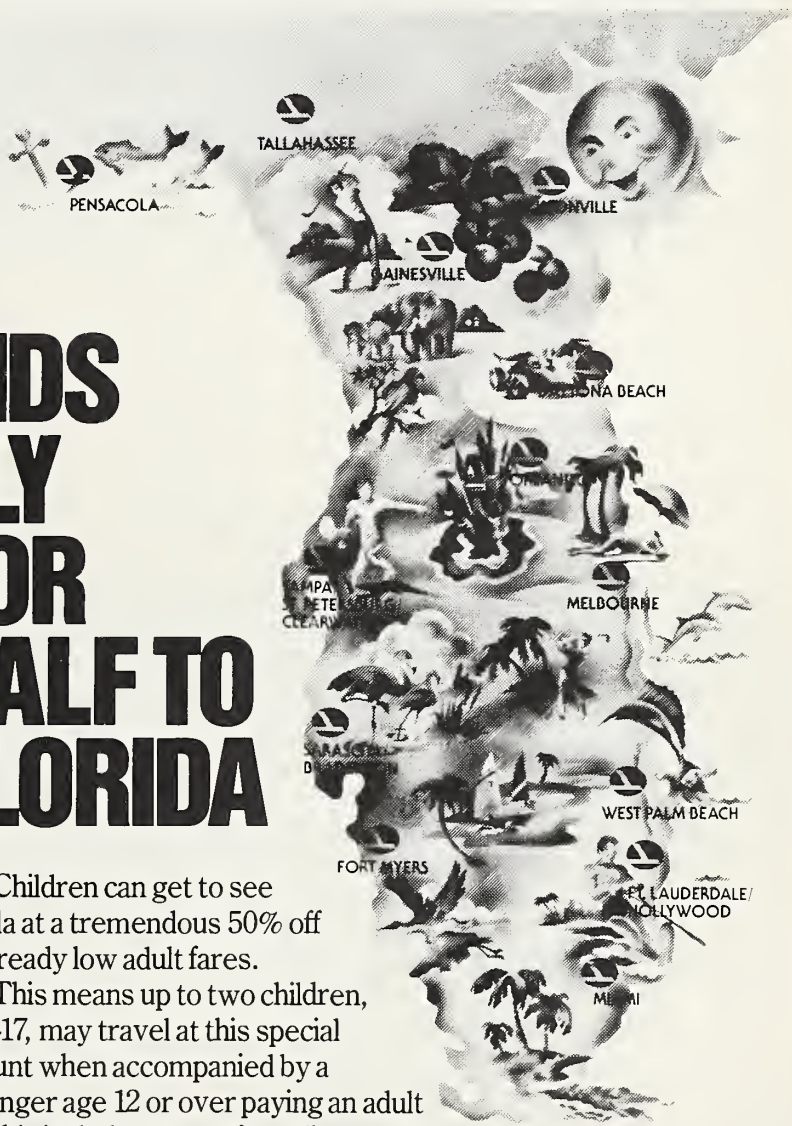

Children can get to see Florida at a tremendous 50% off our already low adult fares.

This means up to two children, age 2-17, may travel at this special discount when accompanied by a passenger age 12 or over paying an adult fare (this includes most of our discount fares). Offer expires December 15, 1983\*.

## New Guidelines for Chronic Pain Management

There are at least six treatment programs in the State of Colorado which are in operation for the primary purpose of treating patients with chronic pain. Some are outpatient facilities, some are based in acute care hospitals, some are based in rehabilitation facilities.

The Foundation first looked at chronic pain treatment in 1978 when the concept was a new one. Due to the renewed interest in this area and the development of new programs in Colorado the guidelines developed in 1978 were reviewed and revised by a subcommittee of the Foundation's Health Care Standards Committee.

Because of the complexity of the problem of chronic pain treatment a position paper was also developed which outlines some of the concerns and recommendations of the Health Care Standards Committee. The position paper is included below along with a summary of the guidelines.

### **Chronic Pain Management: A Position Paper**

#### **I. The Patient with Chronic Pain**

The patient with chronic pain is not the same as the patient with acute pain of long duration. The accepted designation for chronic pain is Chronic Intractable Benign Pain Syndrome. The syndrome is generally defined as occurring when a patient has reported pain for more than six months, and when the intensity, longevity, and unremitting nature of the pain cannot be explained on the basis of extant tissue anomalies or

pathophysiology (Capka et al., 1980). Accompanying the pain there are likely to be what Crue and Pinsky (1980) describe as "epiphenomena" which include the following: 1) mood and affect changes; 2) drug dependency or abuse; 3) side effects of previous surgeries or treatments; 4) psychosocial withdrawal and lack of gratification from interaction with others; 5) interpersonal conflict with significant others; 6) helplessness; 7) hopelessness; 8) decreased self esteem; 9) decreasing physical capacity secondary to decreased activity, and 10) conflicts with health care delivery personnel with resultant dissatisfaction and hostility.

The patient with chronic pain demands of the physician the most sophisticated of the traditional medical skills. At the same time the patient with chronic pain may derive little or no benefit from the traditional medical treatments. The patient with chronic pain is a nagging reminder to the physician that the physician's technical know-how is of little value in the face of the continuing report of pain. Physicians are frequently frustrated by dealing with this patient for whom they can seemingly do nothing. The physician usually cannot isolate a cause for the problem which corresponds with the patient's degree of pain and the patient is perceived as getting a certain amount of satisfaction from frustrating the physician's attempts at "cure."

The patient is often described as a "doctor shopper" who, when faced with the information that the physician can do nothing will "get another opinion" until something is done. Unfortunately, this often leads

to the patient having surgery, the results of which will, again, be disappointing or to the patient receiving medications which at best do not offer relief and at worst lead to unnecessary dependency.

Theories abound as to the "real" problem in chronic pain. There is a complex interaction of physical and psychological factors which are not made clearer by trying to differentiate "real" pain from pain that is "all in the patient's head." The psychological profile of the chronic pain patient often includes high scores on standardized psychological tests in the areas of depression, hypochondriasis, and hysteria (Sternbach, 1974). It is difficult to say, however, which comes first, the psychological profile or the pain.

As can be readily imagined, the cost to society of a patient with chronic pain can be immense. Not only does this patient consume an inordinate amount of medical care, the patient also costs the system through lost work productivity and contribution to family dysfunction. The total cost of pain to the taxpayer per individual per year (without medical expenses) is estimated to average (in 1980) \$21,814.00 which includes lost income, taxes lost to the system, and disability benefits paid to the patient (Brena et al., 1980). In an era when cost effectiveness is of concern, it is necessary to look at appropriateness of care both in terms of the degree to which patients may benefit from the care, the cost of that care, and the degree to which care will prevent the need for care in the future.

#### **II. The chronic pain management program**

The chronic pain management program is a relatively new development in the spectrum of health care services. The model for most programs is that of Bonica (1977) who designed and implemented a program in Seattle in 1960. The approach taken to management of patients with pain in such programs is a multifaceted one, the goals of which are not to eliminate the patient's pain but to provide the patient with the necessary treatment and skills to increase functioning to the highest attainable level.

Typically, the program offers a wide range of services from physical therapy, traditional medical care and behavioral conditioning to music therapy and drivers education. A major emphasis is often placed on the reduction of what are referred to as "pain behaviors." This is accomplished through psychiatric counseling, behavioral conditioning, and physical and other therapies.

Because the focus of a pain management program includes the elimination of dysfunctional behaviors and replacing them with functional behaviors, treatment may be a lengthy process. The length of time in treatment and the multifaceted nature of the treatment contribute to a form of care which is very expensive. It is recommended, for example, that approximately four weeks of treatment are required in order for the desired behavioral changes to take place (Addison, 1981). At acute care hospital rates for a day's care it can be readily seen that patients should be carefully selected in order to treat those who have the most potential for improvement. Another factor which should be considered in patient selection is the degree to which treatment will lessen the medical and social costs which will result if treatment is not provided.

### III. Patient Selection

As the Foundation's Guidelines for Chronic Pain Management describe, it is believed that patient selection is important in trying to hold down the cost associated with this type of treatment. Briefly, the guidelines state that in most cases the patient who is appropriate for a chronic pain management center meets the following guidelines: the patient has a primary complaint of pain; the patient's complaint of pain has endured for six months or longer; the patient has had complete medical and psychological evaluation prior to admission and it has been determined that the patient has a problem with pain which is not amenable to resolution through more traditional treatment; and the patient does not have a terminal illness which causes the patient's pain (e.g. a predicted life expectancy of less than one year).

Attempts have been made to

*Although pain cannot be reduced for all patients, many can be helped through knowledge and use of correct body mechanics and relaxation methods. For the others, the will and ability to cope with the pain and live nearly normal lives in spite of it is instilled by a knowledgeable and understanding staff. Many patients who had formerly spent most of their time in bed, immobilized by their pain, perform a normal or nearly normal level of daily activity after completing the program. According to Dr. Tom Washburn, who directs the program, enhanced quality of life and if possible a return to remunerative employment in a competitive job market are major goals of the program.*

*The thrust of the Chronic Pain Management Program at Spalding Rehabilitation Hospital, where these pictures were taken, is to mitigate the effects of chronic pain on a person's lifestyle. In addition to extensive personal counseling, a variety of therapies are employed.*

*Karen Williams instructs patient Shirley Newyn in specific exercise techniques designed to increase her strength, flexibility, and confidence in dealing with chronic back pain.*

determine, in advance, which patients are likely to be successful in treatment. These attempts have not resulted in further clarity (Aronoff and Evans, 1982). It has been established, however, that the patient's motivation to increase functioning is an important factor. Further, it is noted that a patient's motivation is directly related to whether the patient wishes to continue to receive disability compensation for pain (Painter, et al. 1980). Success does not appear to be related to the extent of organic pathology although there is some correlation with the duration of the illness (e.g. those who have had pain longer are less likely to benefit).

#### **IV. Results of treatment**

A large number of programs have now been in place for several years and attempts have been made to evaluate the effectiveness of the multidisciplinary program in dealing

---

## **The chronic pain patient may derive little benefit from the traditional medical treatments.**

---

with the many problems of the pain patient. In general the evaluation studies are difficult to compare due to the use of differing evaluation measures, definitions, etc. A large number of the reports are able to substantiate that patients who receive treatment become more active, interact more appropriately, and feel better about themselves (Seres et al, 1980, Aronoff, 1981, Addison, 1981, Aronoff et al. 1982, Linton, 1982). The studies have failed to demonstrate that the treatment results in the return of a significant proportion of patients to productive employment.

It must be kept in mind that the treatment effects of the pain management program may well be compromised by other aspects of the patient's life. A patient who, for example, has been unable to work and is receiving workmen's com-

pensation will be terminated from compensation if the treatment program is successful, i.e. if the patient's pain "goes away." This is not an incentive for the patient to become functional. Likewise, family relationships which supported and sustained the patient's pain behavior prior to treatment are still going to be there after the patient finishes treatment. Unless unhealthy family dynamics are altered along with the patient's treatment, the possibility of regression remains high.

#### **V. Barriers to cost effective treatment**

The Foundation's guidelines for chronic pain treatment recommend that only those patients with very specific problems (e.g. drug dependence, extreme behavioral problems, profound inactivity) require institutionalization (hospitalization or other 24-hour care) for chronic pain treatment. Few patients require the expensive diagnostic and technologic capabilities of the acute care hospital and a large portion of pain patients can be adequately, if not most appropriately, treated in an out-patient setting. The attached guidelines recommend a level of care referred to as "24 hour residential." There are few facilities in the state which meet the definition for this level of care. Primarily, pain treatment programs are contained within acute care hospitals where costs may be higher and care equal to that which can be provided in a lower level of care.

Of course, the present treatment structure exists partially because of reimbursement mechanisms which deny payment for treatment provided outside the acute care hospital.

The Colorado Foundation for Medical Care encourages third party payers as well as the Colorado Workmen's Compensation Program to discourage the rewarding of dysfunctional "pain behavior" by the provision of extended benefits and/or expensive and nonproductive hospitalization. This is not to say that individuals with pain should not be afforded treatment for their problem. On the contrary, a properly organized and staffed chronic pain treatment center may be the only effective treatment for a patient for

whom all other forms of treatment have been tried and failed. The pain treatment center may return a patient with chronic debilitating pain to productivity and, therefore, do the patient and his or her family, as well as society, a great service.

#### **VI. Recommendations**

The roots of the chronic pain problem are multiple and complex. Solutions will not come without major changes in societal expectations relative to the role of the physician in health care. At this time, however, there are changes which would make the care system more effective and less costly:

1. It is important that physicians are able to discriminate between a patient with acute pain and a patient with chronic pain. The two patients are different and require different treatment. Treatment of a patient with chronic pain with "cures" for acute pain is not helpful and is likely

---

## **Physicians should be able to discriminate between a patient with acute pain and a patient with chronic pain.**

---

to lead to increased disability and dependence.

2. There is a tendency for physicians to view pain as either "real" or "imagined." "In the management of chronic pain the first and overriding rule is that the patient's valid experiences are data from which the doctor or other health professional commences his work." (Mersky, 1980). Physicians need to become more aware of the nature of chronic pain as a patient problem that requires physician care but not necessarily medicine or surgery.

3. Treatment in a chronic pain management center is comprehensive and requires the cooperation and continued attention of the patient's primary physician. Discharge summaries from chronic pain treatment should be provided to the patient's referring physician in order

for treatment to continue after discharge. There is a mutual responsibility for communication and support between the referring physician and the pain management program. Because chronic pain is so often a lifestyle problem, treatment must be continued long after discharge from the chronic pain management center.

4. At this time it is difficult to predict who will benefit from chronic pain treatment and who will not. It is established, however that patients who have incentives, financial, social, or personal, not to return to adequate functioning will have little chance of success. Because of the structure of many disability compensation programs many patients are encouraged to maintain pain behaviors. Restructuring of these programs to recognize this is essential.

5. Third party payers who restrict the provision of care to the hospital setting unknowingly increase costs to the system. The vast majority of patients can be most appropriately treated in a less intensive setting.

6. It is imperative that research studies be conducted which will provide data relative to the comparative effectiveness of different programs. Data are currently collected in such a way as to make comparisons impossible and the determination of effectiveness problematic.

## Guidelines for Chronic Pain Management

The Foundation guidelines for chronic pain treatment include three general areas:

1. Guidelines for the facilities themselves. This section describes standards for the treatment programs themselves and was adapted from guidelines for pain treatment programs developed by the Commission on Accreditation of Rehabilitation Facilities.

2. Criteria for patient selection. This section describes the patient who is appropriate for treatment in a chronic pain treatment program as having the following characteristics:

- The patient has a primary complaint of pain,
- The patient's complaint of pain has endured for six months or longer,
- Prior to admission to the pain treatment program the patient has had complete medical and psychological evaluation and it has been determined that the patient has a problem with pain which is not amenable to resolution through more traditional treatment, and
- The patient does not have a terminal illness which causes the patient's pain (e.g. a predicted life expectancy of less than one year).

3. Guidelines by treatment setting. This section describes three levels of care for chronic pain treatment, the type of patients which are appropriate for each level of care, and functions which should be performed by members of the treatment team in each level of care. The three

levels of care are, a) acute care, b) other 24 hour non-acute care, and c) outpatient care.

Acute care is defined as occurring in a facility which has the complex technological and equipment capabilities for complete diagnostic evaluation and treatment including surgery (thus there are facilities in Colorado which are licensed as hospitals which would not fit this definition, e.g. the rehabilitation hospitals).

Acute care is appropriate only for those people who meet the criteria for patient selection above and who have acute medical needs which require that level of care, e.g. drug dependence requiring detoxification, other acute illness meeting the Foundation's general hospital admission criteria. Non-hospital 24 hour care is appropriate for those individuals who meet the patient selection criteria who are severely physically and/or emotionally disabled by their pain. This population requires the 24 hour supervision which would be provided by this level of care. Finally, for a large proportion of chronic pain patients, outpatient care may be appropriate.

The guidelines emphasize that communication between the treatment program and the patient's attending physician is essential. The need for follow-up support and care following treatment is also recognized.

The guidelines in their entirety are available upon request (contact Mary Milligan, Department of Program Planning, 321-8642).

## Hall of Life Provides "Adventures in Health Care"

"Does it hurt?" asked students in the kindergarten classes from Del Pueblo Elementary School in Denver. The children were attending an "Adventures in Health Care" class where they learned about the experience of visiting a physician's office. The class is part of a series developed by the Hall of Life education center and Project Health PACT (Participatory Assertive Consumer Training) of the School of Nursing at the University of Colorado Health Sciences Center.

The class encourages children to feel more confident about visiting their doctor and teaches them how to listen to and ask questions of their doctor and other health care providers. The "Adventures in Health Care I" class, which premiered on Wednesday, October 5, was special-

ly designed for pre-school, kindergarten and first grade children.

It features a puppet show developed by the Hall of Life staff and puppeteer M'el Reum. During the class on October 5, Hall of Life staffer Susan La Bonde discussed with the kindergarteners what a typical visit to a doctor's office might be like, e.g., some of the things a doctor might do during an examination, what a medical office looks like and what some of the doctor's equipment, such as a thermometer or stethoscope, does.

The children were encouraged to ask questions and to discuss their experiences at the doctor's office, which they did, often enthusiastically and in detail.

The President of the Hall of Life is Leo J. Nolan, MD, who is CMS Alternate Delegate to the American Medical Association. Members of the Board of Directors of the Hall of Life include Colorado Medical Society Auxiliary President Bunkie Inkret and CMS Executive Director

of Communications, William Pierson.

The Hall of Life has received donations from the Colorado Medical Foundation and the Clear Creek Valley Medical Society. Both the state and local medical society auxiliaries have had active involvement with the organization.

## Mesa County to Offer Health Education Programs

Mesa County Medical Society will offer for the second season its highly-successful series of adult health education seminars. The programs will begin in January and run through April. The series is sponsored in conjunction with Mesa College and is offered free of charge to the public.

This series, first presented last January, was the brainchild of C.K. Wanebo, MD, then-President of the Mesa County Medical Society. The series arose from "the need to have preventive health education and information available to the local people," according to Linda Hoffman, the medical society's administrative director. She cited the area's isolation from health education opportunities available to the public in large metropolitan areas.

When the society was first organizing the programs, Ms. Hoffman said, many of the physicians were hesitant about taking part. However, she added, they were "thrilled" at the enthusiastic response to the lectures from the local community. More than 40 physicians, family physicians as well as specialists, from the medical society were lecturers at the programs. Two nutritionists also took part in the programs.

Approximately 90 people came to each of the twice-weekly seminars. One of the programs, on stress management, had 268 people in attendance. Each of the 27 seminars included a question and answer period and covered a wide variety of topics, including nutrition, heart disease, arthritis, depression, cancer and general surgery.

The series met a particularly en-

*Puppets and teacher Susan La Bonde have almost all their class's attention as they discuss a visit to a doctor's office.*

thusiastic response from the elderly residents in the Grand Junction area, some of whom attended every program. Some drove to the college from as far away as Montrose and Delta.

The programs also received a positive response from the local media, which provided print, TV and radio coverage, including interviews with some of the presenters.

In addition to providing education and information about health and wellness to the public, the series provided a chance for interaction between local physicians and the lay community. According to Ms. Hoffman, people were often surprised to find that they could talk to the physicians "just like regular people." The programs have proven to be a "wonderful public relations tool," she said.

This year the series will be expanded to 30 meetings. In addition to several new topics, some different aspects of the more popular subjects will be covered.

This year a planning and organizational committee for the seminars has been established, with Dr. Wanebo heading the committee, assisted by Bernard Pacini, MD. Dr. Pacini will head the committee next year. The Mesa County Medical Society Auxiliary will assist at the meetings.

"We anticipate the same kind of success this year," Ms. Hoffman commented. The participation from the public may even be greater this year. The society plans to contact the local HMO and major employers about the series, in the hope that they will encourage their employees to attend. The Mesa County physicians, too, are enthusiastic, she said; those physicians who did not take part last year "are now eager to become involved."

## CMS Gets Medicare/Medicaid Rule Amended

The Colorado Medical Society, working in close cooperation with the Association for Better Geriatric Care (a broad-based coalition of health providers in the geriatric field) successfully lobbied the State Board

## Grievance Of The Month

Patient Mrs. M sought attention at an emergency room at a local hospital one night for symptoms of an upper respiratory infection. Her regular internist, Dr. A, was not on call that night, so she was seen by his partner, Dr. C. The patient noted that Dr. C tended to be a bit unsteady, somewhat jovial in manner and had an odor of alcohol on his breath.

After a brief examination, a medication was prescribed and the patient was sent home. The patient subsequently developed a skin rash while taking the medication and required additional dermatological treatment. A grievance was filed because of the combination of a drug reaction to a medication prescribed by a physician who appeared to be intoxicated while on duty.

Investigation of the patient's emergency room chart revealed that this patient had an upper respiratory infection which ap-

peared to have been diagnosed and treated adequately. The patient specifically denied any previous allergies to medications at the time of this examination.

Personal communication with Dr. A, Dr. C's partner, revealed that Dr. C had been under increasing stress, that his drinking had increased somewhat and that he was undergoing divorce proceedings at the time of the incident. The committee informed the patient that her disease was appropriately medically managed by Dr. C and that a certain percentage of patients will develop a dermatological reaction to new medications, even in the absence of a previous history of drug allergies.

The committee then worked with Dr. A, Dr. C's partner, to help Dr. C realize the stress that he was under and to seek appropriate counseling lest he become an impaired physician in the future.

## Legal Issues for the Practicing Physician

- ★ Free lecture series presented by the Colorado Bar Association

of Social Services at its October meeting to amend the current rule which reimburses physicians and other providers the lesser of Medicare/Medicaid.

The new rule, effective for services provided after October 7, 1983, will apply to all providers except those reimbursed under Part A of Medicare. Part A providers — hospitals, skilled nursing facilities, and home health agencies — will continue to be reimbursed the lesser of Medicare/Medicaid allowable reimbursement.

For physicians, the effect of the amended rule will be to restore Medicaid payment of co-insurance and deductibles for services provided to patients covered under both Medicare and Medicaid up to the Medicare maximum allowable benefit.

## CU To Hold Ethics and Health Care Conference

conference to be held at the University of Colorado Health Sciences Center November 18 and 19. The conference is sponsored by the University of Colorado School of Medicine and the Colorado Humanities Program. The conference will provide a public forum to approach problems created by the necessity to allocate resources.

Participants in the conference will examine the effects of resource allocation on critical issues such as reproductive rights and genetic screening, the sovereignty of decision-making, termination of life and the limits of scientific inquiry. The conference will conclude with a discussion about the ethical implications involved in developing public policies to ration health care resources.

Moderators and panelists will include Lt. Governor Nancy Dick; Colorado Supreme Court Justice Luis Rovira; State Senator Regis Groff and UCMC Vice Chancellor of Academic Affairs M. Roy Schwarz, MD.

# AIDS in Colorado: Rumor and Reality

Item: in one well-publicized incident, a Denver policeman, upon discovering that a burglary victim he was interviewing was an AIDS case, panicked and ran out of the person's house. Later, the chief of police and other city officials apologized, but many health care and city workers who may have contact with AIDS cases, or "high risk" persons, e.g. homosexuals or hemophiliacs, remain worried about their chances of contracting AIDS.

Item: In Denver, some residents, alarmed about the possibility of contracting AIDS from blood transfusions, have established reservoirs of blood banks or are using hospitals that use blood-recycling machines.

Item: It was reported to the Gay and Lesbian Community Center in Denver that the child of a gay parent was kept isolated from the other children in a local day care center, because the staff was afraid the other children might contract AIDS from the child.

Taken alone, the statistics are frightening. At the time of publication, there were 2400 cases of AIDS reported in the United States. More than 800 people have died from the disease. But the one inescapable fact that has alarmed lay people and physicians is that there is as yet no known cure. "People are confusing the severity of the disease with its infectivity," commented David Cohn, MD, Assistant Director of Disease Control at the Denver Department of Health and Hospitals. "Fear of the unknown leads to undue concern," he added.

The public has been so inundated with information that many people are confused as well as frightened. Dr. Cohn said that misinformation about AIDS exists even within the medical community. Fred Wolf, Manager of the VD Control Program at the Colorado Department of Health, said that much of the responsibility for the public confusion and fear must lie with the media, "which has tended to be inflammatory" about the issue.

Yet the Center for Disease Control has reported that "Airborne spread (as in outbreaks of the flu) and interpersonal spread (of AIDS) through casual contact do not seem likely."

Who is at risk of contracting AIDS? The high-risk groups have been

---

**Editorial Note:** *The United States Center for Disease Control defines Acquired Immune Deficiency Syndrome (AIDS) as a "reliably diagnosed disease that is at least moderately indicative of an underlying cellular immunodeficiency or any other underlying reduced resistance reported to be associated with that disease."*

*AIDS has been widely reported in medical journals and in the public media. However, the publicity has resulted in fear and often panicked behavior among the population, even in Colorado, which at time of publication has had 25 reported cases.*

*Colorado Medicine publications editor Sheila Swan recently interviewed several Colorado public health physicians, medical administrators and a gay community center director to find out what is being done locally to educate the public, and in particular high risk populations, about AIDS.*

*Additionally, the Denver Metropolitan Area Blood Bank Directors, Drs. Ben Galloway, Bob Chapman, Renata Greenspan, Don McClure, Ed Orsini and Phil Reynolds, have put together a report for Colorado physicians about the risks of transfusion-induced AIDS and directed blood donations. That report follows on p. 318.*

---

reported to be Haitian immigrants, intravenous (IV) drug users, hemophiliacs and sexually-active gay males. Since few if any Haitian immigrants live in Colorado, it is the latter three groups who present the most risk factors locally.

Several diseases may attack AIDS patients, in particular Kaposi's Sarcoma, a rare form of cancer, and pneumocystis carinii (pneumonia). The death rate is high, perhaps as high as 75 percent. Most of the at-risk population live in urban areas. In Colorado, all but one of the reported cases so far have been in the Denver area; one case has been reported in Colorado Springs.

According to Franklin N. Judson, MD, Director of the Disease Control Service at the Denver Department of Health and Hospitals, "the general public has been over-educated and over-sensitized" to the AIDS issue. "If a person is not an abuser of intravenous drugs, hemophiliac or a sexually-active gay male, the risk of contracting AIDS is extraordinarily small," he said. Dr. Judson noted the

irony of a person who smokes two packs of cigarettes a day and yet worries about AIDS.

What is being done in Colorado to educate the general public and the "high risk" populations, such as sexually-active gay males, about AIDS? In particular, what can physicians do to educate themselves and their patients and to stem unnecessary fears?

## Department of Health, VD Control Program

According to Mr. Wolf at the V.D. Control Program, although his department has no concerted public education program, they have tried to provide "reasonable, well-balanced information" to persons inquiring about AIDS. The Department of Health circulates a monthly AIDS fact sheet to local health departments. The fact sheet contains many articles reprinted from the CDC *Morbidity and Mortality Weekly Reports*.

Members of the VD Control Program staff have spoken about AIDS

to local medical societies, nurses' groups and other health care providers. In addition, the *Colorado Disease Bulletin* published by the Department of Health, which has 3,000 subscribers, provides an update on AIDS research and treatment.

According to Mr. Wolf, the Department of Health has requested notification of suspected cases of AIDS, but it is not a legally reportable disease, such as syphilis or gonorrhea.

Physicians with questions about AIDS should feel free to call the VD Control Program. The staff will be happy to answer questions or research questions which they cannot answer.

#### **Disease Control Service**

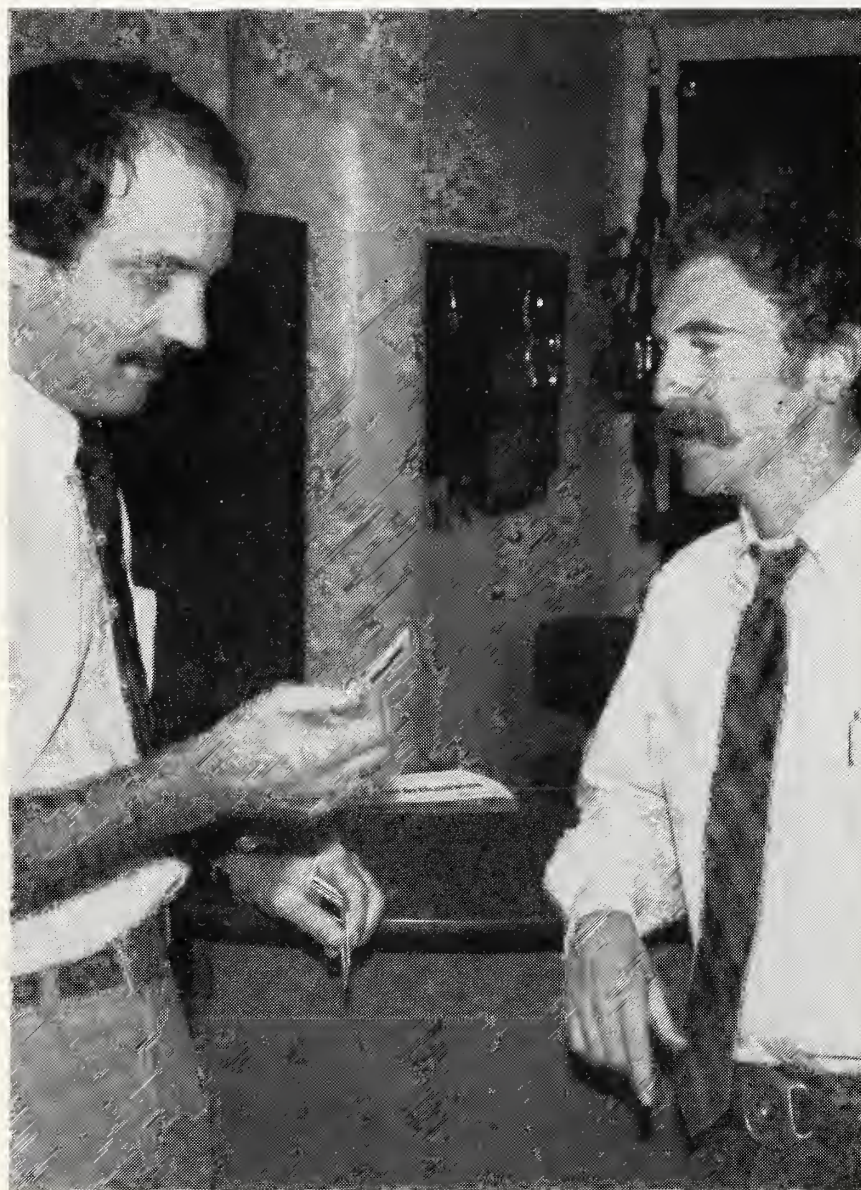

Dr. Judson and Dr. Cohn at the Disease Control Service have been deluged with requests to speak about the research into and treatment of AIDS. According to Dr. Cohn, "we in public health became involved early on," in educating local health care providers about AIDS. Until a cure is found, public health education, of the general public as well as "high risk" individuals, is of paramount importance, Drs. Judson and Cohn noted.

Dr. Judson and the Denver Department of Safety have developed three 10-minute videotapes on AIDS, which are aimed at "first responders:" public servants such as police officers and firefighters, who

have a great deal of public contact and who may have fears about coming in contact with AIDS patients. The film has been shown to various groups of police officers. According to Sgt. Ray Clem at the Denver Police Department, the film has "taken some of the mystery out of AIDS" and "relieved some fears."

As far as the treatment of AIDS patients goes, "it has been an in-hospital issue," according to Dr. Judson. "There have been no patients yet who have required emergency treatment outside the hospital." However, he noted that the CDC has formulated procedures for treatment of AIDS patients in emergency room settings which DHH has on hand.

Because there are as yet no specific diagnostic procedures, each suspected case of AIDS is treated on

Franklyn Judson, MD, Director and David Cohn, MD, Assistant Director, Disease Control Service.

---

## Directed donations will not reduce the risk of transfusion-transmitted AIDS.

---

a case-by-case basis, which includes immune function tests. Those patients with a suspected case of AIDS may be referred to local gay services, such as the Gay and Lesbian Community Center, for support groups and counseling.

#### **Gay and Lesbian Community Center**

The Gay and Lesbian Community Center began its public education program, the Colorado AIDS Project in February, 1982, nine months before the first AIDS case was reported in Colorado. The center's program was modeled in part on other gay community programs in other cities, e.g. San Francisco and New York.

The AIDS Project is funded entirely through donations. Recent public fundraisers for the project include a ten kilometer run "Torches in the Rain," in which Denver Mayor Federico Pena took part and a program at Denver's Paramount

Theatre. Approximately one-half the audience at the program was non-gay, according to the GLCC director, Carol Lease.

The center sponsors a 24-hour AIDS Rumor Control Hotline, community forums and a variety of support groups for AIDS patients, their families and friends. There is also a support group for people who do not have AIDS, but are anxious about the possibility of contracting it, and a group for volunteers who work with AIDS patients.

Carol Lease, director of the GLCC, said that the center is attempting to "focus more and more on prevention" (of AIDS) by "alerting gay men to a healthier lifestyle." The AIDS Project has published several editions of its informational brochure, directed to gay men, which contains information about the symptoms of

AIDS prevention and treatment to gay groups in towns such as Grand Junction, Breckenridge and Glenwood Springs.

They have also expanded their educational efforts to try to reach the general public. This effort includes a planned brochure aimed at city employees. The center also plans to send informational brochures out to the medical community. "We want the medical community to know we're here and what we're doing," Ms. Lease said.

"We feel our educational programs have prevented some transmissibility" of AIDS, Ms. Lease said. Dr. Cohn, who has lectured to the gay community frequently for the GLCC's program, noted that the AIDS Project's efforts "have been nothing short of superb," and may

indeed have prevented some cases of AIDS from occurring. "Education programs can prevent new (AIDS) cases and probably already have," he said.

#### Canon Correctional Complex

"As far as we know, we have not come across any suspected AIDS cases yet," said Bob Moore, Medical Services Administrator at the Canon Correctional Complex. However, the state correctional system is prepared to deal with any cases should they occur — and with the impact such a case might have on the inmate population.

The staff at Canon City has not expressed any fear about dealing with possible AIDS patients, Mr. Moore said. However, they are apprehensive about the effect a reported case

## The general public has been over-educated and over-sensitized to the AIDS issue.

AIDS and about means of reducing the risks of contracting it, including changing some sexual practices, and an emphasis on good nutrition, rest and exercise. More than 70,000 AIDS information brochures aimed at the local gay community have been distributed by the center.

More than 100 people attended the most recent community forum, in mid-September, including a number of non-gay local residents, Ms. Lease said.

The center receives many calls on its hotline, Ms. Lease noted, at least half of which come from non-gays. People who come into the center or who call the hotline and seem to have suspicious symptoms are referred to health care providers.

The center has received many calls from throughout the Rocky Mountain area, including rural areas of Colorado, Montana and Wyoming. In 1984, Ms. Lease said, center staff and volunteers will travel around the state to speak about

Within Denver all blood is donated. Blood donors are given information sheets on AIDS before they give blood. If they fit into any of the high risk categories, they are advised not to give blood. (For more information on AIDS and blood transfusions, see accompanying article by the directors of the blood bank.)

Last March, on a recommendation from the United States Health Service, the American Red Cross barred Haitian immigrants, IV drug users and male homosexuals from donating blood. Additionally, the Gay and Lesbian Community Center in Denver has recommended in one of its brochures that "if you are a sexually active gay man with multiple, frequent partners, or if you have any of the general AIDS symptoms, you should not donate blood."

Of the 25 cases of AIDS reported in Colorado, 23 have been male homosexuals. Only two were transfusion cases; one was a woman who had had contact with an IV drug user, the other was a hemophiliac.

According to a recent joint

statement of the American Association of Blood Banks, the American Red Cross and the Council on Community Blood Centers, "it appears at this time that the risk of possible transfusion-associated AIDS is on the order of one case per million patients transfused."

According to Steve Brown, administrator at the Belle Bonfils Memorial Blood Center, the center has received many inquiries from the media and public about the dangers of receiving and donating blood. However, he says, during the months of July and August when media attention to the subject of AIDS was at its height, the center did not see a drop in their blood donations.

Mr. Brown noted that patients have always been able to donate their own blood. However, requests to do so must be channeled through the patient's own physicians who must make arrangements with the center. "The physicians thus become the focal point" in the communication between blood bank and patient.

of AIDS would have on the inmate population. He noted that, although the staff is aware of the homosexuals and IV drug users among the inmates, a number of inmates who are "straight" on the outside engage in homosexual activity within the prison setting. Thus not only do inmates have the "normal" apprehension about AIDS that the general population does, they have added fears of contracting it because of the sexual activities of many of their own community. Thus, a living situation which often is tense anyway could become highly combustible.

The complex has five dispensaries and an infirmary. The physicians, physicians' assistants and nurses in the system are in touch with other organizations and programs dealing with prison health care. One of the physicians on staff has had experience in dealing with suspected AIDS cases. Each month, Mr. Moore's office calls each county jail with a health care person on staff to see if any suspected AIDS cases have been detected.

Mr. Moore has also kept in touch with what is being done in health education in other correctional systems, including a prison health care conference sponsored by the American Medical Association and American Health Care Consultants which he attended a year ago.

Procedures have been set up to handle transfers of any suspected AIDS patients to Colorado General Hospital. The correctional complex has set up a consultant liaison with Dr. Charles Kirkpatrick at National Jewish Hospital in Denver, who has applied for a grant to research AIDS.

Additionally, an informational brochure has been prepared for distribution to correctional staff and inmates.

What role can local physicians play in AIDS education and prevention efforts? First, according to Dr. Judson, they should be "in the position of having at least the minimal epidemiological information available from the Center for Disease Control." Second, they can be active in educating and reassuring their non-high risk patients about AIDS. Third, if referred potential AIDS patients, "physicians can stick to the medical issues and not politicize the situation," Dr. Cohn stated.

The AMA Council of Scientific Affairs report, adopted by AMA delegates at the 1981 Interim Meeting, entitled "Health Care Needs of the Homosexual Population," and a recent report by the AMA House in June, provide some suggested guidelines, which include:

- Physicians should be educated in the taking of an adequate sexual history of their patients.
- Educational programs for homosexuals should be encouraged to acquaint them with diseases for which they may be at risk.
- Better information should be available for physicians and the public about clinics and physicians "who are willing to become involved with other health care providers to improve the health care of the homosexual population."

### Resources

The following are some resources available to physicians and their patients:

Gay and Lesbian Health Care Alliance, Denver, 777-9530.

Denver General Walk-in Clinic, 8th and Speer. Hours: 7:30 a.m. to 10 p.m.

Denver Metro VD Clinic, 605 Bannock, Denver, CO, 80204. Hours: 9 a.m. to 4 p.m.

Denver Disease Control Center, 893-7051

VD Control Program, Colorado Department of Health, 320-8333, ext. 6207

The College for American Pathologists has published a 16-page summary of AIDS precautions for clinic and laboratory staffs and recommendations for blood or component transfusions. For information write to:

AIDS Task Force, 7400 N. Skokie Blvd., Skokie, IL 60077

## How to be Insensitive

(Continued from p. 303.)

often will demoralize a patient or a family just as surely as any brutality. But it isn't a statutory crime. It isn't even listed as a violation of ethics, nor as negligent malpractice. It isn't humane, nor kind, nor a sign of professional maturity, but there is no curb and no penalty.

Perhaps in chasing after the prestige of specialty among all those bleeping machines a doctor may become one of them instead of their artful and professional master. Can we hope that he will be Mr. Hyde only briefly and emerge the kindly Dr. Jekyll forever? Perhaps he could with help from his professor and after some disappointing experiences with patients.

Stories like these are not rare. The only prevention is to produce physicians who are people first, who are interested to know and to respect the patient, quirks and all, personally through long association or through intensive and confidential interviews, with history, stories, examinations, humor and optimism. They must have sympathy for indignities they sometimes have to inflict on patients. Even a transient consultant should be able to achieve that; the personal physician should not have to be the sole protector and apologist.

When a patient is in trouble and and his physician feels that he is losing, he must be careful not to destroy the patient's right to hope. It is one of the last essential and fragile human emotions. When Pandora opened the legendary box (now we call it a can of worms) and all the biting and stinging creatures buzzed out into the world, Hope was the last winged thing to linger there. Pandora let it go without slamming shut the lid or squashing it with her thumb. We can at least honor her compassion and good judgment with our own. Let's be careful or at least quiet.

# Blood Bankers Set the AIDS Record Straight

*The Denver Metropolitan Area Blood Bank Directors: Bob Chapman, MD; Ben Galloway, MD; Renata Greenspan, MD; Don McClure, MD; Ed Orsini, MD; Phil Reynolds, MD*

The recent emphasis and focus of the national and local communications industry regarding Acquired Immune Deficiency Syndrome (AIDS) has resulted in a considerable amount of hysteria among prospective users of the health care system generally and more specifically related to the perceived dangers of blood transfusions. This widespread public concern has resulted in a series of new requests to blood banks by prospective blood recipients, their families and their friends.

Such requests have included directed donations for specific patients by family members and friends and pre-deposit blood donations by people for future transfusion needs, i.e., donating blood which will be frozen and reserved for that donor for the next three years.

The medical directors of the metropolitan area blood banks have met and discussed the ramifications of the AIDS problem as it relates to the health of the blood supply in our community. We felt that the people best qualified to provide advice to patients needing blood and to relate the benefits of blood transfusion versus the risks (specifically AIDS) are the physicians caring for their patients. Consequently, we felt an obligation to the physicians of our state to provide the best factual information known to us at this time in the blood bank community concerning the risks of AIDS being transmitted through blood transfusions.

First of all, it should be emphasized that blood donated in the Denver metropolitan area is donated 100 percent by volunteer blood donors. Secondly, all of the Denver area blood banks have initiated programs which educate donors about

AIDS and explain about those groups in our population which are at risk of potentially transmitting the AIDS vector. Obviously any persons who are identified in the high risk groups are asked to refrain from donating blood. **What about directed donations?** It is our opinion that directed donations will not reduce the risk of transfusion-transmitted AIDS. Logistically it is difficult for blood bank staffs to handle this request. The potential for clerical errors is greatly enhanced, increasing rather than decreasing the risks involved with blood transfusion. People designated for donation for a specific person are put under pressure to donate and may not be as truthful about their medical histories as random donors, further increasing the risks of transfusion.

For example, they may fear that hidden drug use or sexual practices might be discovered if they told of them when screened for donation. Finally, we feel this practice may disrupt current donation patterns, severely affecting the blood supply in our community to the detriment of patients.

**What about pre-deposit donations for future, unspecified potential transfusion?** Blood can easily be stored at 4°C for 35 days. Longer storage requires freezing at -65°C; logistically this is not possible or practical for future, undetermined transfusion needs. An additional concern, such as processing and storage, could more than triple the cost of blood from what it is today.

**What are the risks of transfusion-induced AIDS?** It is estimated that approximately three million people receive blood transfusions each year in the United States. Only about one percent of the patients with AIDS

have a history of prior blood transfusions. At this time only one of these cases has been shown to include a blood donor who later developed AIDS. This data indicate that the risk of acquiring AIDS from the usual transfusion must not be more than one in a million.

To conclude, we must reemphasize that good transfusion practices require a clear indication for transfusion therapy with a clear understanding that there are potential risks involved with transfusion so that the benefits should always clearly outweigh the risks. 

## Rehabilitation Groups of the American Cancer Society

### Reach to Recovery

Reach to Recovery is a rehabilitation group for women who have had breast surgery. It is designed to help them meet their physical, psychological, and cosmetic needs. Volunteers, who have been selected by their doctors and have completed training, visit the patients in the hospital with the physician's approval. No medical advice is given but compassion and emotional support are available.

# Disability Income Insurance Available from CMS

## CMS New Membership Insurance Plan

Health/Hospital

Practice Overhead

Disability

Estate Planning

Return of Dues

Life

This is the third article in *Colorado Medicine* detailing the specifics of an entirely new personal and business insurance plan available to CMS members. William Smith and Michael Prostrullo are the authorized benefit consultants for the Colorado Medical Society program and the authors of the accompanying article.

Messrs. Smith and Prostrullo will continue to provide articles and updates on information concerning this insurance program. It is anticipated that the lengthy research and planning which have gone into this plan will produce an effective, cost-saving insurance program for CMS members. If you would like more information about this new insurance program, contact the CMS member services office, 321-8590.

In the April issue of *Colorado Medicine*, we discussed the physician's need for practice overhead insurance to pay his or her professional expenses during a period of disability. We emphasized the need to have overhead insurance in addition to disability income insurance. What then is the purpose of disability income insurance?

Disability income insurance provides security against the financial damages incurred when sickness or injury interrupts a physician's practice and cash flow. It is meant to pay personal expenses when a physician is disabled by accident or injury. Disability income insurance and overhead income insurance complement each other. Disability coverage insures your earning income while office overhead protection insures your ability to maintain an office during an absence due to sickness or disability. One works to protect your practice; the other to protect your home, family and investments.

Or at least it should. Unfortunately this is not always true.

Unless your disability coverage has both a sufficient benefit amount and the proper terms and provisions the chances are it will not do what you intended it to do.

Competitive practices, growing consumer awareness and medical advances have brought about dramatic contractual changes that provide substantially greater protection than that found in policies issued as recently as two years ago.

Premiums may be different from company to company, but the cost of risk does not change. If you are considering the purchase of a policy that appears to be priced significantly less than the others, beware, for

the insurance company has no doubt carved out some risk that has been hidden in contract language. The more an insurance company protects itself, the less it protects you.

A contract for a physician should satisfy the following criteria:

1. It should contain both total and partial disability coverage.
2. It must have a "your occupation," "regular occupation," or "his occupation" definition of disability.
3. It must have benefits that are payable for life.
4. It should have a guaranteed insurability option allowing you to purchase more insurance in the future regardless of your health.
5. It should not require total disability to precede partial disability.
6. It must protect against inflation. Both the benefit and predisability earnings should increase while the physician is disabled.
7. It must allow sufficient indemnity. If your gross annual income exceeds \$250,000, the maximum coverage needed must be equal to fixed living expenses and all long term financial commitments, including tax shelter funding obligations.

The new Colorado Medical Society plan addresses each one of these important points.

Total and partial disability benefits are provided with a "your specialty" definition of occupation. Total disability means that because of injury or sickness the insured cannot perform a substantial part of the duties of his occupation. If the insured is forced to leave his specialty, but returns to practice in another area, he will receive the full benefit.

Partial or residual benefits are paid

when, as a result of injury or sickness, the physician suffers a loss of income of 20 percent or more. The amount that is paid is the percentage of your policy benefit that equals the percentage of income loss. Any loss greater than 80 percent is considered a total loss and the full benefit is paid.

It is important that residual or partial disability requires only loss of income. There is no requirement or mention of loss of duties or time to qualify for the benefit.

A unique contract provision waives the requirement of continued medical care if your physician feels continued care is of no benefit.

Any member who secures a plan before he reaches the age of 50 is eligible for lifetime benefit. Members over age 50 may still secure benefits payable to age 65.

Guaranteed insurability options allow you, depending on your age, to purchase increased monthly benefits up to three times the original face amount of the policy, regardless of your health.

There is no requirement that total disability must precede partial disability. Partial disability is payable to age 65. Often overlooked by an insured, but critical at claim time, is the basis for determining income loss. The CMS plan allows you to establish the basis by selecting either the 12 working months prior to disability or the average monthly income of the two highest consecutive months of the last five years.

Inflation protection is also provided. Both the benefit and pre-disability earnings are adjusted annually for inflation during the claim period. Increasing the pre-disability earnings preserves the basis for "percentage of loss." Increasing the benefit preserves the value of the purchasing power of the benefit.

No upward limit has been placed on the amount of indemnity that will be issued to a CMS member physician. The underwriting of unearned income and net worth is of increasing importance today. While financial underwriting has always been a significant factor, it is equal to and in some instances more important than medical underwriting.

Unearned income, from investments, trusts, etc., will continue, regardless of your disability; also, a

large net worth on the part of the insured, not currently producing income, may become income in the future. However, you must consider how to protect your non-income related assets from being depleted if you become disabled and are no longer able to work.

The CMS insurers will consider the following factors when presented with an insured's net worth or unearned income.

#### Favorable

- Age less than 50
- Net worth less than \$4 million
- Non-liquid assets
- Large portion of net worth invested in insured's residence
- Large portion of net worth invested in own business, requiring applicant's personal attention
- Net worth from earned income

#### Unfavorable

- Age over 50
- Net worth in excess of \$6 million
- Highly liquid assets -Inherited net worth

- Large outside business investments
- Net worth in large business capable of continuing in insured's absence
- Substantial unearned income already being generated
- No current disability coverage in force
- Unearned income exceeds 15% of earned income

When the insured's net worth exceeds \$4 million, long term benefits are not usually available. When the net worth exceeds \$6 million, coverage will usually not be available.

It is obvious from the above factors that complete details of assets, liabilities and all sources of earned and unearned income will influence the decision of whether and how to insure the client. Generally, the more information available from the insured, the more favorable the decision will be.

## Help Available to Impaired Physicians

The Colorado Medical Society has had an impaired physicians program for several years, at the direction of the CMS House of Delegates. The program is designed to assist physicians to confront their problems and find help. Physicians, family members and others also may gain access to the program by contacting the staff of the Division of Professional Relations and Medical Service at the CMS office in Denver, 321-8590. Physicians wishing to assist with the program are urged to contact the committee by calling 321-8590.

#### The members of the committee are:

Aurora	David R. Rice, MD	343-4655
Boulder	John S. Avery, MD	440-3088
Denver	Edmund Casper, MD	893-7377
Durango	Telford A. Davis, MD, Chairman	259-0094
Englewood	N. Kenneth Furlong, MD	789-6550
Grand Junction	Richard E. Troy, MD	242-7697
La Junta	Paul T. Yoder, MD	384-8766
Loveland	John K. Nagel, MD	667-2112
Pueblo	Lawrence E. Austin, MD	542-5250
Windsor	Barry R. Berns, MD	686-7611

**If you know of a colleague who has problems with drug or alcohol dependency, or if you think you may have a problem, talk to one of the members of the CMS Physician Health and Rehabilitation Committee.**

# Can A Computer Save You Money?

*This article is third in a series designed to provide the physician and medical office staff with a better understanding of computers, guidelines to use in determining if a computer would be beneficial to your practice and practical advice on selection of computer software and vendors. The author, Sherri Bruhn, is a medical office management consultant. Her experience with computer systems includes installing systems as end-users, software evaluation, system support and training.*

In the previous articles we discussed basic computer hardware and software and explored some of the applications for the computer in a medical practice. But how does one decide if a computer is a viable tool for increased efficiency, profitability, speed or control? How is

the computer cost-justified?

Areas of application for the computer in a medical practice may be broken down into three categories: accounting, word processing and data management/analysis. The decision to acquire a computer should be based on the anticipated effect

on each of these areas within the practice. To effectively forecast what these effects may be, evaluation is the first step.

Analyze each aspect of your practice, defining the strengths and weaknesses of its operations; target areas for possible improvement. The following questions should help clarify whether the most common problem areas are of concern in your practice.

## Accounting

1. Does the front office run smoothly? Are patient financial records well-organized and easy to find?
2. Are patients provided with a current reckoning of their account as they leave the office?
3. How many statements are prepared each month? Do they leave the office in a timely manner?
4. Are outstanding accounts balanced to general ledger records? How often?
5. What is the value of outstanding accounts? How much is written off as uncollectible each year?
6. How often are insurance claims prepared and submitted?
7. How often are insurance claims tracked? aged?
8. When are delinquent accounts followed up, after 30, 60 or 90 days?

## Word Processing

1. Does correspondence leaving the office convey the professional image you wish to impress on clients and colleagues?
2. Are recall notices, appointment reminders and referral acknowledgments prepared routinely? Does this correspondence produce the desired results of maintaining the existing practice and/or development of the future practice?

## Data Management/Analysis

1. Are financial statements used in managing the practice? How often?
2. Are current production levels analyzed?
3. Is the fee schedule analyzed regularly to maintain profitability?
4. Are patient treatment histories organized in such a manner that they may be used for future reference?

**Note:** The idea that a computer will solve the problem of messy record-keeping or carelessness is folly.

Once you have analyzed your practice and defined the areas which warrant improvement, determine why improvement is needed. Is the current system adequate? Is it well-defined and clearly understood by the office staff? Is the staff capable of handling the workload?

Often there just aren't enough hours in the day to accomplish all the necessary tasks. This is one area in which the computer may be expected to make drastic improvements. If additional staff were hired to take up the slack, what would the job description be? Is it a job which the computer can perform? If not, is it possible to reorganize job responsibilities to create a job for the computer?

Here are some office functions which the computer could perform: update patient accounts; prepare and balance daily summaries; prepare insurance claims; reconcile accounts at month's end and prepare statements; produce an analysis of accounts receivable, production and profitability; prepare financial statements and referral acknowledgments. What would the expense of an additional staff person be to perform the duties you have outlined? Don't forget to figure FICA and unemployment taxes, and benefits if you're describing a full-time position.

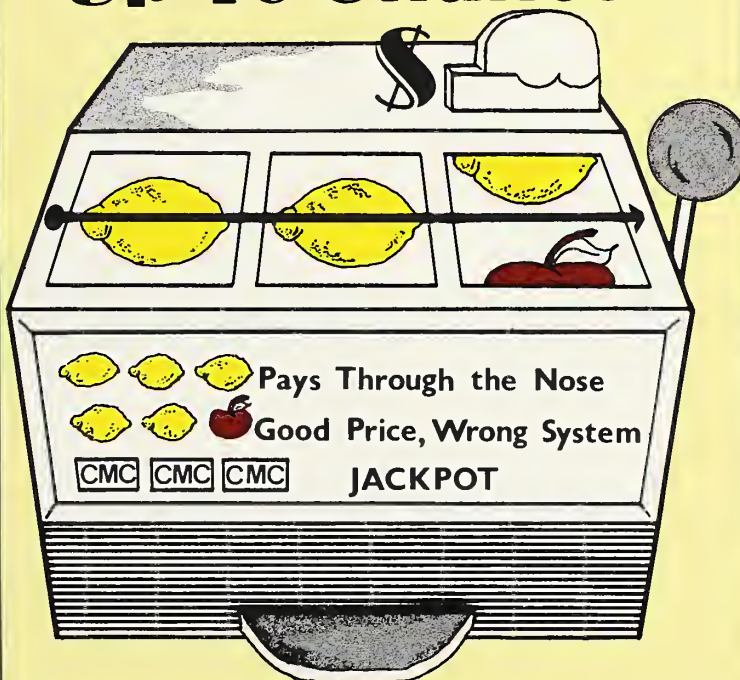

Are you currently making use of an outside service? Are these services which the computer can perform in whole or in part? If so, the monthly expense of the service may also be added to your computer budget.

Areas which are difficult to evaluate, but which must be considered are cashflow, collections and patient volume.

Does your practice wait for payment from your patients' insurance carriers? This may be a service to the patients, but what is the expense to the practice? How much time lapses between preparation of the H.I.C. form and receipt of payment?

This lapse may be anywhere from four to eight weeks in an extremely well-managed practice. Can the computer be expected to make improvements? Absolutely. Insurance carriers prefer to work with the standard H.I.C. form. Why? It's their own form, to begin with. They all

## Don't Leave Your COMPUTER SYSTEM Up To Chance!

Buying a computer system  
shouldn't be a gamble,  
rather a decision based on  
facts.

Please circle #13 on Reader Service Card.

look the same and when properly completed, all the necessary information is provided. Can you imagine the difficulty carriers have in dealing with hundreds of different superbills? And the handwriting on some of them would challenge a first-grade teacher!

Computer-prepared insurance forms offer many advantages: they are neatly typed, accurate (once your computer files are accurate) and available without delay.

What is the average value of outstanding claims to your practice? If you were able to realize an improvement of 20 or 25 percent in turnaround through the use of computer-printed H.I.C. forms, capital that would otherwise be "frozen" is now available for other use. If this capital were to be invested at an annual rate of 10 percent, what would the interest income be?

Improved bill collections is another area for "intangible" improvement. The national average collection percentage for 1982\* ranged from 93 to 96 percent. What is the rate of collection in your practice? What would the increased income be if this rate were improved by a percentage point or two?

The computer can provide greater control over the follow-up of delinquent accounts. Accounts receivable, aging and delinquency (30, 60, 90 days past due) reports are invaluable tools in this, as are computer-generated form letters to responsible parties.

Finally, increased patient volume must be given consideration. If the front office were to run more smoothly, would it be possible to schedule one or two more patients a week? And for the growing practice, written acknowledgment of referrals, from both colleagues and existing patients, are excellent methods of gaining more referrals. Referral acknowledgment, new pa-

tient correspondence or announcements of new developments in the practice, such as a move to new offices or a new associate, are simple tasks for the computer.

Once you have targeted the areas you wish to improve, determine the current cost of managing the practice. Include all expenses for tasks which will be performed by the computer, including reallocation of full and part-time staff resources, taxes associated with payroll, employee benefits and outside services. Add to this figure the anticipated expense of making necessary improvements. You now have a figure to use for comparison.

Now, how much does the computer cost? That's a difficult question to answer. Each practice has different requirements. Where one practice may need only 10 megabytes (that's 10 million characters) of permanent disk storage, another may need 40 megabytes. One practice may wish to use the computer for patient scheduling in addition to other functions, thereby requiring an additional CRT (screen and keyboard), while another will use the computer

---

## Consultation with an accountant is advisable.

---

for patient billing and only needs one. The number and type of printers selected will also make a significant difference.

The size and configuration (number of CRTs and printers) of the computer should be based on a specific survey of your individual practice requirements. The selection of the amount of permanent disk storage should be based on calculations showing the approximate size of each file to be stored. These calculations will use information about the practice, such as the number of patient records, patient load, number of providers, average number of procedures and pay-

ments for each patient and so on.

Other expenses to consider, which may be included with the system, are training, installation and implementation assistance.

Once you have the cost of the computer hardware and software, there are on-going expenses. The computer will require supplies, such as printer ribbons, floppy diskettes or magnetic tape cartridges, forms and paper (continuous, perforated paper with tractor holes on each side). Estimate the monthly usage of these supplies to arrive at a monthly amount. (Don't forget to add supplies to the summary of current expenses if they will be replaced by computer supplies.)

Maintenance is another on-going expense. Like any other piece of equipment, the computer will require maintenance to insure trouble-free operation. Inquire about maintenance for the software, too. When and how will the software be modified or enhanced?

Finally, arrive at a monthly expense for the computer itself. In order to do this, the life expectancy of the computer must be defined. The properly configured and maintained computer will perform its specified functions for a period of at least five years. Coincidentally, Uncle Sam utilizes a five-year "useful life" for purposes of depreciation.

If the investment will be borrowed, include the interest payment in the monthly expense. If the computer is leased, the monthly expense will be the lease payment itself. If the computer is purchased outright, divide the total investment by the useful life of the computer, including interest if appropriate.

For purposes of illustrating one method (there are many) of determining the monthly cost of the system, we will use a computer investment of \$15,000.00 for our example. The system is configured with a 10 megabyte winchester hard disk, one CRT, one dot matrix printer, training and installation. (Note: this system may range from \$10,000 to \$20,000.) Such a system might be appropriate for the practice with 5000-6000 patient files, a patient load of 25 per day and an average three transactions (including payment) per patient.

Our example system is installed in

---

\*These averages are based on net income, i.e. total production less adjustments for Medicare, Medicaid, etc. and are derived from actual medical practices which make use of professional management consultants. This information was provided by Rocky Mountain Professional Consultants, Inc.

September and the investment is amortized over five years at 14 percent annual interest. Loan installments of \$396.00 begin in the same month. Additionally, we assume that the system carries a 90 day warranty, after which time the system maintenance will be \$170.00 per month. Supplies are estimated to average \$75.00 per month.

To determine the out-of-pocket expenses (cash outlay) for the computer during the remainder of 1983, add together four installments, system maintenance (one month), and four months of supplies. (See Table 1 at end of article.)

As it is, these figures probably don't compare favorably with the current expenses of a practice in a similar situation. However, we do not yet have a true representation of the computer expense. Current expenses in such a practice are for payroll, payroll taxes, outside services, etc., and are treated as regular expensable items on the tax return. The acquisition of a computer is in most cases a purchase of equipment (leases are different) and special tax laws prevail.

First, the federal government allows what is known as an investment tax credit (ITC) on purchases of equipment. This tax credit is like a rebate in that it is deducted from the payable income tax (not shown as an expense) on the tax return for the year of purchase. The federal ITC is calculated at 10 percent of the purchase price of the system. Additionally, the state of Colorado allows for an ITC of 10 percent of the federal ITC. Overall, this is a tax credit of \$1650.00.

Second, depreciation on purchases of equipment may be taken as an expense. Using ACRS (Accelerated Cost Recovery System) depreciation rules, the system is depreciated at 15 percent in the first year, 22 percent the second year and 21 percent the remaining three years. The depreciable base is the total investment less one half of the ITC (state and federal). Therefore, depreciation expense in the first year is:

$$(\$15,000.00 - \$825.00) \times 15\% = \$2,126.00$$

and depreciation in the second year is:

$$(\$15,000.00 - \$825.00) \times 22\% = \$3,119.00$$

So, in order to truthfully represent the monthly computer expense, we must include the ITC and the reduction of income tax due to all associated expenses (depreciation, interest maintenance and supplies). (See Table 2.)

In order to determine the reduction of income tax resulting from computer expenses, take the total expense figure times the rate at which income is taxed. We will use 30 percent. (See Table 3.)

We now have an accurate figure to use for comparing the cost of the computer to current expenses. In fact, in the first year, using this example, it actually makes the practice money!

If, in our example, current expenses are \$650.00 per month, the actual monthly expense would be \$455.00 (expenses less reduction in income tax) — almost the same as the computer.

If the practice in question stood to benefit in the areas of cash flow and collections, or if the practice were in a growth stage, the question of whether to computerize would be simple.

However, each practice is different. In some cases, leasing is preferable to a purchase. Consultation with an accountant is advisable to determine the best method in a particular situation.

Following articles will provide information about specific features to look for when evaluating software and information on how to select a computer vendor.

## December

**1 Neuropsychiatric Grand Rounds** — 1-3 pm, Conference Room "A", Colorado State Hospital, 1600 W. 24th St., Pueblo, Colorado 81003. APA Approved for Category 1 credit. Examine the relationship of neurological and psychiatric disorders. Contact James H. Scully, MD. Phone: (303) 543-1170.

**2 Contemporary Issues in Adolescent Health Care** — Sheraton Inn Lakewood, Denver, Colorado. Sponsor: Children's Hospital, Department of Nursing Education and Research, and The Psychiatric Consultation and Liaison Service, Department of Behavioral Sciences. 6.5 hours of Continuing Education credit. Fee: \$65.00. Call (303) 861-6949 for more information.

**7-10 An International Symposium on the Basic Mechanisms of the Epilepsies** — Kona Kai Club, San Diego, California. Fee prior to September 2 is \$160.00 for physicians and \$120.00 for nurses. After September 2 add \$10.00. 14 hours credit AMA Category 1 and California State Board of Registered Nursing. Contact Nursing, Health Sciences, UCLA Extension, P.O. Box 24901, Los Angeles, California 90024. (213) 825-5671.

**8-10 The Management of Patients with Burn Injuries** — Brown Palace Hotel, Denver, Colorado. 18 hours credit AMA Category 1. AAFP, ACEP and CNA credit approval requested. Contact Dr. John A. Boswick, 4200 E. 9th Ave., Box C-309, Denver, Colorado 80262. Phone: (303) 394-8718.

**8-10 National Conference on Advances in Cancer Therapy** — Waldorf-Astoria Hotel, New York, New York. Credit: 16.5 hours AMA Category 1; 16.5 hours AMA Category 2-D; 15 hours AAFP prescribed. Contact Nicholas G. Bottiglieri, MD, Advances in Cancer Therapy Conference, American Cancer Society, 777 Third Ave., New York, N.Y. 10017. Phone: (212) 371-2900.

**9-10 Allergy and Asthma: 5th Annual University of California Course on Allergic and Asthmatic Diseases** with Dr. Hyman Chai and Dr. Martin Valentine — Capitol Plaza Holiday Inn, Sacramento, California. 16 hours credit AMA Category 1. Tuition \$195.00 for physicians and \$95.00 for all others. Contact Ms. Jane Johnson, Office of Continuing Medical Education, School of Medicine, TB-150, University of California at Davis, Davis, California 95616. Phone: 752-0328.

**9-10 Genetics, Birth Defects and the High Risk Patient: Practical Applications** — Capitol Plaza Holiday Inn, Sacramento, California. 10 hours AMA/CMA Category 1 credit. Tuition \$115.00 for physicians and \$65.00 for all others. Contact Ms. Jane Johnson, Office of Continuing Medical Education, School of Medicine, TB-150, University of California at Davis, Davis, California 95616. Phone: 752-0328.

**10 Anxiety Disorders** — Hyatt Regency at Crown Center, 2345 McGee, Kansas City, Missouri. AMA and AAFP credit available. Fee: \$25.00. Contact Jan Johnston, Office of Continuing Education, University of Kansas Medical

Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4488.

**10-14 10th Annual Symposium on Ear, Nose and Throat Diseases in Children - A 1983 Update** — The Breakers, Palm Beach, Florida. 17 hours CME Credit. Tuition \$250.00 for physicians and \$185.00 for residents. Contact the Department of Otolaryngology, Children's Hospital of Pittsburgh, 125 DeSota St., Pittsburgh, Pennsylvania 15213. Phone: (412) 647-5465.

**12 Kidney and Urological Diseases: New Trends** — Kansas City, Kansas. Battenfeld Auditorium, University of Kansas Medical Center, 39th and Rainbow Blvd. Sponsor: University of Kansas College of Health Sciences and Hospital. 6 hours AMA and AAFP credit. Contact Jan Johnston, Office of Continuing Education, University of Kansas Medical Center, Rainbow at Olathe Blvd., Kansas City, Kansas 66103. Phone: (913) 588-4480.

**13-16 Sexually Transmitted Diseases** — Prince Kuhio Hotel, Honolulu, Hawaii. 16 hours AMA Category 1 credit. Contact Yvonne Brewer, MPH, Education Director, The Honolulu Medical Group Research and Education Foundation, 550 S. Beretania Street, Honolulu, Hawaii 96813. Phone: (808) 537-2211, ext. 751.

**17 6th Annual Winter Seminar, Selective Reviews in Medicine** — Aspen, Colorado. 35 hours AMA Category 1. Contact Carol M. Betts, Travel Coordinator, Dade County Medical Association, 1501 N.W. North River Drive, Miami, Florida 33125. (305) 324-8717.

## January

**5 Neuropsychiatric Grand Rounds** — 1-3 pm, Conference Room "A", Colorado State Hospital, Pueblo. APA approved course for Category 1 credit. Examine the relationship of neurological and psychiatric disorders. Contact James H. Scully, MD, Colorado State Hospital, 1600 West 24th St., Pueblo, Colorado 81003. Phone: (303) 543-1170.

**7-14 General Medicine - Current Clinical and Legal Issues** — Marriott's Mark Resort, Vail, Colorado. 22 hours AMA Category 1, AAFP prescribed and Colorado Nurses Association Credit. Tuition: \$335.00 for practicing physicians and \$225.00 for residents, nurses and other health professionals. Contact Beth Israel Conference Program, P.O. Box 11338, Denver, Colorado 80211. Phone: from within Colorado - 629-5333 or toll free from outside Colorado - (800) 525-5810.

**10-15 13th Annual Pediatric Postgraduate Course** — Pierre Marquez Hotel, Acapulco, Mexico. Tuition \$185.00. 18 hours AMA Category 1 credit. Contact Ann J. Boehme, Continuing Education Coordinator, Long Island Jewish-Hillside Medical Center, 400 Lakeville Road, New Hyde Park, New York 11042. Phone: (212) 470-2114.

**14-20 Update on Regional Anesthesia** — Village Square Conference Center, Copper Mountain, Colorado. 17½ hours AMA Category 1 credit. Contact the Office of Postgraduate Medical Education, University of Colorado School of Medicine, 4200 East 9th Ave., Box C-295, Denver, Colorado 80262. Phone: (303) 394-5241.

*Publication of any advertisement in Colorado Medicine is not an endorsement by the Colorado Medical Society of the product or service. Colorado Medicine magazine is the official journal of the Colorado Medical Society, but as such is also authorized to carry General Advertising.*

## PROFESSIONAL OPPORTUNITIES

**FAMILY PRACTICE:** Outstanding opportunity for BE/BC F.P. with a dynamic, young group practice. Located in exceptionally clean and safe city of 175,000; home of state capitol and university. Full fringes; salary commensurate with experience. Send inquiry and resume to: Dr. Kongstvedt, Health Central, 17th and "N," Lincoln, Nebraska 68508. Phone (402) 475-7000. 1083-1-4b.

**GENERAL SURGEON** needed in Vail, Colorado. Young, progressive medical staff; full-service hospital linked to major medical center in Denver. Send resume to Administrator, Vail Valley Medical Center, 181 W. Meadow Drive, Vail, Colorado 81657. 1083-1-2b.

**PROFESSIONAL RESOURCES** offers for sale a cross-section of successful general and specialty practices across the state of Colorado, including possible associateships. For information, please call Michael Aronson, MD, Professional Resources, 602 Park Point Drive, Golden, Colorado 80401. (303) 526-9510. 1083-1-3b.

**BOULDER, COLORADO:** Needed: OB/GYN (female preferred), Family Practitioner or Pediatrician. Call 1-303-443-8880 or 1-303-443-8568. 983-1-3b.

**RADIOLOGY** — Progressive JCAH-accredited Medical Center in Colorado needs radiologist February, 1984. Must be proficient in all diagnostic areas including ultrasound and CT scan. Contact Administrator, La Junta Medical Center, 1100 Carson, La Junta, CO 81050. 983-1-3b.

**BUSY INTERNIST** seeks associate with subspecialty interest in cardiology. E. Eugene Miller, MD, (303) 596-0600. 1083-1-3b

**INTERNAL MEDICINE PRACTICE FOR SALE:** Active, growing practice in

Lakewood; some optional oncology practice also available; ideal for new practice or expansion; flexible terms. Contact: A.L. Beers, Jr., MD, 6900 W. Alameda Ave., Suite 109, Lakewood, CO 80226 (303) 922-8309. 983-1-6b.

## SITUATIONS WANTED

DO, GP, CERTIFIED, desires part time employment or practice while own new practice is growing. Must be within commuting distance from Denver. Write: Employment, 4860 W. 102 Ave., Denver, CO 80030 or call 469-1279. 1083-1-2b.

**ENERGETIC YOUNG GENERAL INTERNIST,** ABIM, Denver native, wishes to relocate practice to Colo. Group or partnership. Well-trained. Steve Gorshow, MD, 600 N. McClure Ct., #1611, Chicago, IL 60611 (312) 944-7123. 983-1-2b.

**PH.D. FROM CALTECH** desires position in lab-academic or industrial. Presently Assist. Prof. at USC in Immun. & Biochem: Specialty — flow cytometry. PI on grant. Supervising techs & students. Contact A. Bakke, USC Med. Sch.-HMR 711, 2025 Zonal Ave., LA, CA 90033. 983-1-2b.

**COLORADO BOARD CERTIFIED FAMILY PRACTITIONER,** 32 years old, desires to relocate in Colorado, Wyoming or New Mexico. Prefer association with 1-4 FPs or FPs/surgeon. Enjoys all aspects of family medicine, especially OB, surgery, orthopedics. Detailed inquiries to: MD, P.O. Box 2403, Pueblo, CO 81004. 983-1-3b.

**SINGLE, NON-SMOKING OFFICE MANAGEMENT ASSISTANT** seeking full-time position in medical office. Willing to work any hours. Reliable and loyal. Expert typing and accounting skills. Knowledge of reports required by professionals. Requirements: \$500/month with a 3-year contract, desk top workspace, comfortable environ-

ment, and clean power supply. DBS Medical System 692-9794. 483-1-7b.

## PROPERTIES

**WINTER PARK — FRASER VALLEY** — Solar envelope townhome in Fraser, Colorado. 10 min. from Winter Park Ski Area; 15 min. from Silver Creek. Year around resort area. Two BR, 2 bath; 2-story greenhouse with hot tub. Beautifully and completely furnished including full component stereo, cable color T.V., washer, dryer, luxury kitchen, and tastefully selected furniture, art, and accessories. Beautiful views of Byers Peak and the Continental Divide. Current loan of \$102,000 assumable at 14.25%, 30 yr. fixed. Will sell furnished for \$137,500 or will take a partner for joint ownership. Creative financing. Excellent value for many reasons. Call (303) 697-9626 evenings for details. 1083-1-1b.

**SMALL OFFICES AVAILABLE NEAR CU MEDICAL CENTER.** Reception and phone answering included in rent from \$250-\$310. Secretarial Service in building. Full service. Call Brown and Associates, 758-7541. 1083-1-1b.

**FOR SALE, UNIQUE OFFICE SPACE** in central Lakewood. Newly available 1700+ sq. ft., off st. parking (6), attractive home on 13,000+ sq. ft. lot. 1400 Kipling Crest Realty 238-7333. 1083-1-1b.

**DOCTORS WANTED.** 2 different spaces, 1500 sq. ft. and 3200 sq. ft., in fast-growing north Denver neighborhood. Convenient to St. Anthony's North and Valley View hospitals. Call or see Al Clay at Clay Drug, Sunrise Shopping Center, 9297 N. Federal. 426-8901. 983-1-2b.

**PRES-AURORA MEDICAL BLDG.** OFFICE SPACE for sublease one or more days per week. Includes office management, phone furnishings, and personnel. Contact Richard G. Luzietti, MD, PC. 360-0312. 983-1-2b.

WINTERWOOD TOWNHOMES, Steamboat Springs, 2 bedrooms, 3 baths, atrium whirlpool, sauna. Simply the finest luxury environment. Priced under \$200,000.00. Stay in one while you decide. Brochure available. Call Saffell and Associates, Dennis, 893-6648, Broker. 983-1-3b.

#### MISCELLANEOUS

CARLA'S CLEANING SERVICE — 695-3845 — "Cleaning with a Personal Touch" Reasonable, Reliable, Bonded. Have your office or home "cleaned with a personal touch." 695-3845. 1083-1-1b.

PHYSICIANS SIGNATURE LOANS TO \$50,000 — Up to 7 years to repay. Competitive fixed rate with no points, fees or charges of any kind. Prompt, courteous service. No prepayment penalties. Physicians Service Assn., Atlanta, GA. TOLL FREE (800) 241-6905. 983-1-2b.

1984 CME CRUISE/CONFERENCES ON LEGAL-MEDICAL ISSUES — Caribbean, Mexican, Hawaiian, Alaskan, Mediterranean. 7-14 days in Winter, Spring, Summer. Approved for 18-24 CME Cat. 1 credits (AMA/PRA). Distinguished professors. FLY ROUNDTRIP FREE ON CARIBBEAN, MEXICAN & ALASKAN CRUISES. Excellent group fares on finest ships. Registration limited. Pre-scheduled in compliance with present IRS requirements. Information: International Conferences, 189 Lodge Ave., Huntington Station, NY 11746. (516) 549-0869. 883-1-4b-TS.

#### PERSONALS

PARTNER WANTED: Tax shelter, safety, cash flow-depreciation, no risk or management problems. Excellent return on investment. For more details call 320-7845. Ask for John Lynch. 629-1-7b.

#### FOR SALE OR RENT

EQUIPMENT FOR SALE: Three bedside tables, three utility tables, oak bookshelf, secretary desk, Mayo stand, goose neck lamp, coat rack, two cidex boats. Gerard G. Koehn, MD, 3210 North Academy, Colorado Springs, Colorado 80907 (303) 574-0310. 1083-1-1b.

USED TECHNICARE Delta Scan 25, Head CT Scanner. Excellent condition. Available 1983. Price negotiable. (303) 399-1120. 983-1-2b.

#### PROFESSIONAL SERVICES

PROFESSIONAL MARKETING: Effective solutions to crucial issues facing your practice. Our services include: marketing consultation, competitive analysis, public relations, advertising and demographic research. Sandra E. Lamb & Assocs. 973-3169. 1083-1-1b.

## RU-TUSS® II

### sustained release capsules

Before prescribing, see complete prescribing information. The following is a brief summary.

**DESCRIPTION:** Each sustained release capsule contains 12 mg of Chlorpheniramine Maleate, USP and 75 mg of Phenylpropanolamine Hydrochloride, USP in a base to provide prolonged activity.

**INDICATIONS:** For the treatment of the symptoms of seasonal and perennial allergic rhinitis and vasomotor rhinitis, including nasal obstruction (congestion).

**CONTRAINDICATIONS:** Hypersensitivity to any of the components, concurrent MAO inhibitor therapy, severe hypertension, bronchial asthma, coronary artery disease, stenosing peptic ulcer, pyloroduodenal or bladder neck obstruction. Do not use in children under 12 years.

Do not use this drug in patients with narrow-angle glaucoma, obstructive or paralytic ileus, intestinal atony of the elderly or debilitated patient, unstable cardiovascular status in acute hemorrhage, severe ulcerative colitis, toxic megacolon complicating ulcerative colitis, myasthenia gravis. Do not use in nursing mothers.

Use in treating lower respiratory tract symptoms, including asthma, is contraindicated.

**WARNINGS:** Caution patients about activities requiring alertness (e.g., operating vehicles or machinery). Antihistamines are more likely to cause dizziness, sedation, and hypotension in elderly patients. Patients should also be warned about the possible additive effects of alcohol and other CNS depressants.

**Usage in pregnancy:** Safe use in pregnancy has not been established. Use only when the potential benefits have been weighed against the possible hazards to the mother and child. Note that an inhibitory effect on lactation may occur.

**PRECAUTIONS:** Use with caution in patients with a history of bronchial asthma, increased intraocular pressure, hyperthyroidism, cardiovascular disease, hypertension, hiatal hernia with reflux esophagitis, intestinal atony of the elderly or debilitated intestinal obstruction, myasthenia gravis, renal function impairment, and ulcerative colitis (severe).

**Drug Interactions:** MAO inhibitors, Alcohol or CNS depressants, especially anesthetics, barbiturates, and narcotics.

**ADVERSE REACTIONS:** Prolongs the response to nervous stimulation, potentiates the response to norepinephrine, and inhibits the response to tyramine.

Slight to moderate drowsiness occurs relatively infrequently with Chlorpheniramine Maleate. Other possible side effects common in antihistamines in general include perspiration, chills, dryness of mouth, nose and throat.

**Cardiovascular System:** Hypotension, headache, palpitations, tachycardia, extrasystoles.

**Hematologic System:** Hemolytic anemia, thrombocytopenia, agranulocytosis.

**Nervous System:** Sedation, dizziness, disturbed coordination, fatigue, confusion, restlessness, excitation, nervousness, tremor, irritability, insomnia, euphoria, paresthesias, blurred vision, diplopia, vertigo, tinnitus, acute labyrinthitis, hysteresis, neuritis, convulsions.

**Gastrointestinal System:** Epigastric distress, anorexia, nausea, vomiting, diarrhea, constipation.

**Genitourinary System:** Urinary frequency, difficult urination, urinary retention, early menses.

**Respiratory System:** Thickening of bronchial secretions, tightness of chest and wheezing, nasal stuffiness.

**DOSAGE AND ADMINISTRATION:** Dosage should be individualized according to the needs and response of the patient. Adults: one capsule every 8 to 12 hours not to exceed 3 capsules daily. Not for use in children under 12 years of age.

**OVERDOSAGE:** Treatment of the signs and symptoms of overdosage is symptomatic and supportive. In the event of overdosage, emergency treatment should be started immediately.

**Treatment:** The patient should be induced to vomit, even if emesis has occurred spontaneously. Vomiting by the administration of ipecac syrup is a preferred method. However, vomiting should not be induced in patients with impaired consciousness. Stimulants (analeptic agents) should not be used. Vasopressors may be used to treat hypotension. Short-acting barbiturates, diazepam or paraldehyde may be administered to control seizures. Hyperpyrexia, especially in children, may require treatment with tepid water sponge baths or a hypothermic blanket. Apnea is treated with ventilatory support.

**HOW SUPPLIED:** Green and clear capsules with green and white beads. Bottles of 100 tablets. NDC 0524-0031-01

Store at controlled room temperature 15-30°C (59°-86°F.).

**CAUTION:** Federal law prohibits dispensing without prescription.

# An added complication... in the treatment of bacterial bronchitis\*

## Brief Summary. Consult the package literature for prescribing information.

**Indications and Usage:** Ceclor® (cefadroxil, Lilly) is indicated in the treatment of the following infections when caused by susceptible strains of the designated microorganisms:  
Lower respiratory infections, including pneumonia caused by *Streptococcus pneumoniae* (*Diphtheria pneumoniae*), *Haemophilus influenzae*, and *S. pyogenes* (group A beta-hemolytic streptococcus). Appropriate culture and susceptibility studies should be performed to determine susceptibility of the causative organism to Ceclor.

**Contraindications:** Ceclor is contraindicated in patients with known allergy to the cephalosporin group of antibiotics.  
**Warnings:** IN PENICILLIN SENSITIVE PATIENTS, CEPHALOSPORIN ANTIBIOTICS SHOULD BE ADMINISTERED CAUTIOUSLY. THERE IS CLINICAL AND LABORATORY EVIDENCE OF PARTIAL CROSS-ALLERGENICITY OF THE PENICILLINS AND THE CEPHALOSPORINS AND THERE ARE INSTANCES IN WHICH PATIENTS HAVE HAD REACTIONS, INCLUDING ANAPHYLAXIS, TO BOTH DRUG CLASSES.

**Antibiotics:** including Ceclor, should be administered cautiously to any patient who has demonstrated some form of allergy, particularly to drugs.

Pseudomembranous colitis has been reported with virtually all broad-spectrum antibiotics (including macrolides, semisynthetic penicillins, and cephalosporins); therefore, it is important to consider its diagnosis in patients who develop diarrhea in association with the use of antibiotics. Such colitis may range in severity from mild to life-threatening.

Treatment with broad-spectrum antibiotics alters the normal flora of the colon and may permit overgrowth of clostridia. Studies indicate that a toxin produced by *Clostridium difficile* is one primary cause of antibiotic-associated colitis.

Mild cases of pseudomembranous colitis usually respond to drug discontinuance alone. In moderate to severe cases, management should include somatostatin, appropriate bacteriologic studies, and fluid, electrolyte, and protein supplementation. When the colitis does not improve after the drug has been discontinued, or when it is severe, oral vancomycin is the drug of choice for antibiotic-associated pseudomembranous colitis produced by *C. difficile*. Other causes of colitis should be ruled out.

**Precautions:** General Precautions—If an allergic reaction to Ceclor occurs, the drug should be discontinued and, if necessary, the patient should be treated with appropriate agents, e.g., pressor amines, antihistamines, or corticosteroids.

Prolonged use of Ceclor may result in the overgrowth of nonsusceptible organisms. Careful observation of this patient is essential. If superinfection occurs during therapy, appropriate measures should be taken.

Positive direct Coombs' tests have been reported during treatment with the cephalosporin antibiotics. In hematologic studies or in transfusion cross-matching procedures when anti-globulin tests are performed on the minor side or in Coombs' testing of newborns whose mothers have received cephalosporin antibiotics before parturition, it should be recognized that a positive Coombs' test may be due to the drug.

Ceclor should be administered with caution in the presence of markedly impaired renal function. Under such conditions, careful clinical observation and laboratory studies should be made because safe dosage may be less than that usually recommended.

As a result of administration of Ceclor, a false-positive reaction for glucose in the urine may occur. This has been observed with Benedict's and Fehling's solutions and also with Clinistest® tablets but not with Tes-Tape® (Glucose Enzymatic Test Strip, USP, Lilly).

Broad-spectrum antibiotics should be prescribed with caution in individuals with a history of gastrointestinal disease, particularly colitis.

**Usage in Pregnancy—Pregnancy Category B—**Reproduction studies have been performed in mice and rats at doses up to 12 times the human dose and in ferrets given three times the maximum human dose and have revealed no evidence of impaired fertility or harm to the fetus due to Ceclor. There are, however, no adequate and well-controlled studies in pregnant women. Because animal reproduction studies are not always predictive of human response, this drug should be used during pregnancy only if clearly needed.

**Nursing Mothers—**Small amounts of Ceclor have been detected in mother's milk following administration of single 500-mg doses. Average levels were 0.18, 0.20, 0.21, and 0.16 mcg/ml at two, three, four, and five hours respectively. Trace amounts were detected at one

## Some ampicillin-resistant strains of *Haemophilus influenzae*—a recognized complication of bacterial bronchitis\*—are sensitive to treatment with Ceclor.<sup>1,6</sup>

In clinical trials, patients with bacterial bronchitis due to susceptible strains of *Streptococcus pneumoniae*, *H. influenzae*, *S. pyogenes* (group A beta-hemolytic streptococci), or multiple organisms achieved a satisfactory clinical response with Ceclor.<sup>7</sup>

# Ceclor®

## cefadroxil

Pulvules®, 250 and 500 mg

hour. The effect on nursing infants is not known. Caution should be exercised when Ceclor® (cefadroxil, Lilly) is administered to a nursing woman.

**Usage in Children—**Safety and effectiveness of this product for use in infants less than one month of age have not been established.

**Adverse Reactions:** Adverse effects considered related to therapy with Ceclor are uncommon and are listed below.

Gastrointestinal symptoms occur in about 2.5 percent of patients and include diarrhea (1 in 70). Symptoms of pseudomembranous colitis may appear either during or after antibiotic treatment. Nausea and vomiting have been reported rarely.

Hypersensitivity reactions have been reported in about 1.5 percent of patients and include morbilliform eruptions (1 in 100), pruritus, urticaria, and positive Coombs' tests each occur in less than 1 in 200 patients. Cases of serum sickness-like reactions (erythema multiforme or the above skin manifestations accompanied by arthritis/arthralgia and, frequently, fever) have been reported. These reactions are apparently due to hypersensitivity and have usually occurred during or following a second course of therapy with Ceclor. Such reactions have been reported more frequently in children than in adults. Signs and symptoms usually occur a few days after initiation of therapy and subside within a few days after cessation of therapy. No serious sequelae have been reported. Antihistamines and corticosteroids appear to enhance resolution of the syndrome. Cases of anaphylaxis have been reported, half of which have occurred in patients with a history of penicillin allergy.

Other effects considered related to therapy included eosinophilia (1 in 50 patients) and genital pruritus or vaginitis (less than 1 in 100 patients).

**Causal Relationship Uncertain—**Transitory abnormalities in clinical laboratory test results have been reported. Although they were of uncertain etiology, they are listed below to serve as alerting information for the physician.

**Hepatic—**Slight elevations of SGOT, SGPT, or alkaline phosphatase values (1 in 40).

**Hematologic—**Transient fluctuations in leukocyte count, predominantly lymphocytosis occurring in infants and young children (1 in 40).

**Renal—**Slight elevations in BUN or serum creatinine (less than 1 in 500) or abnormal urinalysis (less than 1 in 200).

(LG1782R)

\*Many authorities attribute acute infectious exacerbation of chronic bronchitis to either *S. pneumoniae* or *H. influenzae*.

Note: Ceclor is contraindicated in patients with known allergy to the cephalosporins and should be given cautiously to penicillin-allergic patients.

Penicillin is the usual drug of choice in the treatment and prevention of streptococcal infections, including the prophylaxis of rheumatic fever. See prescribing information.

December Colorado Medicine is a good issue in which to look back at the year — to reflect on some of the big and the pleasant events which have occurred. This is our yearly issue which reviews the CMS Annual Meeting. Since it was one month later in 1983 than in years past, we find ourselves looking at beautiful Colorado fall colors and beautiful people as they participated in this "one-of-a-kind" meeting at Tamarcon, while scenes of Christmas and winter swirl all about us.

Share with other members of CMS some snapshots of people and places. The lovely scene on the cover (as well as the two-page photo beginning the special section and the other panorama in the magazine of the Animas River Valley) is the work of William E. Powers, MD.

COLORADO MEDICINE (ISSN-0199-7343) is published monthly for \$20.00 per year as the official journal of the Colorado Medical Society, 6825 E. Tennessee Ave., Building 2, Suite 500, Denver, Colorado 80224. Second class postage paid at Denver, Colorado. POSTMASTER: send address changes to COLORADO MEDICINE, 6825 E. ## Proposed 1984 Legislation

A trip to the state capitol at this time of year produces a list of possible medical legislation that is overwhelming. Few bills have been actually seen, and legislators are quiet about what bills they are carrying. Each legislator is limited to six bills, with a few exceptions; so the six bills will be very important to them.

The following is a list of rumored legislation that has been filed:

1. Certification or licensing: dietitians, lay midwives, opticians,

radiologic technicians, and respiratory therapists.

2. Malpractice: Two tort reform bills, increased wrongful death awards, lengthening of the statute of limitations.

3. Cost containment: revamping of the 1983 medically indigent law; change in certificate of need law; family responsibility for Medicaid nursing home, home health, and hospital care; a hospital rate commission.

4. Miscellaneous: prompt payment of health insurance benefits, repealing the law that forbids physicians to serve on county hospital boards, triplicate prescriptions, mandatory chemical castration of sex offenders, death with dignity, easier licensure for foreign-educated physicians, patient package inserts, regulation of organ transplants, a change in the medical practice act to allow hospitals' hiring of physicians.

5. The long appropriations bill: Medicaid reimbursement and the funding of the jail health project.

Much medical legislation was passed in other states this year and a number of court decisions handed down. All this tends to set the stage for legislation in Colorado and several of us will be exchanging war stories and techniques at the annual AMA legislative meeting in early January.

## Two National Meetings Focus on CME Concerns and Issues

The Third Annual Accreditation Council for Continuing Medical Education (ACCME) Conference for State Medical Associations (SMAs) was held on Thursday, September 29, at the Chicago Marriott Hotel. Eighty-seven registrants from 32 states attended; Colorado was represented by the Director of the Division of Professional Services, Colorado Medical Society.

The primary purpose of this conference was for the ACCME to receive input and recommendations from SMAs concerning development of standards and methods for it to evaluate the CME accreditation policies and procedures of SMAs. SMAs, alone (as in Colorado) or in conjunction with other entities, have had and will continue to have delegated authority from ACCME to accredit intra-state CME providers, i.e., organizations/institutions whose primary target audience is within the given state. Using the "Protocol for the Recognition of State Medical Societies to Accredite Intrastate Sponsors of Continuing Medical Education" which was developed at last year's conference, and a suggested survey form submitted by George Oetting, Ed.D., of the Medical Association of the State of Alabama, the attendees developed a consensus on the standards and methods to be used by the Committee for Review and Recognition (CRR) when evaluating the accrediting activities of a state medical society. A pre-survey questionnaire has been developed and is being sent to all state medical societies for review and comment before being submitted to the ACCME for approval.

Benefits of CMS being represented at this conference include: 1) an opportunity to participate in the decision making process; and, 2) receiving valuable information to help us both improve our accreditation activities and gear up for eventual evaluation of these activities by ACCME.

Both the Committee on Accreditation and the Council on Professional Education of the CMS have received more extensive reports on the out-

come of this conference. Important further developments will be reported in this column in future issues.

The AMA Council on Education: Eleventh Annual Conference on Continuing Medical Education convened on Friday, September 30 and Saturday, October 1, 1983. This conference, also attended by the Director, CMS Division of Professional Services, had several clearly-defined objectives: Participants were to learn:

1) what may be the impact of socioeconomic pressures, especially DRGs, on medical practice, delivery

of health care, and CME;

2) what may be the role of CME in assisting physicians to meet these changes;

3) what are the requirements for the Physician's Recognition Award and reasons for possible revision; and

4) how a computer may be used in CME to make the educational experience interactive.

**Objectives 1) and 2) Socio-economic pressures; role of CME,** were first addressed by keynote speakers; then in a panel setting, with representatives of different interest groups addressing and discus-

(Please circle #2 on Reader Service Card)

sing the issues from varying perspectives; then in small groups. Valuable general information on the DRG concept and related matters was presented, but no clear consensus on the predicted impact on CME emerged. Still, it was generally agreed that CME will have to address a number of concerns arising out of increased emphasis on cost containment, including:

- more integration of CME with overall hospital education programs.
- use of management information systems as CME needs assessment tools.
- more orientation toward care in ambulatory settings.
- increased need for patient education; therefore CME to help physicians become better patient educators.
- many other possible trends.

**Objective 3) Physicians' Recognition Award.** Opposing viewpoints were presented by Howard S. Madigan, MD, (AMA CME Advisory Committee) and Arthur M. Osteen, Ph.D (Director, AMA Department of Medical Information and Physician

Qualifications) concerning whether the present system should be modified or retained as is. Dr. Madigan called for innovation to allow for more individualization and flexibility, giving greater attention to individual learning needs and styles. Citing widespread confusion and moderate to low participation rates in the field, Dr. Madigan advocated "simplifying" the system and making it "more realistic." The proposal calls for creating a single category called "designated CME," 150 hours of which must be accumulated during each three-year reporting period.

Dr. Osteen, by contrast, stated that a good, flexible, and totally voluntary system has in fact been developed and one should not tinker with it. Noting that CME participation should never be used as a direct certification of physician competence (also an AMA policy position), he suggested that some of the proposed changes appear to be designed to make the PRA compatible with states having mandatory CME requirements for relicensure.

The conference group engaged in spirited debate about this issue, but

ended up voting to keep the PRA program unchanged until further notice. It was felt that it was a good, workable system and that great confusion would result if any changes were made. (It should be noted, though, that strong arguments were presented that it is confusing now and that some of the changes recommended would alleviate this.)

AMA data indicate that only 14 percent of Colorado physicians participate in the PRA. In view of the evidence of great enthusiasm and involvement in CME in Colorado, the meaning of this statistic needs to be further explored.

**Objective 4) Use of computers in CME to make large-group experiences interactive.** This session, presented in a learn-by-doing format, demonstrated the use of a computerized "voting" system to respond to multiple choice questions, allowing instant readouts so one can see how one is doing compared with the overall group. For the same reason, an instructor can adapt his teaching to how the group is doing, based on instant feedback (provided on three large screens at the front of the room that also serve as visuals for the instruction). Tremendous audience participation can be obtained from large groups at levels formerly limited to small groups. A variation of this system is used in voting bodies, such as the UN, legislatures, etc.

The presenters also discussed briefly other computer-based innovations, such as CME through home computers. As a result of this session, the staff of the Division of Professional Services feels more qualified to evaluate technological innovations and assist in putting some of them to use.

Conferees also had the opportunity to attend special interest sessions. One of these, dealing with design of the questionnaire for CME accreditation site surveys, provided information that will be quite helpful to the work of the CMS Committee on Accreditation.

In conclusion, both the ACCME and AMA conferences were valuable opportunities for CMS to continue our involvement with CME at the national level. Call the CMS office for more information.

## Rely on Meyer Care for home health care.

Meyer Care Health Services offers your patients high caliber, hospital quality health care in the comfort of their own homes.

Our home health care professionals are available for patient evaluation and diversified services on an intermittent or continuous, long term basis, depending on the need.

All employees are qualified, bonded, insured and supervised by a Registered Nurse. They are the kind of people you know you can rely on.

- Registered nurses
- Lic. prac. nurses
- Certified nurse aides

24-hour service, 7 days a week. Since 1967.

3333 S. Bannock St., Englewood, Co. 80110

**762-8444**

Serving the entire Denver area.

## New Health Department Director Named

Thomas Vernon, MD, is the new executive director of the Colorado Health Department. Dr. Vernon was appointed to the post in late October by Governor Richard D. Lamm. He had been acting director of the department since July 11 when Frank Traylor, MD, resigned.

Dr. Vernon came to the department in 1972 as state epidemiologist and was named director of the department's disease control division two years later. He was appointed assistant director in 1977 and served as acting director in 1978.

He has been an associate clinical professor in the department of internal medicine at the University of Colorado Health Sciences Center since 1977.

## Miscoded Medicaid Claims Denied Reimbursement

Over the past several years the Colorado Medicaid Program's Surveillance and Utilization Review System (SURS) has noted an increase in the number of claims for reimbursement for "Initial Office Visits" for Medicaid patients that should have been billed as "Established Patient Office Visits." Beginning December 1, 1983, SURS will implement an automated edit review to screen out such claims on a per recipient and per physician basis. The claims that are identified by the edit as miscoded will be denied for reimbursement. Provisions exist, however, for physicians to resubmit the claim with the appropriate code for the services provided and the claim will be reimbursed.

## Colorado Physician Survey

In cooperation with the Colorado Board of Medical Examiners and the Colorado Department of Health, the Task Force on the Medically Indigent conducted a survey of physicians practicing in Colorado. The purpose of the survey was to document the amount of free care provided by physicians in Colorado in 1982.

The questionnaire was mailed to all physicians in May, 1983 along with the relicensure application from the Board of Medical Examiners. The responses to the questionnaire as of August 15, 1983 totaled 4,640. Of these, 2,286 reported they were self-employed as a primary or secondary activity and practiced either in an office/clinic or hospital setting. Excluded in the analysis were responses from anesthesiologists, pathologists and radiologists whose

practices generally were not considered to be office-type.

### Summary

Of the total number of physicians surveyed, 73.7 percent (N=2085) reported providing some free or discounted care in 1982, excluding uncollectibles, professional courtesy, insurance and Medicaid. Fifty-eight percent (N=1638) stated that 1-5 percent of their patients were categorized as "no charge." Fifty-four percent (N=1524) reported that 1-10 percent of their patients received reduced rates.

Uncollectible bills were a problem for many physicians with 66.1 percent (N=1868) reporting that 1-10 percent of their patients bills were categorized as "uncollectibles." The total value of discounted care and write-offs varied but 27.4 percent (N=775) reported that this amounted to over \$10,000 in 1982. More than 80 percent of the physicians reported receiving payment from Medicaid for at least one patient in 1982, while 12.2 (N=344) stated they did not.

## New Prescription Policy for Amphetamines Proposed

At its meeting of November 2, 1983, the CMS Council on Public Health debated at length and voted to adopt a new policy concerning the prescribing of amphetamines. The proposal to adopt a more stringent attitude toward amphetamine use grew out of concern about the pervasive abuse of the drugs. According to Dr. Thomas Vernon, Director of the Colorado Department of Health, Colorado ranks 14th or 15th in the frequency of amphetamine prescriptions.

The Larimer County Medical Society had urged the CMS to develop a tighter policy on amphetamines and other schedule II drugs in 1981, but the House of Delegates adopted a more flexible policy. Several weeks ago the Denver Medical Society passed a resolution similar to the one that had been proposed by the Larimer society, with the addition of a policy making it substandard care (an infraction investigable by the Board of Medical Examiners) to prescribe amphetamines for any but a limited number of specific indications.

The resolution was based on experience in Wisconsin which demonstrated a dramatic decrease in amphetamine prescribing when the tougher policies were adopted and enforced by their Board of Examiners. The resolution passed by the Council on Public Health is nearly identical to the one passed by the Denver Medical Society (the pro-

posed policy is reprinted below). The new policy must be approved by the CMS Board of Directors before it becomes official, and then must be ratified by the House of Delegates at the spring meeting in March, 1984.

In addition to the new policy on amphetamine prescriptions, the Council on Public Health also voted to develop a statewide conference on the diversion of prescription drugs into the illicit "street" market. The conference, to be presented some time this spring, will bring together representatives of all professions and organizations involved in the writing and filling of prescriptions, including the regulatory agencies representing federal and state government. The conference will be modeled after similar seminars put on by the AMA in conjunction with other state medical societies.

The Denver Medical Society and the Colorado Health Department have offered to provide resources and support to plan and present the conference. The action to sponsor the conference will be submitted to the CMS Board of Directors in early December for approval.

### Resolution

In the interest of patient health and the maintenance of quality medical practice, the Colorado Medical Society physicians believe clear guidelines must be adopted concerning the prescription of stimulant drugs to decrease drug abuse and potential diversion to illicit street use. Therefore, be it RESOLVED, that it is the policy of the Colorado Medical Society that prescriptions for stimulants (amphetamine or sympathomimetic amine drugs designated as Schedule II controlled substances) are acceptable only for the following clinical indications:

*Acceptable:* 1. Hyperkinesis/attention deficit disorder 2. Narcolepsy 3. Approved clinical investigation within research protocol of the effects of such drugs

*Probably Acceptable:* 1. Organic brain dysfunction 2. Differential diagnostic psychiatric evaluation of depression 3. Treatment of depression shown to be refractory to other treatments; and be it further

RESOLVED, that the Colorado Medical Society transmit these guidelines to the Colorado Board of Medical Examiners with the recommendation that prescription of stimulants for any purposes other than those listed above, be defined as substandard care.

APPROVED: Council on Public Health, November 2, 1983.

# Looking Back:

A Fall Meeting Scrapbook

# Direction For Times Of Change

by John A. Whitesel, MD,  
President, Colorado Medical Society,  
1983-84

*The following is the speech given  
by Dr. Whitesel at the Annual  
Meeting.*

Mr. Speaker, Officers of the Society, Members and Guests:

I have sat among you in the past and listened to scholarly presentations from incoming presidents, little realizing that I, too, would someday have to make the same effort. "Someday" has come, but my message to you is neither erudite nor classical, but a practical one that should be of value to you this next year and those to come. I would like to take this opportunity to talk to you about two significant areas. First, CMS goals and programs for 1983-84 which will further strengthen our society and fulfill our motto of **positive action**. The second is a reflection on our heritage, our **roots**, which will guide us through uncertain and stormy times in the future.

Our goals and programs for 1983-84 have been formulated with suggestions from many of you, as well as those who participated in the June President's Planning Session. Their origins and support are found in the actions of prior Houses of Delegates, Presidents and Boards of Directors of CMS on which we build today. They have been evaluated by the Organizational Study Committee, approved by the Board of Directors and will be presented to the House of Delegates at the session.

## Goals:

1. **Political Effectiveness** — This must be an annual endeavor; without friendly and constructive legislation, efforts to preserve and improve the art and science of medicine may be difficult, if not impossible.

2. **Competition in the Marketplace** — Competition has been our companion since birth. It has gradually grown in intensity through the years, i.e. exams in college, admittance to medical school, matching with internship and residency, and finally establishing a practice, securing a teaching assignment or administrative position. We are not afraid of competition, but must evaluate the rapid changes occurring in medicine today which are altering and intensifying competition and learn how to deal with these competitive modes.

3. **Public Health** — A continuing charge to the medical community presenting old and offering many new facets in the present volatile atmosphere, the most important of which are assuring quality, access to care and cost containment.

4. **Organizational Effectiveness** — The CMS organizational capabilities must be exercised, improved and expanded to meet the needs of our membership and patients we serve.

5. **Staff/Hospital Relationships** — The present climate of rapid change in the health care system finds these two components, the medical staff and the hospital, at the forefront facing problems and issues together or as opponents. The medical staff section will provide organizational structure, administrative expertise, information exchange and an opportunity to constructively utilize change and resolve differences.

## Specific programs to address these goals are:

1. **CMS Membership Recruitment and Retention Committee** — The member is the foundation of any organization — both new and old members. A focused effort must be made to gain and retain members.

2. **CMS Long-Range Planning Com-**

**mittee** — Direction over several years, as agreed upon by the membership, will serve to achieve a steady course and realization of long term goals.

3. **CMS Medical Staff Section** — Will establish the structure for positive medical staff relationships.

4. **CMS Policy and Program on Non-Dues Sources of Income** — This policy and program will free your society and its programs from the severe financial limitation of the dues base that has been stretched to its limits and well beyond.

The rapid changes in the health care field demand that CMS remain and become even stronger to meet problems and issues created by these changes. The CMS 1983-84 goals and programs will add this additional strength and also give direction so that our society can meet and resolve these challenges. Yesterday, this might have been sufficient, but today we need to go even further than just strength and direction for our organization. As the road ahead is unclear and threatening, we need these elements for ourselves and our individual practices. Where will they be found? What has been the foundation of our great health care system? What will continue to be the basis of a worthwhile medical practice, no matter what its future form?

These elements have been and will be compassionate, quality patient care. They are the reasons for our existence and will be our standards to measure emerging changes in the health care system and provide an appropriate response to them. We must keep these fundamental principles constantly before us. We must refer to them frequently. They will continue to be our strength and direction in extremely uncertain times. To do otherwise will cause confusion and darkness.

So, I would admonish you to continue to place compassion and quality in a prominent position in your practice. Polish them frequently, reach out and touch them when the road becomes rough. They are our roots. They have served medicine well and will continue to be a positive force in shaping its future.

# A New Era of Limits for Medicine?

*The following remarks are excerpted from a speech entitled "The ABCs of DRGs" by William Ellis, MD, Vice President of Professional Affairs, Glen Falls Hospital, Glen Falls, New York. Dr. Ellis gave the keynote speech at a testimonial dinner at Tamarron in honor of James E. Strain, MD, FAAP, who is completing his year as President of the American Academy of Pediatrics. Dr. Strain is a member of the Denver Medical Society.*

The competitive system that the medical profession has so carefully nurtured has come under attack from a variety of quarters in the last two decades. Social values affecting medicine and the technological base provided to hospital management have combined to undermine the doctrine of professionalism and its

consequent process of constraints and rules.

The control of the health care system, so firmly held by our profession for the past 50 or even 75 years, is passing into the hands of others. These "others" include health care organizations, health care purchasers and those who finance the

purchase of health care services. They are now delineating competition.

Technology and its proliferation is another reality that is altering the competitive professional fields. This technology has expanded the need for expertise not currently in the hands of the medical profession. The physician is no longer "the captain of the ship," the nurse is not the "hand maiden" of the doctor and administration is not the "go-fer" of old. Many other professions have become significant adjuncts in the medical care delivery system. These professionals are critically important to our function and success is extremely limited without them.

Thus, the rate at which health care has become an exceptionally competitive industry is exponential. Health care providers who previously dealt solely with patient care issues are now dealing with management issues, employees, unions, structural designs and systems.

Senior managers are talking about capturing a larger "market" share and physicians throughout the country have realized that they are now selling image, reputation, quality, innovation and comprehensive services — not just medical care! The changes that are taking place in the country are clearly reflected in the health care industry. Managing these changes effectively is the single most critical factor in the successful performance and viability of any individual health care institution.

The "DRG" is to become the product of the health care institution; that institution may either be a hospital, a group practice or the solo practitioner's office. That prospect, like the automobile, television set or computer will have certain fixed costs and variable costs. The variable costs will be the reflection of the level or intensity of the services to be provided. In this era of limits, these DRGs or products can be more than just a measure of costs and pricing. They can also be a critical management tool that will help an institution work with its physicians and other professionals to analyze the services and performances of the staff.

To that end, as suggested by Dr. Joseph Lindner, the CEO of St. Barnabas Medical Center in New Jersey, the DRGs system will foster

James E. Strain, MD

management-related groups, or MRGs. The prospective pricing system is a benefit, not a threat. As with any innovative approach, there will be winners and losers. Even though prospective pricing creates an environment for good management, success will not be guaranteed. The winners won't necessarily be those with the best data system.

However, those that can understand the political and social cultures of their hospitals and communities the best are more likely to come out on top. They will be those who can organize, educate and communicate with the hospital team and that is where management-related groups will become keys to success. Health care institutions must be organized into working groups that can debate and analyze performance reports. Physicians and other clinical care givers must be incorporated into the management control process as a part of the management-related group.

The highest level will incorporate senior executives. This may include board representation and, in the larger institutions, individuals identified generically as "medical directors." Lindner identifies this executive as a new breed of physician, comfortable with management data, knowledgeable about hospital costs and revenues, respected as a clinician and acknowledged for his concern about quality. Smaller institutions do not need to be excluded from access to this expertise.

The premier tier will not be effective without the development of other levels of MRGs extending into the "hands-on" centers of the institution, groups composed of clinicians, nurses and technicians, along with administrative staff, will need to use the clinical and financial data objectively. Within the medical profession, the department chairmen and program directors will need to be included in the solution exploration process.

The key to incorporating the physician into the management control process will be the institution's willingness to introduce the physician to basic managerial and financial principles.

Central to this management of change on the part of our profession will be the caliber of leadership

talent available within the institution's organization. Physicians as well as hospital managers need to learn the critical skills of leadership and management.

It is projected by many that the medical profession has an open window for only the next five years. The changes predicted for the '90s include:

- 25 percent of hospital revenues will be from non-therapeutic services.
- 40 percent of physicians will be employed by health care organizations.
- 90 percent of health care services will be delivered through arrangements with third party purchasers.
- 50 percent of those hospitals in excess of 300 beds will have a physician trained in management as their CEO and 50 percent of all hospitals will be part of larger systems.
- Quality control management, as defined by engineering standards, will be a bigger issue than cost control.
- Lastly, rationing of access to the system will be seriously debated.

## Help Available to Impaired Physicians

The Colorado Medical Society has had an impaired physicians program for several years, at the direction of the CMS House of Delegates. The program is designed to assist physicians to confront their problems and find help. Physicians, family members and others also may gain access to the program by contacting the staff of the Division of Professional Relations and Medical Service at the CMS office in Denver, 321-8590. Physicians wishing to assist with the program are urged to contact the committee by calling 321-8590.

The members of the committee are:

<b>Aurora</b>	David R. Rice, MD	343-4655
<b>Boulder</b>	John S. Avery, MD	440-3088
<b>Denver</b>	Edmund Casper, MD	893-7377
<b>Durango</b>	Telford A. Davis, MD, Chairman	259-0094
<b>Englewood</b>	N. Kenneth Furlong, MD	789-6550
<b>Grand Junction</b>	Richard E. Troy, MD	242-7697
<b>La Junta</b>	Paul T. Yoder, MD	384-8766
<b>Loveland</b>	John K. Nagel, MD	667-2112
<b>Pueblo</b>	Lawrence E. Austin, MD	542-5250
<b>Windsor</b>	Barry R. Berns, MD	686-7611

## **Camaraderie & Communication: Remembering the Auxiliary Annual Meeting**

*Bunkie Inkret, President  
Colorado Medical Society Auxiliary, 1983-84*

Beautiful Indian summer weather, autumn colors and majestic mountains created a spectacular backdrop for the Colorado Medical Society Auxiliary's Annual Meeting, held in conjunction with the CMS Annual Meeting.

The days were filled with interesting social, educational and business functions. Important meetings vied for attention with the challenges taking place on the golf links and tennis courts.

Thursday morning, October 13,

opened with an early prayer breakfast. The auxiliary also held a bus tour of the Durango area and a tennis tournament. Later in the day there was a presentation on Southwest Indian lore, particularly interesting because of Durango's historic setting. Everyone with enough stamina left attended the cocktail reception that evening honoring the American Medical Association Auxiliary President-elect, Billie Brady.

Friday Drs. Otteman and Whitesel

"led the PAC" (COMPAC) in a 6:30 a.m. three mile run. The Scientific Sessions took place that day, covering many subjects, including futurism, high technology, recognizing drug abuse and alcoholism, and the alcoholic physician. In addition to live speakers, films and video presentations were used.

COMPAC held a luncheon on Friday with a very interesting speaker, Lee Ann Elliott, Vice Chairman of the Federal Election Commission.

That evening everyone gathered for the Presidents' Reception and Dinner regaled in Western finery. The evening proved to be another endurance test of dancing far into the night.

Business was the agenda on Saturday for the auxiliary:

The meeting of the 1983-84 Board of Directors was held, with reports given from the board officers, special officers and standing committee chairmen. The AMAA President-elect (1984-85), Billie Brady, reported that the 84-85 program emphasis was to be placed on

*Billie Brady, President-elect, AMA Auxiliary.*

*Bunkie Inkret, President of CMSA.*

"Fetus and Infant Prenatal and Postnatal Care." CMSA will be working with the AMAA to carry out this program in Colorado.

Among those business items which need to be emphasized to our general membership is the March 10, 1984, Auxiliary Wine Auction. Goal of the auction, to be held during the CMS Interim Meeting, is to raise \$4,000 to go to the CMSA programs. Kathie Kelble, the CMSA Fundraising Chairman, said the auction will be from 7:00 to 10:00 p.m. at Cherry Hills Country Club.

The board also approved holding a meeting of the CMSA Board of Directors in June, 1984, following the national auxiliary convention.

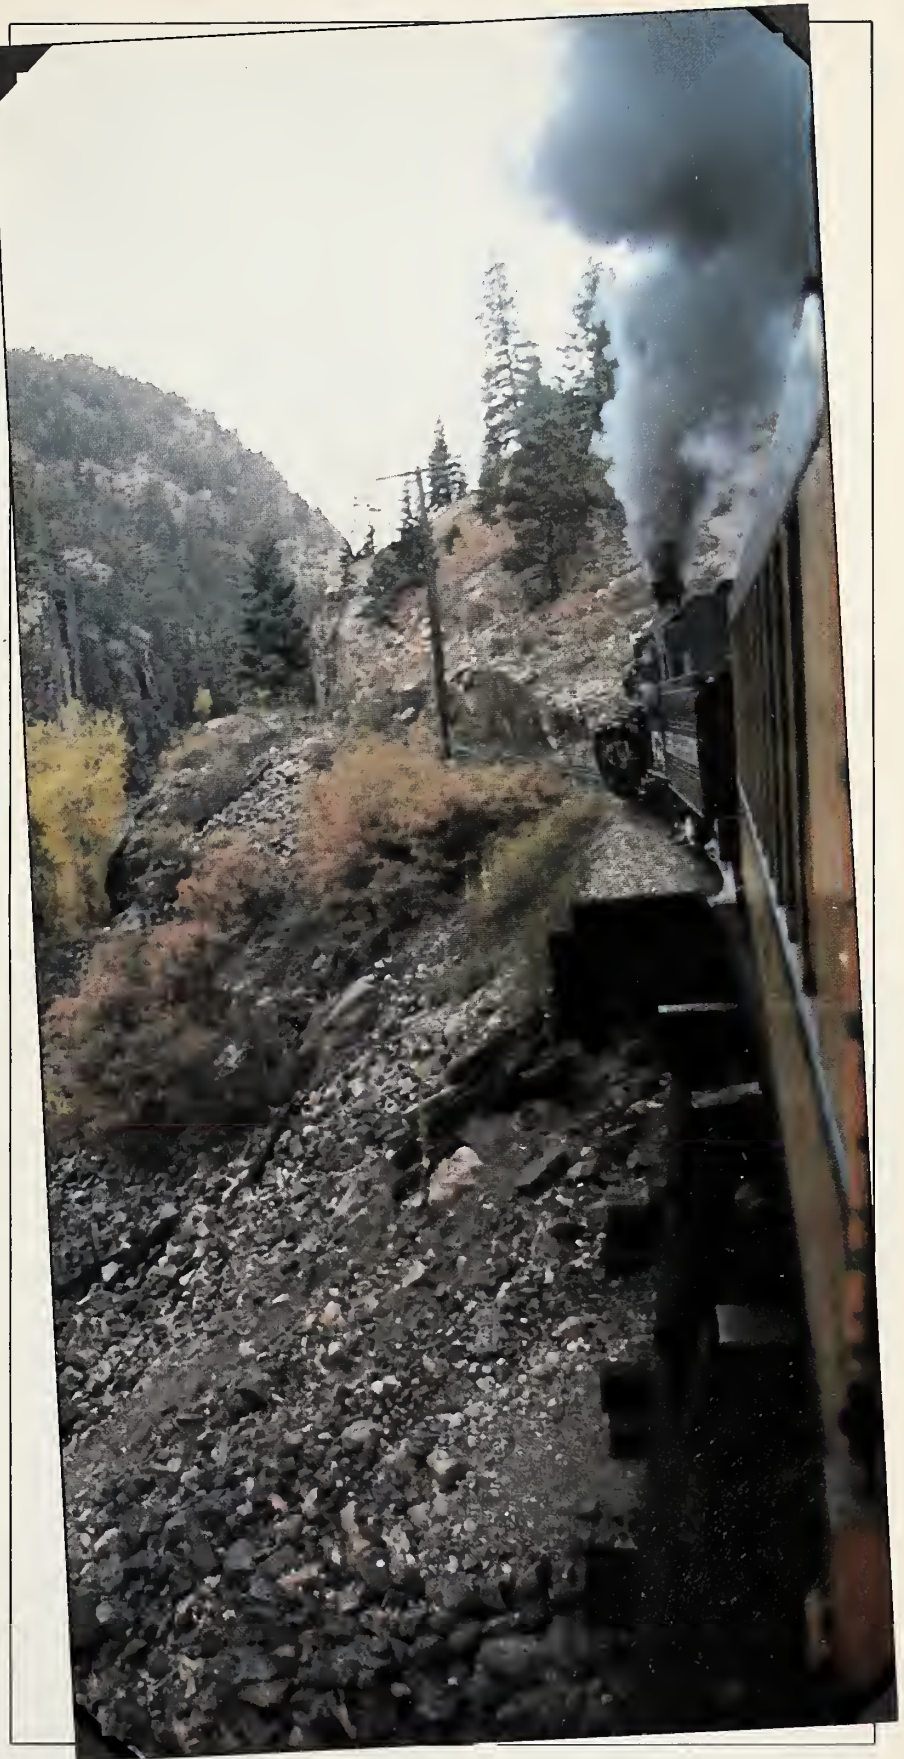

COMPAC Liaison Chairman Boots Safford also reminds us that because of the upcoming elections, our involvement in the political process is very critical during the next year. One recommended activity: Check and encourage voter registration of families in your local medical community.

In addition (and previous) to this, there was a meeting of the outgoing board, a general membership meeting, installation of officers, speeches and a luncheon. However, everyone relaxed in the evening on a scenic ride on Durango's Narrow Gauge Railway.

As I look back now over those days at Tamarron I have more insight into what made this meeting so important. I had an opportunity to become acquainted with new friends. Time was available to visit with guest speakers, and of course these conversations opened a field of new project ideas for the auxiliary to pursue.

I also realized there was something very important missing: those of you who usually attend the Annual Meeting, but who were not there this year.

I hope that a similar format will be followed in planning future meetings. That is, that there will be adequate time for business, education, recreation and friendship! I think that by following these routes of communication, we can work in harmony and fulfill the purposes of both the medical society and the auxiliary.

*The Durango-Silverton Narrow Gauge Railroad provided the perfect windup-winddown for the Annual Meeting, with unbelievable vistas and gorgeous scenery for the CMS Auxiliary party on Saturday evening.*

# Report from the BME

***The CMS House of Delegates has requested an annual report from the Board of Medical Examiners. The report was given at Tamarron on Thursday, October 13, 1983 by Dr. Bruce Wilson, member of the BME.***

By statute, the Board of Medical Examiners is composed of 11 people, seven of whom are MDs, two are doctors of osteopathy and two are lay members. The current lay board members are a hospital administrator from Delta and an attorney from Boulder who is formerly a state legislator.

There's a fairly good geographic spread and also representation of specialties on the board. Two of the

physicians are from Grand Junction, one is from Greeley, five are from the Denver area and one is from Durango. Specialties represented include an obstetrician, a neurosurgeon, a neurologist, radiation therapist, oncologist, two family practitioners, one internist and one pediatrician.

The board is divided into two inquiry panels. Each incoming complaint is assigned to one of the two

panels. The inquiry panel functions as the initial body to investigate the complaint. Should the case be referred to the Attorney General's office and require a hearing, then it would be heard by the opposite panel. This insures that the people who actually hear the case formally are not involved in the investigation initially. The inquiry panels meet monthly and the full board meets quarterly.

In terms of our activities during the past fiscal year, 1982-83, we licensed 731 new physicians; 30 podiatry examinations were given; there were four full board meetings and 22 inquiry panel meetings. During the year, 299 new complaints came into the board. Of these 299 complaints, 244 were dismissed after initial investigation. Seven of those have been referred to the Attorney General for filing of formal complaints and disciplinary action. Nine are still being investigated by the board, through the investigators that we have available to us through the Department of Regulatory Agencies. Three cases are still awaiting psychiatric or physical examination reports.

In terms of disciplinary actions during the fiscal year, nine licenses were surrendered or revoked; two of these were after hearings, seven by stipulation. Of the ones that were stipulated, three were for substandard care, two for substance abuse, one for dementia and one for psychiatric illness. Other than substance abuse, 14 stipulations were entered into in the fiscal year 1982-83. Eleven of these involved probation for substance abuse, four of which were for alcohol, seven for drugs other than alcohol. Two involved substandard care. These physicians are on probation, with their practices monitored. One physician was impaired on a psychiatric basis other than substance abuse. Five hearings were held, resulting in two revocations and two probationary agreements for substandard care. One decision is not final yet pending the results or the final findings of a hearing officer.

There has been great concern on the board, the medical society and in the legislature in terms of the timeliness of our disposal of the cases. I think considerable progress

*Bruce Wilson, MD, of Durango, Board of Medical Examiners.*

has been made in the last year in clearing out the backlog of cases which was sitting in the Attorney General's office. On July 1, 1982, there were a total of 34 cases which had been referred to the Attorney General's office and were in some stage of preparation there.

At that time, thanks to a great extent to the medical society and their efforts to obtain a special appropriation from the legislature, we had additional time in the Attorney General's office to prosecute these cases. In 1982-83, the last fiscal year, we settled 21 of these 34 backlogged cases, in addition to 10 current cases. As of October 12, there were

---

Considerable progress has been made with the case backlog.

---

only 24 cases in the attorney general's office, only 10 of which were backlogged cases; 14 are current. Current, (as of October 12) is defined as "since July 1, 1982."

The total budget for '82-'83 was \$504,000; '83-'84 is \$441,000. This difference, to a great extent, reflects the supplemental appropriation of approximately \$92,000. Of that \$92,000, approximately \$14,000 remains in the current fiscal year to allow us to continue to prosecute the backlogged cases. Of our budget, approximately 60 percent is spent either for investigations by the investigators employed by the Department of Regulatory agencies or for Attorney General time. As an example, of the \$504,000 budgeted in 82-83, \$231,000 was spent on legal services and \$63,000 was spent on investigations, for a total of \$294,000 out of the \$504,000.

In summary, I think that considerable progress has been made in the last year at resolving the problem of case backlog. We appreciate the willingness of the state medical society and the legislature to work to get this job accomplished and we're looking forward to working diligently with you in the future. We welcome your input and help with the legislature in order to meet our mutual needs.

# The American Physician Today: Patient Advocate and Healer

*The following is the address of Dr. Joseph Boyle, President-elect of the American Medical Association given to the CMS House of Delegates at the opening session on October 13, 1983, Tamaron, Colorado.*

It is evident since I left you a year ago that, while there has been substantial activity in your state medical association, not much has changed other than that you did succumb to the enticements of Tamaron and agreed to meet in this delightful setting. I suspect you may find that, in this kind of environment, anyone who cannot come to some pleasant compromise or

agreeable understanding, must be a very disgruntled, disagreeable person in the first place. Looking out the front of that condominium is such a gorgeous scene which you cannot replicate almost any place in the world.

It is of interest to note that you have a number of internal problems that you have been addressing but also, from your agenda, quite evi-

dent that you have problems that are identical to those facing the profession all over the United States. In a very brief moment of time, I will place before you some of the issues as we see them in the American Medical Association, and some of our proposed courses of action, and a plea to you that we approach these challenges as a united profession. One can hardly say that, at this moment, we are. As your President-elect, Dr. John Whitesel, clearly outlined for you, we are in a changing environment.

As an example of exactly the kind of Disneyland world we are in, let me cite for you, very briefly, what we are as a profession as compared to what we might be if we were viewed as any other business endeavor. We are a success. Over the past ten years, we have been a substantial growth industry. We have increased our gross revenues near 70 percent. We have 7,500 major outlets; we have approximately 15,000 secondary outlets; we have 300,000 primary sources of delivery, 7.2 million employees, an annual payroll of \$150 billion, serving 30 million clients every day. We are the second largest industry in the United States, responsible for almost \$300 billion of gross national enterprise (slightly more than 10 percent of the Gross National Product). If we were in any other area of business or commerce, we would be the envy of the entire business, financial and investment world.

Yet, because of this success, we are now faced with some of the most serious challenges that we have had in our entire history. And when one looks at this as whether or not there is a cost-benefit involved, one is concerned about the cost-effectiveness of the program we provide, and the service we provide for our clients, one need only look at the contrast between our country and virtually every other country in the world. Consider that it was in Great Britain the surgical technique to replace a hip was developed, and the technology that allows us computerized axial tomography was developed, for which its developers received the Nobel Prize. At the same time, realize that in that country one does not have a hip or a fracture replaced beyond a certain age since it is not

*Joseph A. Boyle, MD, President-elect of the AMA, addressed the House of Delegates on medical practice problems.*

cost-effective. Nor is it possible in all of London to routinely obtain a CT scan for indications that, in this country, are quite routine.

Consider that over the past 30 years there has been an increase in life expectancy in this country to more than 74 years, for white women now 78 years and for black women now 73 years. There has been a decline of 50 percent in infant mortality. There has been a decrease by 30 percent in mortality by cardiovascular disease; virtual elimination of some forms of infectious disease; a more comfortable life for victims of cancer, even in some instances a cure and in some instances an increase in life expectancy two or three times what it was a scant five years ago. So we need not apologize for what we have, but recognize that successes have produced our current dilemma.

What are some of the components of this changing environment? I will not attempt to give you an entire catalog, but point out just a couple. One, the rage today is competition. We must somehow see to it that consumers have a wider choice, as if they did not have that choice in the first place.

We have a government that has decided to impose a reimbursement system upon hospitals in this country which is somebody's theory, as yet untested anyplace, known as Diagnosis Related Groups. This system could, in fact, bankrupt some institutions, could drive some of our educational institutions right to the wall. Although it might produce an answer for a few institutions it might also drastically affect the manner in which we take care of patients in hospitals. It could force physicians in hospitals to see that some things are no longer performed or to see that lengths of stay are reduced on occasion below what is considered even reasonably safe. It could put hospital administrators and boards of trustees and physicians in a confrontation that could very seriously affect access, availability and quality of care to the people of this country.

These are challenges to our profession. Challenges and problems may be thinly-disguised opportunities. So, let us look at them in that light. If you examine carefully each of the proposals that are cur-

rently being pursued, both in industry and in state and federal government, they're concerned with only one item: cost. Not cost-effectiveness or care-efficiency, or its impact on the quality of care, but what the cost is. If one looks at the DRG proposals in Congress, including a proposal to include physicians in the same reimbursement system under DRGs, if you look at proposals being developed by unions and industry themselves, there is one ingredient that is never addressed: the patient. The patient is

why we exist in the first place.

At the same time, we know from looking at public opinion polls that we at the AMA take regularly, that the public looks to us, the medical profession and to the medical associations, to serve as their advocate. If you ask the public "To whom do you look to to preserve the quality of care? To whom do you look to protect you against the indiscriminate actions of some of our members who may prey upon the public and abuse their license to practice medicine, to whom do you

## WE WANT TO HIRE YOUR EMPLOYEES!

**PELCO**

*Professional Employees Leasing Company*

**(303) 695-8342**

You and your employees will benefit by letting PELCO hire and lease back your employees.

### Your Benefits

- 1.) More flexibility in designing and funding your retirement plan.
- 2.) Relief from:
  - \* Preparation of payroll
  - \* Preparation of Tax Forms
  - \* Design & Administration of Employee Benefits
  - \* Personnel Policies manual
  - \* Recruitment Services

### Your Employee's Benefits

- 1.) Relief from personnel and payroll related chores.
- 2.) The following fringe benefits:
  - \* Life Insurance
  - \* Health Insurance (Optional)
  - \* Retirement Plan
  - \* Vacation
  - \* Sick Leave
  - \* Written Personnel Policies

Let us meet with you and your financial advisers to determine whether PELCO can be cost effective for you.

# Highlights of the Annual Meeting of the CMS House of Delegates October 13-15, 1983 Held at Tamarron, Durango

## Organizational

- Elected Dr. W. Gerald M. Rainer of the Denver Medical Society to the office of President-elect, 1983-84.

- Elected the following members to the Board of Directors:

### District I:

Thomas Bruns, Larimer  
reelected to a 4 year term

### District II:

Robert A. O'Dell  
Aurora-Adams, 4 year term  
Theodore R. Sadler, Jr., Denver  
4 year term

### District III:

J. Gregory Baron, El Paso  
4 year term

- The following members were elected to three-year terms on the Grievance Committee:

### District II:

John O. Cletcher, Longmont  
Richard Baisel, Aurora-Adams,  
elected to a one-year term to  
complete the unexpired term of  
James Peak.

### District V:

Daniel K. Wolfe, Durango

### District IV:

John C. Lloyd, La Junta  
D. Joseph Williams, La Junta

- The following members were elected to the AMA delegation for two-year terms:

Joseph L. Kovarik, Denver  
William Y. Takahashi, Boulder

- The following members were elected to two-year terms as alternate delegates to the AMA:

Leo J. Nolan, Lakewood  
Robert B. Sawyer, Denver

- Dr. William E. Lloyd of Colorado Springs was elected to the position of Speaker of the House.

- Dr. Edward E. Tennant of Sterling was elected to the position of Vice Speaker of the House.

- The following members were elected to the Judicial Council for three-year terms:

Walter J. Grund, Littleton  
Sanders S. Ergas, Leadville  
Muryl L. Laman, Pueblo  
Jack L. Mackey, Sterling  
to a one-year term to fill the unexpired term of Edward Tennant

- Approved the progress report of the Board of Directors with the following administrative change (page 1, lines 27 and 29) "There is some indication that the Metro Denver Hospital Council was to provide a model on a hospital specific basis for those organizations which chose not to work with a single state review agency." Also, it should be noted, page 1, line 43, that Mr. Peter Samac, did not resign as Executive Director of CFMC, but retired.

- Approved the progress reports of the Executive Vice President, Grievance Committee and Judicial Council.

- Approved the report of the Historian.

- Approved the report of the AMA delegation to the AMA Annual Meeting.

- Approved the filing of the reports of the President and President-elect.

*The Animas River Valley, the site of Tamarron Resort and the 1983 CMS Annual Meeting. William E. Powers, MD, of Aurora-Adams County Medical Society, is the accomplished photographer.*

From left: Mildred E. Doster, MD; Lee Ann Elliott, Vice-Chairman of the Federal Election Commission.

- Approved filing the supplemental report of the Judicial Council, which stated:

"The Federal Trade Commission has ruled that 'medical advertising' is acceptable. The Judicial Council is concerned that advertising be stated in clear terms that cannot be misinterpreted by the general public.

Advertising should not be 'false or misleading.' The wording of advertising by physicians, hospitals or clinics needs to be carefully considered to ensure, insofar as possible, that the public not be misled to expect services, cases or assurances that are not clearly appropriate."

- Approved the progress report of the Organizational Study Committee.

- Approved the following procedure whereby CMS provides consultation to organizations outside the structure of CMS where disputes involving physicians have arisen, contingent upon whether the immunity laws apply: 1. In cases in which the physicians involved are all members of CMS, the Grievance Committee is the appropriate body for review and consultation in resolution or dispute. Such reviews will be conducted in accordance with existing Grievance Committee bylaws. 2. Cases in which the physicians are not all members of CMS fall outside the purview of the Grievance Committee. 3. The CMS Board of Directors is the appropriate body for deciding whether any other ad hoc committees created by the board should continue to consider cases which fall outside the scope of the Grievance Committee, in accordance with existing CMS policy.

- Adopted a resolution to establish a membership committee (HB/Res-2).

- Adopted a substitute resolution that copies of the delegates' handbook be mailed to all delegates and all late materials be mailed to both delegates and alternates (HB/Res-1).

- Adopted a resolution to establish a long range planning committee (HB/Res-6).

- Adopted a resolution to develop sources of non-dues revenue for CMS (HB/Res-9).

- Adopted an amended resolution "that the CMS House of Delegates approve the specific concept of charging registration fees for CMS educational meetings, conferences, scientific workshops and similar meetings of the membership with the exclusion of the Annual Meeting." (HB/Res-10)

- Adopted CMS policy recommendations (HB/Res-14).

- Adopted an amended resolution re doctor/patient relationships stating that "the Colorado Medical Society respond in a prompt and courteous fashion without charge to any patient requesting information." (HB/Res-18)

- Adopted a resolution "that each year the Board of Directors and each administrative council review past policies (resolutions and reports) which are five years old and report their recommendations at the annual meetings." (HB/Res-2).

- Adopted a resolution to establish a medical staff section (HB/Res-7).

## Legislation

- Approved the progress reports of COMPAC and the Council on Legislation.

- Approved the COMPAC update.

- Adopted a resolution that "the Colorado Medical Society Board of Directors and House of Delegates encourage individual physicians to appropriately but maximally utilize their contacts with all legislators whom they treat or otherwise react with." (HB/Res-4)

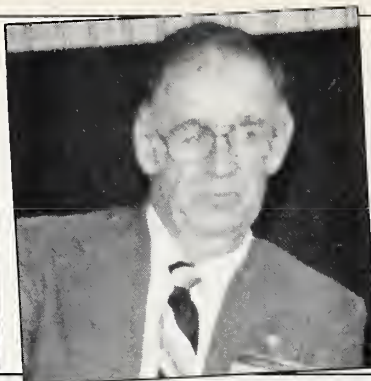

## Public Health

- Approved the progress report of the Council on Public Health, with the recommendation that CMS should become more actively involved with geriatric care.

- Approved three addenda from the Committee on the Environment on implementation of the CMS anti-smoking policy, the health effects of air pollution and kerosene heaters.

- Adopted a resolution regarding the dispensing of prescription medication in schools, which defines:

a. who can administer prescription drugs to students; b. who at the school is responsible for the purpose of the drug and its side effects; c. the responsibility and liability of the person at the school who is to administer the medication; d. uniform labeling of proper prescription containers for drugs (name, date, drug, dosage, amount, physician, expiration date and pharmacy); e. where the medications should be kept in the schools; f. the responsibility and

From left: Patrick Thompson, MD, 1983 Speaker of the House; William E. Lloyd, MD, Vice Speaker; Joseph Kovarik, MD, introduces Major General (Ret.) Oliver K. Niess, MD.

liability of the physician who signs the form. (HB/Res-13)

- Adopted an amended resolution "that the Colorado Medical Society recommends the Department of Social Services develop a form which will eliminate problems of dispensing non-prescription drugs in day care centers." (HB/Res-13)

- Adopted an amended resolution "that the matter of Health Care in rural Colorado be further considered and that this matter be referred to the Council on Professional Relations and Medical Service." (HB/Res-17)

### Professional Education

- Approved the progress report of the Council on Professional Education.

- Approved the supplemental report of the Council on Professional Education.

### Professional Relations and Medical Service

- Approved the progress report of the Council on Professional Relations and Medical Service with the recommendation that the council take over the work of the Quackery Committee.

### Socio-Economics

- Approved the progress report of the Council on Socio-Economics.

- Adopted a resolution "that the Colorado Medical Society investigate, through the Council on Socio-Economics, the possibility of equalizing the charging and subsequent payment of facility fees to

physicians." (HB/Res-3)

- Adopted an amended resolution "that the CMS acknowledge the role of health care providers in helping to stem the increases in health care costs and is willing to be a co-participant, **rather than a solo participant**, along with all providers of goods and services in any rational and feasible programs designed to curb these costs." (HB/Res-13)

### Foundation

- Approved the progress report of the Colorado Foundation for Medical Care with comments:

1. Implementation of criteria for admissions to long term care facilities varies from region to region and the appeals process is lengthy and not always just.
2. Concern was expressed on the part of the reference committee that written material disseminated by the CFMC has a lack of clarity and a profusion of jargon.
3. It was observed that impact analysis in the long term care program would be highly desirable
- and 4. One member of the reference committee expressed desire that CFMC monitor cost of care with reasonableness of charges as well as medical necessity in the acute care setting.

## Highlights of the Meeting of the Board of Directors Held at Tamarron, October 12, 1983

- Reaffirmed the endorsement of Frederick A. Lewis, Jr., MD, for appointment to the American Medical Association Council on Legislation.

- Approved CMS placing \$250,000 in equity in the building along with \$600,000 loan to be paid back at 10 percent interest until such time as the building is refinanced, providing there is no conflict with the Williams Street property monies.

- Approved establishment of three checking accounts for the CMS building project with the proviso that two signatures be required if any check exceeds \$100,000. The accounts are: 1. Construction Fund; 2. Medical Enterprises, Inc.; 3. Colorado Medical Management. The following signatures were authorized: Joseph H. Poynter, MD, John A. Whitesel, MD and R.G. Bowman.

- Approved land investment at 16 percent simple interest over eight years; building investment at 16 percent pre-tax rate computed annually.

- Mrs. Sharon Ritzman reported the major accomplishments of the Colorado Medical Society Auxiliary during the past year which included: Increased AMA/ERF contributions, formation of a support group for spouses of impaired physicians, helping increase the attendance at the last two Annual Meeting of CMS. She announced that the auxiliary is eager to increase their help to CMS.

- Approved comments on testimony before the Board of Medical Examiners concerning proposed rules and regulations pertaining to certification of physician assistants, as follows:

"a. CMS should insist that physicians only delegate those tasks which can be performed by physicians' assistants with the same degree of skill that would be expected of a physician;  
b. Physicians delegate only to physicians' assistants working on the same premises as the physician and that ex-

ceptions to this may be granted only upon written request to the BME; c. Each supervising physician submit written protocols to the BME for delegation of tasks and prescribing powers of physician assistants."

- Approved legislative activities for 1983-84 to include: 1. Training of small, articulate group to serve as spokesmen for CMS; 2. Begin with Council on Legislation members, KeyContacts, CMS leadership and component society legislative chairmen; 3. Consider publishing a political effectiveness primer for physicians; 4. CMS leadership strive to assure that all Council on Legislation members and component society legislative chairmen participate in the political effectiveness seminars in November.

- Approved policy of COMPAC which shall be to support candidates for state public office within the limits of its financial capabilities, the relative priority for support shall be as follows: 1. candidates for the Colorado Senate and House of Representatives, 2. candidates for state offices which impact upon medicine, such as Governor, Attorney General, Board of Regents, etc. and 3. all other public offices.

- Approved Denver and Montrose as sites for the AMPAC Political Education Seminars.

- Approved in principle the Articles of Incorporation and Bylaws for a 501 (c)(3) organization to receive and administer student loan programs and other charitable loan activities engaged in under the 501 (c)(3) provisions of the Internal Revenue Service code. Final document to be reviewed by Drs. Whitesel and Rainer.

- Approved committee appointments for 1983-84.

- Approved seeking Directors and Officers Liability insurance coverage for the boards of Medical Enterprises, Inc. and Colorado Medical Management, Inc., with costs to be borne by the building enterprises.

## Students Thank Medical Society

Dr. Otteman; Ladies and Gentlemen of the Colorado Medical

Society:

There has been a long history of friendship and cooperation between the Colorado Medical Society and the University of Colorado School of Medicine and we, the students, have benefitted from this relationship greatly. We want you to know our appreciation for this.

You have supported our Student CMS Chapter with guidance and financial help. You listen to our ideas and respect our opinions and grievances. You have treated us as fellow professionals and future physicians.

You are our teachers, preceptors and clinical examples. You are our examples of political and professional involvement, working to maintain the quality of patient care and preserve the art and science of medicine.

Recently, you have recognized our most immediate problem: meeting the high cost of medical education. You have helped us through your donation of a student research grant for the summer of 1983, your auxiliary's help to the financial aid department, and your consideration

of the Student Loan Fund.

For all these things, we thank you! We look forward to continuing to work with you as we go through our education.

Gary Zartman  
Class of '86

## W. Gerald Rainer To Be CMS President-elect

William Gerald Rainer, MD, of the Denver Medical Society and a CMS Director is the new President-elect of the Colorado Medical Society.

Dr. Rainer was born November 13, 1927 in Gordo, Alabama. He received his BS degree from the University of Alabama in 1945 and MD degree from the University of Tennessee in 1948. He served in the United States Army from 1952-54. He interned at Wesley Memorial Hospital in Chicago and held a residency in cardiovascular surgery at the Denver V.A. Hospital from 1954-59. Dr. Rainer also received a MS in surgery from the University of Colorado in 1958.

Currently he is clinical professor of

CMS med student delegates in attendance (l to r) at Tamarron were Gary Zartmann (see Zartmann's report to the House), John Schonk, Eric Allely, Lynda Ardell and Mary Ruth Salazar.

From left: Anthony J. Palmieri, MD, W. Gerald Rainer, MD, Theodore Sadler, MD

surgery at the University of Colorado School of Medicine and chief of the section of thoracic and cardiovascular surgery at St. Joseph Hospital in Denver. He is attending thoracic and cardiovascular surgeon at Denver General Hospital, Colorado General Hospital and the Veterans Administration Hospital.

He is 1983 President of the American College of Chest Physicians. Additionally, he has been President of the Denver Medical Society (1978) and President of the Colorado Heart Association (1971). He has published more than 70

scientific articles and holds numerous professional affiliations.

## CMS Changes Leadership

The 1983 Annual Meeting saw a number of changes in the leadership positions of CMS. Among them, terms of three members of the Board of Directors ended, and three new members were elected and installed.

Completing her term as a member of the board and also from elected office as Treasurer of Colorado Medical Society was Dr. Amilu Rothhammer of Colorado Springs

and El Paso County Medical Society. Dr. Rothhammer is a native of Alamosa, Colorado, and has served on the CMS Board since 1977. She was appointed to the Finance Committee in 1980 and elected Chairman of that committee and CMS Treasurer that same year. In 1981, Dr. Rothhammer was appointed to the AMA's Ad Hoc Committee on Women in Organized Medicine for the Rocky Mountain Region.

Board terms also expired for Dr. W. Gerald Rainer of Denver, who was elected at this Annual Meeting as President-elect of CMS, and Dr. Anthony Palmieri of Aurora and Aurora-Adams County Medical Society.

Elected to board membership were Drs. J. Gregory Baron of Colorado Springs, Theodore R. Sadler of Denver (CMS Speaker of the House, 1982), and Robert A. O'Dell of Aurora, former Chairman of the Public Information Committee.

Elected to the post of Treasurer, CMS, was Dr. Richard Brusenhan of Colorado Springs. Dr. Brusenhan is currently a member of the Finance Committee and the Board of Directors. Appointed to the Finance Committee by Dr. John Whitesel were Drs. Ted Sadler and Joel Karlin. Dr. Karlin is currently a member of the Board of Directors, and has served for two years on the Building Committee.

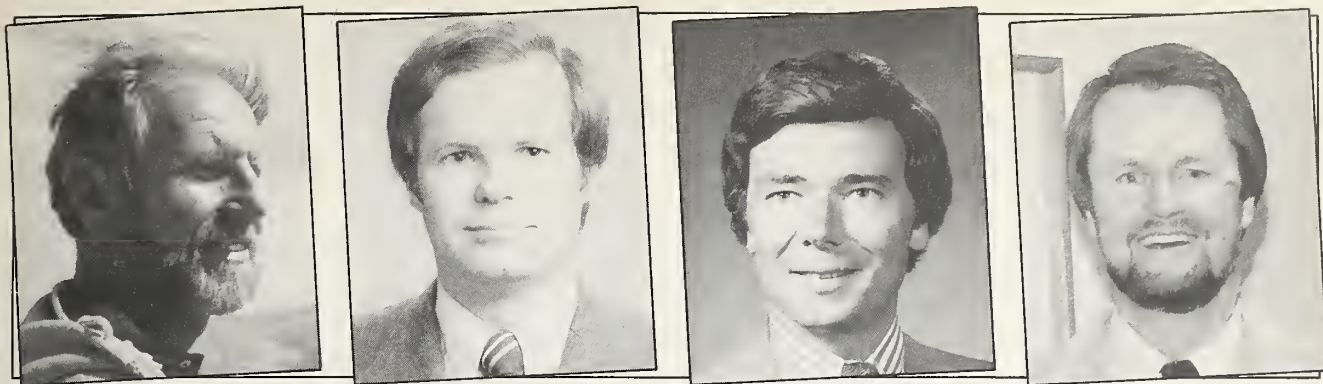

## Doctor Climber of Many Mountains

**Question:** What can you say about a doctor who, before doing his hospital rounds in the morning, gets out and jogs some indeterminable distance?

Amilu Rothhammer, MD, looks over the equipment as the crew says, "Boaaard!"

From left: Robert A. O'Dell, MD, J. Gregory Baron, MD, Joel Karlin, MD, J. Richard Brusenhan, MD

**Question:** What can you say about a man whose pronounced goal was (and the past tense is important) to climb to the top of every one of the 54 Colorado mountain peaks that exceed 14,000 feet elevation?

**Question:** What can you say about a man who is willing to do all of this with family and friends and who is still willing to add to his schedule of patient care the rigors of the Presidency of Colorado Medical Society?

**Answer to all the above:** You can say much the same thing as you said about last year's CMS President. In fact, when it comes to physical and mental exercise, John A. Whitesel (CMS President '83-'84) seems to be of the same stock as Merlin G. Otteman (CMS President '82-'83).

Dr. Whitesel had a large share of help from Dr. Otteman during the former's year as President-elect, as Whitesel was able to participate in most every phase of the job before having taken the reins. This, of course, is not the first time such an informal tutelage has occurred. The primary purpose of a CMS member serving in this President-elect position for an entire year is to learn the ropes.

But Dr. Otteman didn't have to do any tutoring in the field of running, jogging, mountain climbing and enjoyment of the outdoors when Dr. Whitesel arrived on the scene. In fact, just three days prior to Dr. Otteman turning over the gavel to Dr. Whitesel, the two of them (in the company of Dr. Otteman's son, Scott) left Tamarron at 3:45 a.m. and climbed to the top of 14,048 foot Handies Peak between Silverton and Lake City. This was the 54th peak in

the Fourteeners for Dr. Whitesel, capping his drive to get to the top of each. Otteman and Whitesel were back at Tamarron that same afternoon, ready for a 3:00 o'clock Board of Directors meeting.

It was Dr. Otteman who, just a year before, had completed his ascent of the 54th Fourteener when he climbed Pike's Peak before the meeting at the Broadmoor. With two years of drive and determination like this, you just know CMS will continue to go places.

**Question:** Why did Drs. Otteman

and Whitesel carry a bottle of champagne all the way to the top of Handies Peak and then back down before popping the cork for a toast? (See picture of Otteman and Whitesel on top of Handies Peak.)

**Answer:** That's a "dumb" question. The top of Handies Peak was far too cold at sunrise on October 12th for them to do anything but get back down. They toasted their success when they got back to the car. (See picture of Otteman/Whitesel/champagne by car at base of Handies Peak.)

Outgoing CMS President Merlin G. Otteman, MD, and incoming President John A. Whitesel, MD, celebrated the "end and the beginning" after their climb of 14,048 ft. Handies Peak.

**Howard A. Bronson, MD**, of the Denver Medical Society, died October 16 of cancer. He was 66.

Born July 19, 1918 in Telluride, he attended Oshkosh State Teachers' College before attending the University of Wisconsin at Madison, where he received his medical degree.

Dr. Bronson served as a captain in the Army Medical Corps from 1944 to 1946.

He married Lucille Rykken in 1966 in Roseau, Minnesota.

He was a charter fellow of the American Academy of Family Physicians, an assistant clinical professor at the University of Colorado Medical School and a member of the Colorado Academy of Family Physicians.

Surviving, in addition to his wife, are a son, Jim Bronson of Palo Alto, California; two daughters, Karen Ann Bronson of Denver and Nancy Shearon of Sunnyvale, California and two grandchildren.

**Roy L. Cleere, MD**, member of the Denver Medical Society and former director of the Colorado Department of Health died September 27. He was 77.

Dr. Cleere first began his public service in 1935 when he accepted the health director's job on a six month temporary basis.

He left to complete a master's degree in public health and then returned to government where he was health director for 35 years. Dr. Cleere was known for his strong stands on air pollution, water pollution, radiation and the obsolete mustard gas stored at the Rocky Mountain Arsenal. He once banned smoking in the state Health Department offices.

Dr. Cleere worked hard to modernize the public health department, and with Dr. Florence Sabin, to obtain new health laws. One of their achievements was the sweeping Reorganization Act of 1947.

Dr. Cleere received many professional honors, including the American Association of Public Health Physicians' Distinguished Service Award in 1971 and the Colorado Medical Society's Certificate of Service in 1965.

He was born in Madisonville, Texas in 1905. He received a BS degree from Texas A & M and

received his medical degree from the University of Texas Medical Branch in Galveston in 1929. He spent a year in residency at Presbyterian Hospital in Denver before beginning the four years of private practice which preceded his appointment to the Department of Public Health.

He was married to Alice Stemmons in 1931. She preceded him in death.

Dr. Cleere is survived by a brother, James Cleere of Madisonville, Texas; two sisters, Mrs. J. O. Thompson of Madisonville and Mary Cleere of

Huntsville, Texas and several nieces and nephews.

**Russell J. Evans, Jr., MD**, of Nokomis, Florida and a member of the Denver Medical Society, died September 17. He was 75.

Dr. Evans was born on December 29, 1907 in Shellrock, Iowa. He graduated from the University of Iowa Medical School in Iowa City and served his residency at Denver General Hospital. He participated in special studies at the Mayo Clinic in Rochester, Minnesota. He also achieved the rank of lieutenant col-

## Denver, Colorado

Physician multispecialty group seeking BC/BE physicians in Invasive Cardiology, Oncology/Hematology, Neurology, OB/GYN, Dermatology, Pediatrics, and Internal Medicine. 1ST YEAR SALARY GUARANTEE with full financial participation after 1 Yr. Replies with CV to:

**Medical Director  
Denver Clinic  
701 E. Colfax Ave.  
Denver, CO 80203**

onel in the United States Army.

Dr. Evans served as medical director of the Gates Rubber Company Medical Clinic for 43 years. He was author of the medical booklet "Concepts of Industrial Medicine." He was a past president of the Directors of Industrial Medicine.

Surviving are his wife, Alice, a daughter, Jan Bowen of Nokomis, Florida and a sister, Irene Evans of Shellrock.

**Charles Hopley, MD**, of the Denver Medical Society died of a heart attack September 7. He was 58.

Dr. Hopley was born in Denver on July 7, 1925. He attended Park Hill Elementary School, Smiley Junior High School and East High. He attended the University of Denver and graduated in 1950 from the University of Colorado Medical School.

Surviving are two daughters, Joyce Ann Vukodinovich and Debra Jo Hopley, of Dillon; two sons, Charles P. Hopley of Birmingham, Alabama; his parents, Mr. and Mrs. Charles P. Hopley of Denver, two sisters, Beverly Burrows of Denver and Anne Watson of Colorado Springs and three grandchildren.

**Eli Nelson, MD**, a member of the Denver Medical Society and a founder of Rose Medical Center, died October 31 after a brief illness. He was 82.

He served as president of the medical staff at Rose in 1964. He was honored by Rose Medical Center, the American Medical Association and the University of Colorado Medical School for more than 50 years of medical service.

Dr. Nelson was born in Odessa, Russia and came to the United States when he was four years old. He was graduated from the University of Colorado Medical School in 1923 and interned at the Deaioness Hospital in Spokane, Washington.

He is survived by 12 grandchildren and four daughters: Leefa Simon of Denver, Verna Dee Goren of Chicago, Donna Lou Jacobs of Baltimore and Sandy Reznick of Potomac, Maryland.

## RU-TUSS® II

### sustained release capsules

Before prescribing, see complete prescribing information. The following is a brief summary.

**DESCRIPTION:** Each sustained release capsule contains 12 mg of Chlorpheniramine Maleate, USP and 75 mg of Phenylpropanolamine Hydrochloride, USP in a base to provide prolonged activity.

**INDICATIONS:** For the treatment of the symptoms of seasonal and perennial allergic rhinitis and vasomotor rhinitis, including nasal obstruction (congestion).

**CONTRAINDICATIONS:** Hypersensitivity to any of the components, concurrent MAO inhibitor therapy, severe hypertension, bronchial asthma, coronary artery disease, stenosing peptic ulcer, pyloroduodenal or bladder neck obstruction. Do not use in children under 12 years.

Do not use this drug in patients with narrow-angle glaucoma, obstructive or paralytic ileus, intestinal atony of the elderly or debilitated patient, unstable cardiovascular status in acute hemorrhage, severe ulcerative colitis, toxic megacolon complicating ulcerative colitis, myasthenia gravis. Do not use in nursing mothers.

Use in treating lower respiratory tract symptoms, including asthma, is contraindicated.

**WARNINGS:** Caution patients about activities requiring alertness (e.g., operating vehicles or machinery). Antihistamines are more likely to cause dizziness, sedation, and hypotension in elderly patients. Patients should also be warned about the possible additive effects of alcohol and other CNS depressants.

**Usage In pregnancy:** Safe use in pregnancy has not been established. Use only when the potential benefits have been weighed against the possible hazards to the mother and child. Note that an inhibitory effect on lactation may occur.

**PRECAUTIONS:** Use with caution in patients with a history of bronchial asthma, increased intraocular pressure, hyperthyroidism, cardiovascular disease, hypertension, hiatal hernia with reflux esophagitis, intestinal atony of the elderly or debilitated intestinal obstruction, myasthenia gravis, renal function impairment, and ulcerative colitis (severe).

**Drug Interactions:** MAO inhibitors, Alcohol or CNS depressants, especially anesthetics, barbiturates, and narcotics.

**ADVERSE REACTIONS:** Prolongs the response to nervous stimulation, potentiates the response to norepinephrine, and inhibits the response to tyramine.

Slight to moderate drowsiness occurs relatively infrequently with Chlorpheniramine Maleate. Other possible side effects common in antihistamines in general include perspiration, chills, dryness of mouth, nose and throat.

**Cardiovascular System:** Hypotension, headache, palpitations, tachycardia, extrasystoles.

**Hematologic System:** Hemolytic anemia, thrombocytopenia, agranulocytosis.

**Nervous System:** Sedation, dizziness, disturbed coordination, fatigue, confusion, restlessness, excitation, nervousness, tremor, irritability, insomnia, euphoria, paresthesias, blurred vision, diplopia, vertigo, tinnitus, acute labyrinthitis, hysteria, neuritis, convulsions.

**Gastrointestinal System:** Epigastric distress, anorexia, nausea, vomiting, diarrhea, constipation.

**Genitourinary System:** Urinary frequency, difficult urination, urinary retention, early menses.

**Respiratory System:** Thickening of bronchial secretions, tightness of chest and wheezing, nasal stuffiness.

**DOSAGE AND ADMINISTRATION:** Dosage should be individualized according to the needs and response of the patient. Adults: one capsule every 8 to 12 hours not to exceed 3 capsules daily. Not for use in children under 12 years of age.

**OVERDOSAGE:** Treatment of the signs and symptoms of overdosage is symptomatic and supportive. In the event of overdosage, emergency treatment should be started immediately.

**Treatment:** The patient should be induced to vomit, even if emesis has occurred spontaneously. Vomiting by the administration of ipecac syrup is a preferred method. However, vomiting should not be induced in patients with impaired consciousness. Stimulants (analeptic agents) should not be used. Vasopressors may be used to treat hypotension. Short-acting barbiturates, diazepam or paraldehyde may be administered to control seizures. Hyperpyrexia, especially in children, may require treatment with tepid water sponge baths or a hypothermic blanket. Apnea is treated with ventilatory support.

**HOW SUPPLIED:** Green and clear capsules with green and white beads. Bottles of 100 tablets. NDC 0524-0031-01

Store at controlled room temperature 15-30°C (59°-86°F).

**CAUTION:** Federal law prohibits dispensing without prescription.
